

**Limitations:** The adverse event and product problem reports contained in this record are not necessarily causally related to (caused by) the reported product, nor do they mean the product was defective. Consumer complaints involving animal foods are received by FDA through voluntary reporting systems. Not all reports undergo follow up actions by FDA; however, each report received is important to FDA as part of our ongoing surveillance efforts related to pet food safety. Trends in reporting can provide an early warning of emerging safety issues of concern.

Other limitations:

- For any given report, there is no certainty that the reported pet food caused the adverse event. The adverse event(s) reported may be more related to an underlying disease, condition, or concomitantly administered medication.
- The report narratives are provided in the form in which we received them, the quality of the information provided about the adverse event/product problem is dependent on the quality of the information received from the veterinarian and/or pet owner.
- Adverse event report numbers should not be used to calculate incidence rates or measures of relative risk. It is not data from a controlled study, and there is no accurate way to know the true size of the population exposed to a product, nor the true population affected with an adverse event.
- Adverse event data should not be used to compare the safety of different products. Many factors can influence reporting, and products that are more widely distributed or sold in greater volume may have more reporting than those with limited distribution or sales. Products for which there has been recent publicity may experience more reporting for a period of time afterwards. Underreporting is also common with adverse event reporting systems.

<a href="#">EON-352496</a>	4/30/2018 21:28	Retriever High Protein	In 2017 we didn't think it would be an issue to switch over to a cheaper dog food. I was naive and I thought if it was on the shelves it must be safe. Shortly after switching to this brand of dog food my miniature schnauzer became very ill. We brought her to the vet and had labs run that couldn't give us any real answers and she passed away two days later. We had stopped feeding both of our dogs the new food shortly after we noticed them getting sick. Our larger pit mix was becoming ill as well but was not as affected as quickly, I am assuming because she is a larger dog. Shortly after our first dog passed, our pit mix started to go down hill fast with lumps that are "worrisome and needing to be removed" per our vet. Likely cancerous. Our dogs were both in great health until we fed them this food. We are devastated.	10	Years	Schnauzer - Miniature	Dog		
<a href="#">EON-352481</a>	4/30/2018 17:24	Golden Rewards Chicken Jerky Recipe	(b) (6) had been receiving a Golden Rewards Chicken Jerky treat daily for approximately 30 days. My husband had purchased a small bag initially, but recently purchased the 32oz. bag UPC 8113112585 Best if used by: 7/4/19 H0844 00518 505. This was purchased at Walmart store (b) (6) on April 26, 2018. I noticed on 4/28/18 that (b) (6) was not excited about eating. He would stare at his bowl, walk away and required a great deal of encouragement to eat. He would not finish his food, which is highly unusual!!! Today he was lethargic, very quiet, disinterested in food. I coaxed him to eat come cooked rice with broth which he vomited up about 2 hours later. He is drinking more water than usual. I did call our vet to report the situation and ask for recommendations. I was instructed to not feed him anymore of those treats (already done!) and to watch him for 24 -36 hours. If no improvement to call for an appointment.	6	Years	Retriever - Labrador	Dog	65	Pound
<a href="#">EON-352434</a>	4/30/2018 13:00	Victor Active Dog & Puppy Formula Grain-Free Dry Dog Food	My dog eats Victor Active Puppy & Dog Food. The dog food is kept in the bag and the bag is put into a simple human pet food storage container. Saturday morning 04/28/2018 while feeding my dog there was what appears to be a white plastic toothpick in the scoop of dog food. I contacted Victor and was very underwhelmed with their response. It seemed like all they wanted to do was say that it happened at my house (which we don't even have these types of toothpicks in our house) or during shipping. I Just don't want to see a Dog injured by injecting a piece of plastic. I would like to see the company thoroughly look into the issue. When I called Victor they didn't even ask for the Lot # until I asked them if they wanted that information!						

<a href="#">EON-352365</a>	4/30/2018 7:24	Purina Fancy Feast Grilled Turkey with Gravy	Cat was refusing Fancy Feast after a certain Best By date as per my previous report. Trial and error found a food of the same variety, make and flavor that she would eat. It is the only canned food she will eat. Seems that she would eat Best By March 1919. After a short while on this food we had problems. Changes in behavior, lethargy, diahorrea. Have submitted stool sample to vet and will be consulting Wednesday.	7	Years	Domestic Longhair	Cat	10	Pound
<a href="#">EON-352356</a>	4/29/2018 22:52	Rachael Ray Nutrish Grain Free dog food	Severe, Vomiting, diarrhea, loss of appetite, weight loss. After x-rays and blood work showed everything was within normal range she was put on antibiotics and has finally begun to recover.	10	Years	Retriever - Labrador	Dog	70	Pound
<a href="#">EON-352339</a>	4/29/2018 12:40	Pedigree Adult Complete Nutrition Roasted chicken rice & Vegetable flavor	I purchased a 55 lb bag of Pedigree dry dog food and found it smelled off. It doesn't have the normal dog food smell. My dog does not want to eat it. I tried using my roommate's dog food (also Pedigree without the smell) and he ate right away. He is a Husky mix and has been eating this food for years without a problem. (My roommate has a Rat Terrier who eats the small bites.) The best "before date" is October 2018.						
<a href="#">EON-352308</a>	4/28/2018 16:00	Organix pristine wild-caught salmon recipe	I bought organix pristine wild-caught salmon treats for my dog from a local pet smart. The following 2 days after giving my dog the treats he fell ill, symptoms included bloody loose stool, bloated stomach, straining to deficate, loss of appetite and lethargy	2	Years	Other Canine/dog	Dog	10	Pound
<a href="#">EON-352301</a>	4/28/2018 13:00	DARWIN Natural Selections Turkey	I feed my dog DARWIN Natural Selections Turkey. I currently have lot numbers 44817 and 45327 in my freezer; lot number 45327 is what made my dog ill. He developed violent projectile diarrhea on Thursday 19 April 2018, and was unable to walk or stand by Saturday 21 April. (b) (6) at (b) (6) hospital in (b) (6) treated my dog over the course of three days. She will verify that my dog was DEATHLY ILL because of bacteria from DARWIN dog food.	4	Years	Terrier - Boston	Dog	18	Pound

<a href="#">EON-352296</a>	4/28/2018 11:40	Purina waggin Train Chicken Jerky Tenders Delicious Breast of Real Chicken	She seemed to not want to eat all of the sudden we only have the dogs one treat daily but because she was the big dog she got treat and a half. They all exhibited signs of urinating more often my other small yorkie vomited more he has a sensitive stomach didn't put the two together until the 2nd time around and it was to late she died. Her 1st episode thou we were able to take her to the vet she had seizures, stopped eating and drinking and when he did a blood and work up on her she was healthy other than kidney issues which he had no explanation for as she was a healthy dog last he saw her. He kept her for a week in iv fluids and gave her antibiotics we brought her home and she got better put her weight back on. I made the mistake of giving her a treat 2 months later she didn't want to eat, I thought it was her food and I gave her a half treat she liked them she ate it she only got worse. She drank a bunch of water initially but stopped just prior to having her 1st seizure, we called the vet it was the other vet we told him what was happening it was late in the day he said to keep her calm and bring her in in the morning. She only continued to have seizures she was much worse than last time. It appears that the stress of what she went through was to resent at about 4am the following morning she passed away. This all happened from (b) (6) - (b) (6) We did not think to keep her body for any testing as we didn't think that these treats were the cause of anything. But after she does we have them to the other dogs they to got sick just not to this extreme. We stopped giving them these immediatly. We do have all her records and blood work from previous visits and from this the January episode. I will forward our concerns to our Vet and see what he thinks. Regardless of the outcome we are certainly saddened that these products are still offered to pet owners. With the high number of losses and not only of their lives but the illness they suffer. This is extremely expensive and heartbreaking for families to go through why these have not been permanently removed from the market shocks me to the core. If there had been this amount of life loss in people you would remove them. Please take action.	12	Years	Mixed (Dog)	Dog	45	Pound

<a href="#">EON-352110</a>	4/25/2018 17:12	Purina Friskies Pate Mariner's Catch	I have an ongoing problem with Friskies Mariners Catch pate cat food. I frequently find "objects" in the food that are hard, white and large enough to be choke hazards. As many as 20 in one can. I have also found completely intact claws several times. I have contacted Friskies several times and even sent samples of these objects, in Friskies sent envelopes, twice. Their response was "normal ingredients". Yesterday I found another claw measuring 5/8 inch in length. I have a picture of the claw next to a ruler and the can of Friskies in which the claw was found. I spend time picking through the food each meal to pull out these objects but I don't get them all and I have seen my cats get an object stuck in their mouths and/or try to spit the object out numerous times. Last year, 2017, when I repeatedly complained and determined all the cans were from the same processing plant, I was told there is a regulation as to the size ingredients must be ground to. Clearly, this Friskies processing plant is not complying with that regulation. Additionally, what species do these claws come from? Here is the stamped information on the bottom of the most recent can with the claw: Best Before Jan 2020 80171159 L63820553 I have heard from another source, that pate food and Friskies pate in particular have copious complaints about this problem. Clearly, we need FDA's help to make this manufacturer comply

<a href="#">EON-351980</a>	4/23/2018 23:24	Wild Calling - Inland Waters - Can Cat Food	Feed him the food, he ate very little, 2-3 mouthfuls. He walked to the other side of the kitchen and vomited twice. The amount he ate, came right back up, thank goodness, because if there's something wrong with it, I'd sooner him not keep it down. I lifted the food up immediately, and put it back in the can.	12	Years	Domestic Mediumhair	Cat	9	Pound

<a href="#">EON-351976</a>	4/23/2018 20:36	Dingo Mini Chip Twists 14 Pack	Not to be an alarmist but, after giving a Dingo Mini Chip Twist treat to each of my dogs (one 10.5 years, one 6.5 months), they both stopped eating, became lethargic, and developed diarrhea within 24 hours, simultaneously. As they eat different kibble and do not have access to each other's food, this is the only common thing they both ingested that was new in our home. Each ate only part of the treat, and I threw the uneaten portions in the trash as soon as they began acting sickly. The diarrhea was gelatinous in consistency and had bright red matter in it--the same color as the red strips lining each mini chip twist. The puppy was sick for about 2-3 days, and the senior dog was sick for about 5-6 days, and also had vomiting. Today, I sent a message via <a href="http://www.dingobrand.com">www.dingobrand.com</a> to alert them to this possible issue and offered to provide them with packaging information, but have yet to receive a response.	6.5	Months	Japanese Chin (Spaniel)	Dog	7	Pound
<a href="#">EON-351975</a>	4/23/2018 20:36	fancy feast tender liver & chicken pate, fancy feast seafood feast in gravy grilled, fancy feast cod sole & shrimp classic pate, fancy feast turkey feast in gravy grilled	Something is wrong with the fancy feast canned food. my cats have been eating it since 2005 when I got my permit for 32 cats. After being feed last night cats began violently vomiting food and water. I have not feed them fancy feast today because i noticed some of the cans i open appear to have a yellow mucous coating on top and smell bad. other cans appear to have dry flakes even though the food is suppose to be wet. The food also smelled badly. I contacted purina who offered a refund on the 4 cases of 24 cans I purchased but I am concerned something is wrong with the cans and don't want other cats to get sick from it. Since I have refused to feed them the fancy feast today, I don't know their condition.I am feeding them boiled chicken and rice to hopefully settle their stomach and giving them famotadine per vet's instructions. I also want to note, that I also take care of TNR feral colonies outside and those feral cats won't even eat the food when i put it down for them			Mixed (Cat)	Cat

<a href="#">EON-351927</a>	4/23/2018 13:24	Dick Van Pattens L.I.D. Natural Balance Lamb meal and brown rice formula.	He started on a new bag of dog food. Dick Van Pattens L.I.D. Natural balance lamb meal and brown rice formula. It's the same brand/formula he has eaten since 9 weeks old. The morning (04-21-18) after his evening meal he had diarrhea, that continued until 04-22-18 afternoon when he vomited. He ate evening meal on 4-22 and vomited 3 times during the night. The vomit looked like his food. He is an indoor dog, doesn't mingle with other dogs, is very active fetching and walking, has regular vet visits, and is well within his weight at 48 lbs.	2	Years	Mixed (Dog)	Dog	48	Pound

<a href="#">EON-351879</a>	4/23/2018 10:44	Blue Buffalo Basics salmon and potato dry food - regular and grain-free:	<p>Reported as RFR (EON-351747). FDA CVM resubmitting as PFR. 7 year old castrated male Doberman pinscher with DCM. Has been eating Blue Buffalo Basics salmon and potato dry food since 2012 (rotates between regular and grain free version of this diet). Recently, diagnosed with DCM and whole blood taurine was 29 nmol/ml. Started on cardiac medications by RDVM and just started taurine and fish oil (may also start L-carnitine and coenzyme Q10). Unclear if taurine deficiency-related DCM or related to current concerns with "grain free" diets.</p> <p>DCM and taurine deficiency Owner has bag of food that she's keeping until we hear from you. RDVM is (b) (6) , (b) (6) Veterinary Hospital</p>	7	Years	Doberman Pinscher	Dog		
<a href="#">EON-351867</a>	4/23/2018 8:20	Purina Fancy Feast.	<p>After 5 years of eating Purina Fancy Feast, my cat will now flat refuse it without even tasting it. The problem seems to be after a best before date of 2018. I have given the cat the older food and she will eat it without problem. If I give her the new then she refuses it point blank. I have repeated this several times after scouring the stores for all the best before months I could find.</p> <p>I have searched the cat forums and review sites and there are many, many people saying the same thing.</p> <p>I reported the matter to Purina and gave them batch numbers of affected cans. At first they denied any changes to the product, but they now admit that the formula has been changed.</p> <p>In my opinion, the cat is the expert and will not eat tainted food. I tend to be cautious and would rather head off a problem now than face the death or illness of pets later. Of course Purina won't listen to me. I knew there was a problem and lo and behold they admit they have changed the food. It may be nothing, but I err on the side of caution.</p> <p>My pet has not become sick as she refuses to eat it. However I have read of others who have eaten it and started vomiting. A friends cat has started vomiting after consuming affected batches.</p>						

<a href="#">EON-351854</a>	4/22/2018 20:40	Feed Me, Boost me	I had been feeding Trudog Feed Me and Boost Me for about 1 week exclusively. On April 19, 2018 my dog was very sick. I rushed her to my vet, All Paws Veterinary Clinic. She had blood drawn and I was told she had acute pancreatitis. She was admitted and I took her home that day around 6:30 pm with the understanding that I would bring her back the next morning for more medical support. On the 19th I called the 800 number on the Trudog website. I wanted to cancel my subscription and order that I had placed. I called 8 times, left a detailed email, and left a voicemail. No one returned any of my attempts to speak to someone. I also asked for the sodium content for the food out of the bag. On April 20 I contacted PayPal and filed a complaint. They gave me a phone number that when I called was told to leave a text. I did and about 15 min later I received a text, email and phone call. My order was cancelled but I again asked everyone I had contact with what the sodium content was. No one could answer. I then received a email with information from their vet about pancreatitis. That evening I found the recall notice about their food and salmonella. I sent the info to my vet and he said it's possible she could also have salmonella and that he would look into it. I sent Trudog another email requesting the sodium content again and telling them that I would like the unused food tested. I paid \$605 the 19th and \$346 on the 20th. She is still recovering and I have to bring her back the beginning of this week. (b) (6) is still not out of the woods. I am feeling that her illness was caused by the food and Trudog will not contact me.	18	Years	Pinscher - Miniature	Dog	8.2	Pound
<a href="#">EON-351844</a>	4/22/2018 14:00	Diamond Naturals Large Breed Puppy Dry Food	I wanted to alert you to a potential food problem - Diamond Naturals Puppy. We just opened this bag over a week ago and my dog began having severe diarrhea from this food. It took over a week of bland diet boiled chicken and rice and attempting repeatedly to add the kibble back into his diet for us to realize that the diarrhea returned every time kibble was gradually reintroduced. We solved our problem completely by running to a store and purchasing a different brand of food - He is 100% back to normal after 12-24 hours on a different kibble.  I have kept a baggie of this kibble in the freezer if a sample is ever desired. I just worry about other customers that could be impacted, especially with this being a puppy food as pups are fragile when it comes to diarrhea and dehydration. I hope someone can look into this brand of food if not just the individual lot as it seems like this whole brand has been causing GI issues since January of this year (through word of mouth).	12	Months	Retriever - Golden	Dog	70	Pound
<a href="#">EON-351838</a>	4/22/2018 12:16	Merrick Grain Free Winsaling Classic Recipe	I have been purchasing the Merrick Grain Free Dog Food for a while now. Last evening when I went to get our little Chihuahuas their dinner, I opened a can of the Grain Free Winsaling Classic Recipe and poured it in 2 bowls. LUCKILY I saw a chicken bone in the bowl into which I had just emptied the can and removed it. What would have happened if I had not found this chicken bone... I might have a dead dog right now. Someone on the manufacturing end screwed up big time. You cannot leave chicken bones in dog food...!!@!@!						
<a href="#">EON-351825</a>	4/22/2018 4:44	Canidae pet food made by pet people Grain free pure sea	All my dogs got sick. They are throwing up and have diarrhea. One of my dogs the yorkie terrier is really sick he no longer wants to eat and is now always in bed. We are all very worried about him. We hope by reporting this we can help owners. We want to prevent this from happening to their furry babies.	8	Years	Terrier - Silky	Dog	15	Pound

<a href="#">EON-351824</a>	4/22/2018 2:52	Quackers 100%natural breast of duck	Persistent glucosuria on multiple follow up urinalysis tests to monitor for stone recurrence. Glucosuria stopped being present when clients withdrew all jerky type treats at our request.	12	Years	Chihuahua	Dog	11	Pound
<a href="#">EON-351822</a>	4/22/2018 1:08	Iams perfect portions grain free healthy kitten chicken recipe (pate)	Our seven month old kitten has been eating Iams Chicken Perfect Portions Grain-free since December when we adopted her. She started vomiting after starting on a new package we ordered from Amazon. We took her to the vet and they did x-rays and labs with remarkable results: Creatinine 9.6 BUN 139 IDEXX SDMA 81 (yes, 81! - NOT a typo) Phosphorous 13.7 Chloride 107 Anion gap 30 Potassium 5.5 Creatinine kinase 500  She tested negative for bacteria in her urine and positive for coronavirus titer so FIP is possible but poisoning also is possible so I wanted to fill out a report in case other cats may be in danger.  Her kidney labs are back within normal limits after IV therapy and we will continue to monitor and follow up with the vet.	7	Months	Domestic Mediumhair	Cat	5.75	Pound
<a href="#">EON-351820</a>	4/21/2018 23:56	Vital	On 4/13/18 I purchased a bag of Freshpet Vital Grain Free Dog food. The food is in a plastic 1.75 pound bag. I purchased the chicken, beef, salmon & egg recipe. The dog food had a sell by date of 07/24/18 I made the purchase at Petco (b) (6) on . I took the bag home and refrigerated it immediately. I opened the bag the morning of 04/15/18, fed my dog and put the food back in the refrigerator. When I came home from work that night many of the pellets in the bag had turned green. The next morning 04/16/18 my dog was sick with diarrhea and vomiting. My dog was sick for 3 days and is still not back to normal. I returned to Petco on 4/16/18 and took the food back but this is not the first time this food has turned bad on me. I bought a same size bag 30-60 days ago and had the same thing happen but I was able to catch it before my dog ate it. I use to by this food in a tube and had the tube turn green also. I will not buy this food again but I think someone should look into how and why this food goes bad months before the sell by date and just 24-48 hours after opening before a dog or cat dies.	11	Years	Lhasa Apso	Dog	26	Pound

<a href="#">EON-351807</a>	4/21/2018 17:36	Milos Kitchen Chicken Jerky	My dog, (b) (6) was given this treat about a year or 2 ago. She slowly became less active and I had no idea why. It turns out that she was slowly getting kidney failure. The vet was unable to bring her kidneys levels down to where she can have a decent quality of life. At the end, we made the extremely difficult decision to euthanize her so that she won't be in that much pain anymore. Please check on this product to make sure that it is safe for all the beloved dogs out there.						

<a href="#">EON-351772</a>	4/20/2018 22:32	Southern States Rabbit Food Premium	I bought rabbit feed from So. States out of convenience. Within 2-1/2 months, three pet rabbits died. Stopped eating, appeared to have strange chewing, weight loss, fur issues, twitching, mucous in feces, etc.	8	Years		Rabbit	6	Pound
<a href="#">EON-351757</a>	4/20/2018 17:44	Meow Mix classic Pate 12-cup variety pack with classic pattay in real tuna flavor classic pate and mixed grill with real beef tuna and chicken and classic Pate with real chicken and liver	I opened the wet food and and the waiting cats and I quickly put it down until the smell caught up with me and it smells like plasticizers or some sort of putrid chemical soup and I have been feeding this brand for months and that is an abnormal smell. Both cats ingested very little of the liquid before I removed the food. I immediately try to contact Meow Mix they're closed. The cats have diarrhea for the next few days, but are in otherwise decent shape. Finally talk to meow mix on monday they offered to send me a fedex label, which has not arrived and I have retained my own sample because I don't trust them. They have not so far conducted a test on their own batch because I'm the only one who has complained according to their marketing department.	1	Years	Unknown	Cat	15	Pound
<a href="#">EON-351750</a>	4/20/2018 16:40	TruDog freeze dried raw treats and TruDog Boost me. I had purchased others that I never used. Trashed them.	Gave both my dogs TruDog Boost me and freeze dried treats. I have 2 dogs, the older one got sick right away went to vet bc she does sometimes get upset stomach when we travel by car, so I thought it was just that. Then about 2 days later my 6 year old, who has no health issues started to have the same issues and I saw a recall for the TurDog dried treats. So i told the vet i thought it might be the cause. The older dog needed a SubQ bc she was so dehydrated, both were given shots to help calm their tummies and 2 meds to take at home. After a few days they had improved. PS IT took multiple calls and emails to the company, They were in denial. They eventually did refund me for the product, less shipping. I threw everything away so I don't have the batch numbers. BUT I am sure this was the cause bc I haven't had any GI issues since.	6	Years	Shih Tzu	Dog	13	Pound
<a href="#">EON-351725</a>	4/20/2018 11:12	Canine Carryouts	Had all three dogs (2 are 1 year-old pit/lab mix) get sick. Decreased appetite, vomiting, diarrhea, increased thirst. Have been giving these treats for months. All of a sudden all three became sick. That's the only thing they had in common. The older dog eats a completely different brand of food than the puppies, so it wasn't the food.	10	Years	Terrier - Jack Russell	Dog	26	Pound

<a href="#">EON-351709</a>	4/19/2018 21:52	Pedigree adult dry dog food	My dogs ate Pedigree dry dog food for the first time on a Friday night. Saturday they started having bloody diarrhea and throwing up. Sunday, my dog (b) (6) couldn't move, he was frozen like a statue, throwing up blood, I rushed him to the vet emergency hospital on Sunday morning. He spent a week at two different vets, it cost me \$6000 to keep (b) (6) alive.	7	Years	Pointer - English Pointer	Dog	75	Pound

<a href="#">EON-351706</a>	4/19/2018 19:36	Rawsome Revolution Whole Prey Rabbit Grind	The company is mislabeling their products and the ingredients don't line up with where they say they get them and what is on the label. I ordered from them for my first time and wasn't sure what I really got. It is supposed to be human grade but it has bone and fur in it. Some of the labels say human grade and another part said fur on and bone not for human consumption. I asked where it was made and they said a CA AG certified kitchen but the kitchen they told me doesn't allow fur on animals or anything. I am not able to get them to reply to me anymore so I threw the products away.						
<a href="#">EON-351703</a>	4/19/2018 19:04	GOLDEN REWARDS Chicken Jerky Recipe	Attacks included diarrhea, vomit with foamy consistency, tremors, spasms, dilated pupils. She has had these attacks for years, beginning several years after her birth (she is 9 now) and I believed it was a genetic disorder that had manifested later in her life, etc. However, about two months ago, I ran out of these Golden Rewards chicken jerky treats and did not replace. The attacks, which had been approximately every two weeks, had ceased. Since I only very rarely gave her these treats, I never correlated these attacks with feeding them to her. Just a few days ago, I obtained more of these treats at Walmart. I opened the bag and fed her some this morning, then took her for a walk. About 20 minutes after I fed her the treat (a strip approximately 2 cm x 6 cm) she had another episode which included vomit, tremors and spasm. This *cannot* be a coincidence. She had a breakfast of kibbles earlier this morning, but about 4 hours earlier. After reviewing this with my ex-wife, we realized that these episodes did not start until we began shopping at Walmart, where we began to purchase this brand and type of treat. I have a nearly full 16 oz bag which I have sealed with its own zip seal and inside 2 zip storage bags to preserve. Possible lot numbers on bag are: 2017052227033A1 or H0757 24717 121. Expiration date: 03/03/2019. I am considering getting a urine sample taken at the veterinary clinic to be frozen for testing. I understand the markers you might be looking for are persistent, so I do not need to do so immediately, if I am not mistaken.	9	Years	Dachshund - Miniature	Dog	18	Pound
<a href="#">EON-351649</a>	4/19/2018 12:32	Gravy Train	Owner bought small cans of Gravy Train at 99c Store. (Does not recall flavor, but has receipt, no product left over.) They started with soft food in August at their Vet's recommendation. On (b) (6) dog got very sick. Took to vet who said kidney was failing. Gave two treatments that day (water with antibiotics) to flush it out. He had a treatment everyday up until (b) (6) when the dog died before it went in for treatments. Vet said they would report. Found out about the gravy train adulteration issue at the Vets. Thought the cans were about 12 oz.	14	Years	Shih Tzu	Dog	14	Pound
<a href="#">EON-351605</a>	4/19/2018 9:52	Rachel Ray Nutrish	We bought Rachel Ray dog food, and fed it to him after about a week he started throwing up and acting lethargic we called vet and said to bring him in, in the morning, we went to bed and woke up and he had passed away. He was a very healthy happy dog before feeding him the Rachel Ray dog food.			Retriever - Labrador	Dog		

<a href="#">EON-351588</a>	4/18/2018 22:44	Golden Rewards Sweet Potato Wrapped with Chicken, Golden Rewards Cheese with Chicken Twists, Golden Rewards Small Biscuit Wrapped with Chicken, Golden Rewards Duck Jerky Recipe	On January 26, 2018, I took my dog to her veterinarian for annual vaccines and a complete physical including blood work. Her Results returned and she was declared to be in good health with no problems. Her Creatinine level was 0.8 with normal range being 0.5 - 1.6. Her BUN/Creatinine Ratio was 14 with normal range being 4 - 27. On March 30, 2018 I took <sup>(b) (6)</sup> to the vet clinic for vomiting and constipation. The veterinarian took blood work and the results showed her kidneys were failing. Her BUN level was 70 and her creatinine level was 5.6. The vet explained she had significant damage to her kidneys and asked about possible toxins she had been exposed to. I don't work, and I supervise my dog 24/7 and she had not been exposed to any toxins. I looked through my pantry for treats and discovered all of them had been manufactured in China. All were sold under the brand Golden Rewards and they consisted of Chicken Jerky, Duck Jerky and dried Yams. She has not been exposed to any toxins, even though I never use toxic substances for cleaning, for pest control or anything else, she is never out of my sight, she sleeps with me and when she goes outside to potty I am with her. I am doing everything I can to keep her comfortable and alive including diet changes and subcutaneous fluid injections daily at home. I know of no other possibility causing her kidney disease other than the treats.	9	Years	Unknown	Dog	12	Pound
<a href="#">EON-351506</a>	4/18/2018 11:40	Blue Buffalo Blue Divine Delights	I purchased a box of 12 Blue Divine Delights by Blue Buffalo for my puppy to mix in with normal blue buffalo puppy kibble. My puppy seems to really like cesar's wet food mixed with kibble so I figured I would buy him the blue buffalo divine delights wet food to mix in. He got to eat about 1 1/2 individual packets when he started getting watery, bloody stool. My puppy has never had this issue, and upon other research on the blood stool subject, I found others had the same issue with this particular dog food brand.						
<a href="#">EON-351493</a>	4/18/2018 10:08	Rachael Ray Nutrish Natural Dry Dog Food Real Beef & Brown Rice Recipe 28 lbs	Started feeding my 3 yr old dog Nutrish Beef the 2nd week of March 2018. He started having seizures March 28th. Vet could find no reason for seizures after \$315.  I recently moved and racked my brain out as to what changed to cause his seizures.  I researched the city water, all good.  Researched the Nutrish food and BAM! Seizures reported with this food. I found this is the only one that Rachael Ray makes that causes seizures along with other medical issues. I stopped the food 4/2 and as of today, 4/18, no more seizures.  I started feeding my dog the Nutrish Grain Free on 4/4 because rated higher than Nutrish and no mention of seizures. So far so good, no seizures.	3	Years	Mixed (Dog)	Dog	88	Pound
<a href="#">EON-351457</a>	4/17/2018 19:32	Merrick Backcountry Grain Free Large Breed Dry Dog Food 22 lbs.	I believe that counterfeit dog food is being sold online through Chewy and amazon ( not necessarily Amazon, but their sellers). I bought merrick backcountry grainfree large breed dog food. Two bags had little to no freeze-dried chicken pieces in the bag. Many other people had this same review. I add water to the food to make it soft for my dog. The third time after adding the water, the food smelled like spoiled meat. It was so bad, I thought I was going to be sick and I had to throw away the remainder of the bag.						

<a href="#">EON-351454</a>	4/17/2018 19:16	annamaet mannitok	I believe that counterfeit dog food is being sold online through Chewy and amazon ( not necessarily Amazon, but their sellers). In his case, my dog was on a special diet due to allergies. Annamaet ManitoK. This batch of food looked different and my dog had an allergic reaction. Went back to local store for food and never happened again with this dog.	10	Years	Pit Bull	Dog	70	Pound
<a href="#">EON-351446</a>	4/17/2018 16:56	Diamond Naturals Senior dog Chicken egg oatmeal	Four days after purchasing new bag of dry dog food, the brand which he has been eating for 3 years, he began having diarrhea, lethargy and loss of appetite. Vets were called, labs done and he was given a bland diet and meds for 11 days. Improved so his regular diet was reintroduced gradually per vet advice. Symptoms returned after dry food restarted, 5 days after he was tapered off bland diet.	13.5	Years	Retriever - Labrador	Dog	84	Pound
<a href="#">EON-351372</a>	4/17/2018 6:44	9lives Ocean Medley cat treat	WE purchased the 9lives treats from a local dollar store on April 6th and started feeding her the treats a couple per day. By Sunday she was throwing up everything she ate. By Wednesday we realizes it must be the treats and stopped giving them to her. She continued to throw up after she ate. And finally when she threw up just water on Friday evening we took her to the vet who discovered she has kidney displasia and was suffering renal failure. We took her to the hospital where she stayed 24 hours and took her home. Feeding her medicines and special diet. But she has had an episode where she is eventually going to die.	2	Years	Domestic Shorthair	Cat	10	Pound
<a href="#">EON-351371</a>	4/17/2018 5:32	Freshpet Select	I purchased a tube of FreshPet Select food and fed my dog the allotted amount listed on the tube on Sunday, April 15, 2018 in the afternoon. My dog was doing well, defecating normally, etc. On Monday we woke to our dog begging to go outside. Once we took him out he began having extreme diarrhea. After returning to work he continue to have diarrhea. I fed him plain white, steamed rice to help alleviate his stomach, but he continued to have diarrhea. Between 3pm-currently (2am) he has had to go out every 1-2 hours to keep defecating. He has now started vomiting as well. He has not eaten or drank anything outside of his normal food diet except the FreshPat Select tube of food. I will be taking him to the vet before he dehydrates and things worsen.	14	Months	Great Dane	Dog	72	Pound
<a href="#">EON-351315</a>	4/16/2018 15:04	9 Lives Plus Care	The veterinarian said the cat showed signs of poisoning akin to lillys or antifreeze, we have neither of these in our home. we searched high and low to find anything just for some answers. the only thing we can think of was a new bag of food opened the previous day. His kidneys were injured and not able to function properly.	10	Years	Mixed (Cat)	Cat	11	Pound

<a href="#">EON-350815</a>	4/10/2018 10:16	Pedigree dog chow Purina local grocery store generic brand and a few others dog food that my brother (b) (6) bought for the dog Rottweiler he purchased from pet store from a puppy age.	The dog vomits when there wasn't any reason, etc., the dog food is to blame. The dog seems to me to be experiencing a problem probably from the dog food from the manufacturer sent to the local grocery store including the convenience store where purchased with a sales receipt or didn't receive a sales receipt of purchasing animal dog food exclusive for animal dogs only from convenience store and local grocery store.	2	Hours	Rottweiler	Dog	50	Pound
<a href="#">EON-350797</a>	4/9/2018 22:36	primal freeze dehydrated duck	Brand: Primal freeze dry duck  (b) (6) (dog) and (b) (6) (cat) have been on it for 6 months so it's not a new diet  First day of the new bag: fed the new batch to (b) (6) (dog) on Thursday by Friday morning he was vomiting with diarrhea I was unsure what caused this So I continued feeding him his food and gave some to the cat on Friday...by Saturday morning both were vomiting with diarrhea I just discontinued the food By Sunday (b) (6) would not stop vomiting or diarrhea after the third round it became bloody diarrhea he started to eat a couple hours later.  But by Monday morning 4 a.m. every 30 minutes he had diarrhea and vomit the diarrhea was Liquid full of blood he started hyperventilating and trembling I rushed him to the vet it was confirmed there was a reaction to the food it could have been toxic or something inside the cause an infections blood work showed white blood cells being very high along with the other group of white blood cells that attack toxins or parasites the cat is under the same condition we had to take him into the vet this Friday and (b) (6) has not been eating until recently( Saturday April 7th) the vet had to see him again this Friday April 6th and give him a B12 shot. The cat is on medication for the same problem he has been experiencing diarrhea and vomit. It started getting worse Friday when the vet did a test he confirmed it was the same problem the dog was experiencing due to the food.	9	Months	Maltese	Dog	10	Pound

<a href="#">EON-350670</a>	4/8/2018 13:08	Iams Proactive mini chunks AGES 1-5	<p>About 3 – 4 weeks ago we switched our 21 month dog, (b) (6) from puppy chow to Iams Proactive mini chunks in a 30 lb green bag purchased at PetSmart. About 10 to 14 days later she started to act strangely. (b) (6) never turned down any food including the dry puppy chow she had until recently after the switch to Iams Proactive mini chunks for dogs ages 1 - 6. She started to leave part of the food or pick at it rather than devour it as was characteristic of her voracious appetite. Then the soft stools started, then frank diarrhea and anal bleeding.</p> <p>We took her to (b) (6) Veterinary Hospital, our usual vet. Tests were performed. It was suggested we stop feeding the Iams food, start with an alternate dog food Royal Canin gastro intestinal veterinary diet in wet can and dry, and see how she progressed. Also, she was started on Provable Forte 1 cap daily and Metronidazole 500mg daily. The labs came back negative for parasites and infection. Within a day, the diarrhea came under control and cleared as well as the bleeding.</p> <p>Although we dumped the Iams food, we are holding a jar for sample testing, if needed. Also, we googled for problems and it appears there are many reports by dog owners with similar issues and experiences and worse. Some dog owners report their dogs died after eating this Iams dry food. Some report we have read state MARS (parent company) changed the formula for this dog food in 8/2017 after which the negative events began surfacing.</p>	20	Months	Terrier - Australian	Dog	53	Pound
<a href="#">EON-350666</a>	4/8/2018 12:20	Purina Friskies Paté Variety Pack	<p>In contrast to prior years, (b) (6) became picky about eating Friskies wet food. He suffered extreme weight loss, refused to eat, and would vomit immediately after eating. With medication (Lactulose), he gained weight and eats, but continues to vomit frequently.</p> <p>Upon inspection of my current batch of cat food, I found pieces of black and gray rubber/plastic within the food. The first can I opened of the Turkey &amp; Giblets Dinner, from the Paté Variety Pack, had many small specks of black and multiple large pieces of rubber. The bottom of the can is stamped multiple times and also has a blotch of pink ink. It is lot #1157.</p> <p>I have also had problems with the cat vomiting food from the Prime Filets Meaty Favorites pack. The current cans are lot #1161.</p>	5	Years	American Shorthair	Cat	12	Pound
<a href="#">EON-350648</a>	4/7/2018 21:08	Darwin's Natural Pet Products Natural Selection Duck Meat for Cats	I fed him the duck from Darwin's raw cat food. He vomited a few times, but I thought it might be hunger pukes. So, I fed him a small amount first and then a larger amount later. He still vomited. Up until that point, he had been gaining 1 to 2 ounces daily. But he suddenly lost over a pound overnight. He became very ill and developed a fever. He almost died. I spent 42 hours straight taking him to emergency vets and monitoring him. I spent around \$800 in vet bills. I missed 1.5 days of work and had to pick up a second job so that I could recoup the losses. He almost died. I didn't want to believe it was the food, but now that I see all the news articles, I do believe it was the food.	5	Months	Ragdoll	Cat	7.5	Pound

EON-350584	4/6/2018 10:00	Blue Wilderness Healthy Weight Formula--Grain Free	<p>On February 5, 2018, I noticed (b) (6) consuming large volumes of water. Her water dish holds 1300 ccs and I would be filling it twice a day! She is an indoor dog with supervised access to the fenced yard to play, pee and chase squirrels! We also take daily hikes on local trails and play catch (her favorite sport) in the yard every day. She sniffs and marks her territory everywhere so I don't pay attention to her urination unless her pattern changes. She started to urinate large volumes in the house—in a spare bedroom—during overnight hours. Very unusual for (b) (6) who never urinates inside the house! On February 14, 2018, I brought (b) (6) to her veterinarian, (b) (6), as soon as this happened. The vet performed a diagnostic examination, a free catch urinalysis, and administered her annual vaccinations. Lab results attached. (b) (6) diagnosed a urinary tract infection and prescribed amoxicillin 250 mg twice daily for ten days.</p> <p>(b) (6) did well for several days and the urinary frequency and excessive drinking subsided. I administered her amoxicillin as prescribed. The following week, however, (b) (6) began again urinating large volumes in the house. (b) (6) was on day 7 of amoxicillin for her UTI. She also started to profusely lick her genitourinary area. We returned to the clinic on February 20. I suspected (b) (6) might have an amoxicillin-resistant organism or might have bladder stones. A sterile urine sample was collected for culture and sensitivity. A single view, lateral x-ray was taken to check for stones. The x-ray was negative for stones. Amoxicillin was discontinued. We discussed the possibility of this being an inflammatory, perhaps cystitis or vaginitis, process rather than an infectious process. The urine C&amp;S subsequently reported no growth at 48 hours.</p> <p>We agreed to try (b) (6) on a low-dose prednisone regimen of 5 mg twice a day, tapering to once a day then every other day. (b) (6) did not tolerate the prednisone, which exacerbated her urination frequency, large voided volumes, and excessive drinking. After 2 days, we stopped the prednisone. On February 23, (b) (6) examined (b) (6) again and drew a chemistry panel to rule out metabolic causes of the polydipsia-polyuria. The panel was normal. Lab results attached. I discontinued her Blue Wilderness Healthy weight diet (b) (6) symptoms resolved over the weekend. After these massive urination events, (b) (6) is now back to normal with no further therapy.</p> <p>(b) (6) and I discussed the issue of (b) (6) elevated urinary pH value of 9. Could this alkaline urine cause an inflammatory cystitis and/or urethritis in the absence of infection or bladder stones? The response to prednisone, however brief, leads me to believe this was inflammation rather than infection. I asked what causes alkaline urine in dogs? (b) (6) immediate response to my question was diet. She educated me on the effects of diet on the genitourinary tract in cats and dogs. (b) (6) suggested several other commercial brands of grain free dry dog kibble. Based on our conversation and her recommendations, I am now in the process of transitioning (b) (6) onto another grain free kibble diet.</p>	4	Years	Cattle Dog - Australian (blue heeler, red heeler, Queensland cattedog)	Dog	30	Pound

She grew worse, was unable to breathe, and we had to have her put to sleep that night.	11	Years	Terrier - Boston	Dog	22	Pound
<a href="#">EON-350567</a>	4/5/2018 20:32	PUR LUV Grande Bones Bacon Flavor	Gave my dog a Pur Luv Grande Bone - Bacon Flavor on 3/25/18. He started to vomit on 3/26, and from then on every time I fed him. He stopped eating his food on the 28th, maybe just a few bites/grains here and there. I changed his food (thought is was his food, that makes him sick), did not want to eat his regular amount either. He was still drinking water. On April 4th I inspected his stool which was getting less and less --- I found 4, about 1 inch in size, red, hard rubber like "rocks" in his stool. I cleaned those and it seemed to be a hard spongy red material, which I could break apart ( almost like an eraser). Wondering how did those things get in his stomach. Recalling everything he ate, I examined his grains and the rest of his can food, nothing looked like those red things. Then I got the bag of treats out, and the same color (red) was in those Pur Luv Grande Bones. I did some reading up about those dog treats, and found out, that many other dogs got very sick on those too, ( with bowel obstruction, hepatic failure, even death). The treats can not be digested and get "stuck" in the stomach/intestines/bowels. There was even a law suit against the manufacturer. Why are they still allowed to manufacture and sell those? As for my dog (b) (6) today was the 1st day he did not vomit his food back up, I really hope that he passed those "treats" thru his digestive system and we can avoid going to the vet.	9	Years	Retriever - Labrador	Dog	136	Pound

<a href="#">EON-350511</a>	4/5/2018 15:12	Ocean Whitefish & Tuna Dinner	<p>My report is less about something occurring and more about something, within pet food at least, that I find sloppy and frankly a bit alarming, from a transparency standpoint.</p> <p>Recently, I've had a need to buy a can or two of pet food from Albertsons because I was out and in need of the food I would typically buy. Beyond ingredients one of the most important things for me to know is where the product is made. Not where it is distributed or where its made, i.e. China.</p> <p>I find it worrisome that QR codes, which really, though great, most people don't use or understand, are being used as a catch-all, I suspect, for information the manufacturer would rather you not see at first glance. But, having this "scan for more information" likely gets them a pass from the FDA and whomever else.</p> <p>I would not take the time to write if this was not a real concern. No one is scanning QR codes and most people, prior to purchase, should have all relevant information displayed on the label.</p> <p>I'm hoping you can look at QR codes as a supplemental source of info and not a domain for highly critical information such as, "Made in".</p> <p>Many thanks!</p>						
<a href="#">EON-350506</a>	4/5/2018 9:00	Purina Beneful Grain Free Simply made with wholesome ingredients, Purina Beneful Healthy Puppy	<p>I noticed about a month ago that (b) (6) was eating less. So we thought it was just a bad bag of dog food. So we ordered a new bag but he would not eat that either. Then we called the vet. The vet did Blood work and found out (b) (6) kidneys were off. He required a urine sample to confirm. Turns out (b) (6) has a kidney disease at one and a half years old. He has lost 7 pounds already. My Friend told me to research the food I was feeding him because she had a similar thing happen to another one of her friends. I have been feeding (b) (6) Beneful ever since he was a puppy. We started him out on Beneful health puppy then when he turned one we switched to Beneful Grain Free. In my research I learned that all Beneful food has Menadione sodium bisulfite complex in it. This is a synthetic vitamin K. This substance is toxic to kidneys, lungs, liver, and mucous membranes. (b) (6) is not on a powder that goes into his food to absorb the toxins and send it out his stool instead of through the kidneys. He is also on anti-acid because his kidneys cannot process acid very well anymore and that upsets his stomach and then he throw up all over my house. We are due to go back to the vet in a week to see if (b) (6) blood work has improved. I am not looking for anything out of this. I just do not know why this chemical is allowed in any dog food if it is known to cause these problems.</p>	1.5	Years	Great Pyrenees	Dog	77	Pound

<a href="#">EON-350483</a>	4/4/2018 13:20	Blue Buffalo Basics Large Breed Adult dog food - Limited Ingredient Lamb/Potato 22lbs (fed this for 5 years  Blue Buffalo Basics Adult dog food - Limited Ingredient Turkey/Potato 4lbs -once	We have always fed our dog Blue Buffalo Basics - lamb, for large breeds. Our local petsmart was out of his food one time, so I purchased Blue Buffalo Basics - Turkey, for Adult dogs. It was when he was eating this turkey kibble that he started drinking water excessively, and needing to go to the bathroom in the night. (Not usual.) I purchased his regular lamb kibble when done the smaller bag of Turkey kibble, and that was when he first started refusing to eat. I thought maybe he preferred the Turkey kibble, so I purchased it again but he refused to eat that also. This was when we started noticing he wasn't drinking water, and wasn't eating anything tasty we tried to offer him, such as cheese and peanut butter toast. He started to lose weight, still wasn't drinking water, was not himself. I took him to the vet for blood work and urineanalysis. He had elevated calcium, and signs of kidney failure. We gave him a gastrointestinal food, which he ate but not eagerly. He continued to lose weight. About 6 weeks later we took him to a different vet, who did blood work and urineanalysis again. He was in late stage kidney failure! This was a dog that had always been healthy, always high energy. We rarely fed him table scraps or treats, thinking his dog food was best for overall health. We told our vet he was on Blue Buffalo, and she alerted us to some past recalls, and current lawsuits involving that brand. I did some research, and to my anger and dismay learned of other pet owners whose dogs have experienced kidney failure due to this dog kibble!!! I am so unbelievably concerned and angry that our beloved dog died due to the expensive kibble we were feeding him. It was needless and heartbreaking.	5	Years	Retriever - Golden	Dog	60	Pound

All 4 of my cats are refusing to eat it. The order actually makes me sick. I have another flavor that is so much drier than it use to be. Has anyone from the FDA look into the company lately? Please look into what is going on.						
<a href="#">EON-350400</a>	4/3/2018 16:20	Purina Puppy Chow	I was feeding my dog Purina Puppy Chow from a medium size bag made in Davenport IA. My dog would eat the entire bowl ( 1 1/2 Cups ) and he would eat the entire bowl. The very day I fed him from a bag made in PA he would eat a few bites. Then he would start acting weird. He would sniff around the bowl move the food with his nose and then walk away. I notified Purina and they asked for information from the bag. They next time I was out I picked up a new bag I could not find a bag made in Davenport IA. I did find a bag that was new packaging manufactured in PA. They did not tell me of any issues so I though this would at least be a fresher bag (new packaging). He is still doing the same thing and today after eating I noticed he was going to throw up. So I got him on the paper and he puked I would say all of what he ate He had eaten a little at 7am and a little more around 11 by noon he was throwing up.	7	Months	Corgi - Welsh Cardigan	Dog	15	Pound
<a href="#">EON-350359</a>	4/2/2018 15:28	Grain Free Easy to Digest Salmon Sweet Potato & Pumpkin Recipe	A heart murmur was auscultated on a routine exam and patient was diagnosed on 2/26/18 with moderate dilated cardiomyopathy - ruleout idiopathic vs. taurine/amino acid responsive - with moderately decreased left ventricular contractility. Patient is on a grain free diet - Nature's Recipe Salmon and Sweet Potato. It is suspected that some grain free diets provide insufficient levels of taurine, contributing to the development of dilated cardiomyopathy. At presentation, (b) (6) had no cough; normal appetite and attitude; no exercise intolerance. Medication management and taurine supplementation was recommended. She will be rechecked in June 2018.	13	Years	Spaniel - Cocker American	Dog	11.7	Kilogram
<a href="#">EON-350358</a>	4/2/2018 15:16	Science Diet Advanced Fitness Adult Dog Food	(b) (6) has been eating Science Diet Advanced Fitness adult dog food for 3.5 years. We bought a new bag of food and he later started vomiting after every meal and throughout the day. A few days later he developed liquid diarrhea. We had his stool checked for parasites which came back negative but treated him with metronidazole and panacure and a bland diet as well as metaclopramide and Zantac. When his symptoms seemed to calm down, we started to try to reintroduce his science diet food slowly. He began vomiting again right away. We have not fed it to him since and his vomiting has stopped. I am aware that this could be a food sensitivity, but I am just a little concerned that it could have been bad food since it happened right after opening a brand new bag. We unfortunately do not have the packaging since the food was transferred to a container. We do still have the dry food though and I didn't know if it would be worth it to have it tested. Thank you!	4	Years	Mixed (Dog)	Dog	58	Pound

<a href="#">EON-350357</a>	4/2/2018 15:08	Newman's Own Premium Stew Beef and Vegetable	This was the second defective, the second behind the most alarming. The first can I opened was all gravy no meat. I took photos of product and the date with upc and emailed manufacturer. I was sent a coupon. The second I opened had blue plastic in with the meat product as well as what looks to be a large casing? I contacted the manufacturer again with photos and they were not pleasant they told me they would contact manufacturing. I emailed them back for an update they would not reply. I went to the store today and supplied them with info. I do have correspondence UPC's and photos. I would like to send you the photo very alarming.

<a href="#">EON-350300</a>	3/31/2018 16:36	Nutro Soft Loaf Grain Free Chicken Recipe Kitten Food	Last night when I opened a can of Nutro Grain Free Soft Loaf Kitten Food (chicken recipe) there was mold all over the top of the food. After inspecting the can I found a slight dent in the top edge of the can. Checked all of the other cans in the 24 can case and found two other cans had the same problem and I could actually see the opening at the edge of the lid and a grayish color, which probably indicates that mold was present in those cans as well. The can I opened has the following information on the bottom of the can: Best by 12/18/19; 751C2NSC01; 02:20; NCKC. One unopened can where mold is visible has the exact same information, while the other unopened can where mold is visible has the same information, but 02:21 is listed, instead of 02:20.							
<a href="#">EON-350298</a>	3/31/2018 15:20	Purina Cat Food (specific type unknown)	Purina is advertising for healthy, well groomed cats, particularly certain breeds of purebred cats, for a photo shoot in Chicago 2 weeks from now. Most reputable breeders and owners of purebred cats would never go near a Purina cat food, such that the cats they are seeking for their ads are generally fed foods that cost 2 or 3 times as much as the Purina brands. This strikes me as deliberately false advertising as the intent is plainly to depict these cats as the product of Purina foods. I am not sure what regulatory control may exist or whether the FDA is the correct agency. It seems to me it should be prohibited. I can send you screenshots of the notices if you wish. The photographer is posting them on Facebook targeted at breeders and owners of champion purebred cats and kittens.							

<a href="#">EON-350297</a>	3/31/2018 14:52	Purina Cat Chow Naturals Original	All of our indoor cats and 1 outdoor stray are fed Purina Cat Chow Naturals, and have eaten it without issue for years. The last bag we bought, however, had adverse affects on all the cats. Cats became lethargic and ill, began vomiting & having diarrhea. Two of the indoor cats were vomiting blood & were taken to the vet. Every cat stopped eating the food, including the outdoor stray. Even the raccoons that come to the porch at night wouldn't eat it. We have thrown the food away, cleaned all the bowls, and have been feeding everyone a different brand & wet food while they recover. The two who went to the vet were treated with an anti-emetic (cerenia) and famotidine.	16	Years	Mixed (Cat)	Cat	6.16	Pound

<a href="#">EON-350287</a>	3/31/2018 9:32	Canidae All Life Stages Multi-protein Formula	Recently purchased a 44-pound bag of Canidae All Life Stages Multi-protein Formula dog food. I always buy this food, so I am familiar with it. All of the food inside, as well as the interior of the bag, was coated in some kind of oil. Looking at the bag, there is no expiration date or lot number stamped on it. I did not feed this food to my dogs.						
<a href="#">EON-350279</a>	3/31/2018 0:00	IAMS Proactive Health Adult Large Breed, IAMS ProActive Health Mature Adult Large Breed	(b) (6) has been eating the same IAMS dog food his entire life. After purchasing a new bag of food, has been vomiting immediate after every meal. He became lethargic and withdrawn. We purchase some IAMS "Mature Adult" food thinking maybe he needed that (he's very old, but incredibly healthy for his age). Same result. We began feeding him plain, cooked chicken thighs and rice, and he immediately stopped vomiting. After another day he was energetic enough to go swimming. So we purchased another bag of IAMS and he refused to eat it. We put some gravy o it and he ate it, but immediately vomited. I went online and was shocked to see dozens of recent complaints with similar symptoms.  <a href="https://www.consumeraffairs.com/pets/iams.html">https://www.consumeraffairs.com/pets/iams.html</a>  Ow that we know he problem, we will switch foods, but someone needs to look into what is wrong with this food.	14	Years	Retriever - Golden	Dog	75	Pound

<a href="#">EON-350274</a>	3/30/2018 19:28	Diamond maintenance dog food for moderately active adult dogs	I purchased a new bag of dog food recently, diamond maintenance brand. My Great Dane eats 8 cups a day of this food. I have two dogs the other dog does not eat this food, although he was always interested in eating it. This new particular bag neither dog had interest in, very strange for my American bully who wants to eat Everything!!! Eventually my Dane did eat it, and ate it for almost 4 days before he became deathly ill. He became restless, panting heavily, vomiting bile, running a fever, lethargic, depressed, Weak, shaking, shivering profusely. I rushed him to the animal emergency clinic, preformed X-rays to rule out bloat, which is common in Danes. They confirmed no bloat but he remained very sick even with intestinal antibiotic medication. I returned to the vet the very next day, ran bloodwork to find he was suffering from pancreatitis. He continued to decline, repeated X-rays and blood work. His intestines were pushed upward in his abdomen. Fearing he may have a mass or blockage that could Not be determined from the ultrasound, we moved onto exploratory surgery. Come to find out no blockage or mass, but a very very bad case of pancreatitis. He receives nothing but diamond maintence food. No table food, treats etc. He ate this food for 3 to 4 days, 8 cups a day and it almost killed my gentle giant. He lost 10 lbs so far and is still in the animal hospital for another week receiving iv fluids and meds. I've contacted the company to only be told they ran their quality control and everything is with in normal limits. I've read several reviews of people that bought Diamond food with in this same time frame and their pets got sick as well. Please do Not feed this to your pets, it very well may kill them!	4	Years	Great Dane	Dog	160	Pound
<a href="#">EON-350266</a>	3/30/2018 17:36	Bully Slices Premium Dog Chews	Our dog <sup>(b) (6)</sup> chewed and consumed one bully slice in the course of one day about March 10, 2018. That evening, night and the next day she had severe diarrhea, but we weren't sure what caused it. She recovered. Then last Saturday March 24, 2018 we tried another bully slice which resulted in the same severe diarrhea. This time we knew what caused it because the bully slice was the only thing she ate other than her regular food. I called the manufacturer, Red Barn Products. The customer service rep took my information and said someone would contact me by the next day. To date, no one from Red Barn has called or followed up with me on the issue. I am not going to give any more of the bully slices to my dog and do not believe they are safe.	11	Months	Poodle - Miniature	Dog	20	Pound

<a href="#">EON-350263</a>	3/30/2018 15:48	Grain Free Easy to Digest Salmon Sweet Potato & Pumpkin Recipe	(b) (6) is an 8 year old intact male Bull Terrier who was first diagnosed with severe degenerative valve disease with moderate decrease in contractility on 8/21/17. At that time, he was started on Lasix, Vetmedin, and Benazepril. Taurine supplementation was recommended but not started. On 3/21/18, he presented to the emergency service for a sudden increase in respiratory rate and effort and was hospitalized for congestive heart failure. Echo findings on 3/22/18 included progressive valve disease and severe, progressive decrease in contractility, the latter of which may either be a component of dilated cardiomyopathy vs secondary to (b) (6) grain free diet (Nature's Recipe Salmon and Yam). Clinically, (b) (6) has been tiring more quickly recently. He has had weight loss (3 kg since 8/2017) despite a good appetite. Prior to his 3/22/18 presentation, he had a 2-3 week history of collapsing/fainting episodes, in which he would go limp and paddle - no loss of bowels. Health history includes allergies/dermatitis - previously on Apoquel - but otherwise no major illnesses or injuries. I have recommended adjustments to (b) (6) medications as well as taurine supplementation; he will continue the Nature's Recipe Salmon and Yam diet due to significant skin allergies when changing the diet.	8	Years	Terrier - Bull	Dog	26.3	Kilogram
<a href="#">EON-350262</a>	3/30/2018 15:08	OI Roy Complete Nutrition	I purchased OI Roy Complete Nutrition Dry Dog Food bag from Walmart. I fed this to my dog for two days. On the third day my dog would not eat the food and started to get sick. She started vomiting and was sick for 3 days before I took her to the vet. The vet was unable to determine the cause without running \$600 in blood work which we didn't have so she prescribed us with anti nausea medicine and antibiotics. We came home and she was unable to hold the anti nausea medicine in so we had to take her back to the vet for an injection. The injection also did not help. We could not give her the antibiotics because she couldn't even hold down a little bit of water without throwing up. On the 6th day of her being ill and not eating we had to lay our dog down she was dying. My dog was fine until I fed her the OI Roy dog food. I'm not sure if the food is contaminated but it definitely needs to be looked into as I am concerned I lost my dog from this.	12	Years	Pit Bull	Dog	60	Pound
<a href="#">EON-350260</a>	3/30/2018 15:00	Wellness Signature Selects Shredded Boneless Chicken & Beef Entree in Sauce	My cat has developed a severe problem with crystals in his urine. He has been eating Wellness Signature shredded chicken, etc. variety for several years. Last year he started peeing outside his litter box. This issue became worse as the year went on. I thought he was upset because I had many business trips. This year he has begun to pee on my clothes and the wall outside his box. He is also throwing up. I took him to the vet and he has severe amounts of crystals in his urine. The vet suggested trying a different food. Since beginning the food he has stopped throwing up and he no longer tests positive for crystals. I read that Wellness Signature changed their formula. Even the labels on the cans were a different color. My cat had nondifficulty with crystals or vomiting on the old formula. I contacted Wellness and was told it was not from their food because the food contains quality ingredients. I don't consider guar gum and xanthan gum quality ingredients. Clearly something changed when they switched the formula. They refused to acknowledge my complaint. I have since read of other cats getting very sick with this new formula. This company needs to be investigated. They deny any issue and clearly there are issues. Cat food should NOT make cats sick!						

<a href="#">EON-350257</a>	3/30/2018 9:08	Blue Basics Limited-Ingredient Grain-Free Formula Small Breed Salmon & Potato Recipe	Copy of what I emailed to Blue Buffalo and to Amazon.... I purchased a case of 12 Blue Basics Limited Ingredient Grain Free Small Breed Salmon and Potato from Amazon. I have opened 3 and all have a dry texture with whole pieces of corn. I am confused and worried that I did not get a true Blue Buffalo product. I have used this type for over two years and this is the first time I have ever seen corn in it. Your True Blue Promise states "No corn, wheat, or soy". All items in case have the same lot # 20191031U 14-12 62BCS11 with a Best By date of 2019 Oct 31						
<a href="#">EON-350247</a>	3/29/2018 21:40	Supreme Supper	After finding what looked like rubber in a can of Friskies, I've started forking through the other flavors of food before feeding them. Now I've found several pieces of something (plastic? seed husk? rubber?) in Supreme Supper canned Friskies.						
<a href="#">EON-350241</a>	3/29/2018 19:32	Kibbles 'n Bits Original Savory Beef & Chicken Flavors	My Manchester Terrier has been eating purchase Kibbles 'n Bits Original Dry dog food for approximately 8 months. I purchased a new bag Kibbles 'n Bits Original Dry dog food and continued his feeding routine. After 1 week of eating from this new bag my Manchester Terrier began vomiting up the food every time I fed him. I took him to the vet and he was given a complete exam inclusive of x-rays and lab work-up. He was given medication for bloating/inflammation and nausea/vomiting. I was told to discontinue feeding him Kibbles 'n Bits Original Dry dog food and he was place on a diet of rice and lean beef for the next week. He is finally able to eat a regular diet and has been changed to a high quality dry dog food. Since he has never had a problem eating Kibbles 'n Bits in the past and in lite of the recent recalls for the low levels of pentobarbital in the canned variety, I feel it to be more than coincidental that the dry made my Manchester Terrier sick.	18	Months	Terrier - Manchester	Dog	20	Pound
<a href="#">EON-350238</a>	3/29/2018 19:28	Rachel Ray Nutrish premium dog food Beef and brown rice recipe	Dog 1 experienced regular vomiting after eating for 2 days before changing food. <a href="#">EON-350214</a>	3/28/2018 18:16	Kibble 'n Bits Bistro 50lb bag	<p>In the afternoon of (b) (6) I found two of my dogs passed away. I took them immediately to the vet for cremation and toxicology testing. My vet performed a necropsy on the dogs and found a great deal of dog food in their stomachs and a red "grainy" substance consistent with the dog food. Naturally she asked what dog food I was feeding them. I indicated Kibble and Bits dry dog food. She told me there was a recall on Kibble and Bits, however in my research I found that the recall was on Kibble and Bits canned products. But my vet and I both agreed that it is not beyond the realm of reason that their dry dog food may have been affected as well. We both agreed that was too coincidental that two of my young and very healthy dogs passed suddenly with no signs or symptoms. My vet has been researching labs that would be willing to test both the leftover food and the stomach contents, she hasn't had a great deal of luck in finding one, so it was her suggestion that I contact the FDA to determine the best way to move forward. The Kibble and Bits canned food recall, based on my research contained the chemical/medication Pentobarbital, it is the feeling of my vet that this is the case simply because the death of my dogs was so sudden. She informed me that Pentobarbital is used to euthanize animals. Please be in contact with me to help me find answers to this, if it is indeed tainted dog food I would hate to see further dogs be hurt like mine were.</p>	5	Years	Terrier (unspecified)	Dog			

<a href="#">EON-350205</a>	3/28/2018 12:12	Answers pet food raw beef patties	dog has been on raw food diet in previous years. decided to supplement kibble with raw again. Purchased Answers Raw beef nibbles on 3/15/18. Slowly introduced 2 medallions at feeding...worked up to 5 nibbles (small medallions) at meal time over the course of 10 days, continuing to feed kibble. without any issues. Purchased Answers Raw beef patties (larger hamburger size) on 3/24/18. Fed one patty Sat. evening, fed 2 patties am, pm on Sunday, Mon. am one patty. Continued to feed kibble. Monday night, he threw up entire contents of stomach. Tues sick with loose stools, loss of appetite, lethargic, refused any food (at this time, I wasn't feeding anymore Answers Raw food) didn't drink hardly any water. He needed to go outside about every hour. Early this morning, 3/28/18 5:00 am he began with bloody stools and bloody vomit. I took him to the Vet as soon as they opened. He is diagnosed with food poisoning. The vet, (b) (6) said they would try to collect a stool sample to submit or have tested if the company wanted that, but since the stool is mostly liquid blood, difficult to collect and the fee to test it would be 150.00 on top of the 432.00 vet bill I just paid. When I got home, I tried calling the phone number on the product box, but got an answering machine. I left my name and contact info. I then called the pet food store where purchased and told them what has happened.	9	Years	Terrier - Kerry Blue	Dog	31	Pound
<a href="#">EON-350193</a>	3/27/2018 22:36	SIMPLY NOURISH - Chicken Salmon & Sweet Potato Stew; GRAIN FREE	I was getting ready to feed my puppy some canned Simply Nourish dog food (Chicken, Salmon, & Sweet Potato Stew; Grain Free) and looked inside and noticed there was something blue near the bottom of the can that I had not noticed earlier when I had already given her a small portion. I proceeded pulled out a piece of wadded up, thick, blue plastic approximately 3" x 6". I am quite concerned that this is not an isolated incident and there may potentially be other cans from the same lot with plastic in them.						
<a href="#">EON-350192</a>	3/27/2018 21:12	Golden Rewards Duck Jerky Recipe 16 ounces	I did not know that these treats were effecting my dog at the time. When she first started showing signs of illness she pretty much stopped eating food and then she began drinking water excessively and vomiting. After about a week or so I took her to the vet today where they did blood work and confirmed that she had acute kidney failure. These duck jerky strips were the only new food introduced to my dog.	11	Years	Mixed (Dog)	Dog	14	Pound
<a href="#">EON-350175</a>	3/27/2018 16:56	Milo's Kitchen Steak Grillers Recipe with Angus Steak	(b) (6) became ill on 3/14/2018 (2 days after our other dog (b) (6) with uncontrollable bloody diarrhea and vomiting and saw the doctor on 3/12018. He had been receiving Milo's kitchen Steak Grillers Recipe dog treats for several weeks as a treat. I saw the recall on 3/24/2018. <a href="#">EON-350174</a>	3/27/2018 16:40	Loving Pets Natural Value 100% all natural treats Sweet Potato Krisps	I gave both my dogs this treat (Loving Pets Sweet Potato Krisps), but only one reacted in a panic. (b) (6) acted as if she was choking, and kept using her paw to try and remove the treat from her mouth. I opened her mouth and saw pieces of treat stuck to the roof of her mouth on each side, so I pulled a small piece from the roof of her mouth. She continued to panic, struggling to get her paw to remove the treat. I tried again to remove any pieces, and after a few seconds, she calmed down, and went for a drink of water. I also noticed my older, second dog, (b) (6), trying to eat her small piece, which got stuck on the side of her gums. I pulled it off, and threw it into the trash can. I then took the bag of treats and threw them away in the trash, along with those I had poured into a container for eating as a treat also. Treat called "Sweet Potato Krisps" by Loving Pets, Item # 8029, Net Wt. 12 oz. (340.2g), Natural Value 100% all natural treats, low calorie, low fat, soy free, gluten free, wheat free, Healthy Treat for Dogs, no Additives, No Preservatives, 100% made in the USA, Ingredients: Sweet Potato, Rice Flour. 8 42982 08029 4, Lot 041719, Exp. 04/19Loving Pets Corp., Cranbury, NJ 08512. www.lovingpetsproducts.com There is a warning on package "Please supervise your pet when giving any treat." Treats are listed on package as air-puffed. They seem sticky to the touch, after pulling the pieces from their mouths. I will never give them this treat again, as I feel it is a danger to their life, because (b) (6) was gagging and struggling to remove it from her mouth with her paws, as if she was choking to death. Thank you.	1.6	Years	Terrier (unspecified)	Dog	12	Pound
<a href="#">EON-350173</a>	3/27/2018 16:12	Milo's Kitchen Steak Grillers Recipe with Angus Steak	I believe that (b) (6) became ill due to eating Milo's Kitchen Steak Grillers as a daily treat, and had to be taken to the vet for uncontrollable vomiting and diarrhea on 3/13/2018. Other dog (b) (6) also became sick 2 days later with uncontrollable bloody diarrhea and vomiting and went to vet on 3/15/2018. (b) (6) had to be taken back to vet on 3/16/2018 for vomiting and diarrhea, lethargy, no appetite, and dehydration. After my second dog became ill, I began looking for pet food recalls and saw recall for Milo's Kitchen Steak Grillers. The UPC is the same, but the Best Used By date is APR 27, 2019, one day after the listed recalled item of APR 26, 2019. I believe that APR 27, 2019 should be checked/tested also.	2	Years	Chihuahua	Dog	21	Pound
<a href="#">EON-350159</a>	3/27/2018 15:20	Wellness Core Chicken & Turkey Pate	After Wellness changed the formula (and can label) for their Wellness Core Chicken & Turkey Pate, my cat had serious vomiting and diarrhea issues. I have read several other cat blogs with other cat owners having the same issue. Some even hospitalizing the animal. This seems to be happening to several Wellness canned cat food products from all the various complaints I have read. This happened last year, but I am reporting now because of the growing concern that I am reading so many others complaining too. I see a pattern.	12	Years	Unknown	Cat	10	Pound

<a href="#">EON-350158</a>	3/27/2018 15:20	Zignature Kangaroo Formula	At the time of diagnosis (10/31/17), (b) (6) was a 13 year old female spayed Labrador retriever who had been maintained on a Zignature Kangaroo formula. She presented with a history of a progressive cough which, prior to presentation, became productive and she coughed up a small volume of pink foam (possible pulmonary edema). On examination she had a 2/6 left apical systolic heart murmur and on echo diagnosed with advanced dilated cardiomyopathy with severe left ventricular dilation, moderate to severe left ventricular systolic dysfunction, and moderate to severe left atrial dilation. Thoracic radiographs were suspicious for early congestive heart failure. A whole blood taurine level was submitted and was low at 168. She was treatment with furosemide, benazepril, pimobendan, spironolactone, taurine and l-carnitine and her diet was changed to Royal Canin Early Cardiac. At her recheck in 2/26/18, (b) (6) heart had improved significantly with now mild dilated cardiomyopathy with normalized left atrial dimensions, mild left ventricular dilation and low normal left ventricular systolic function. The furosemide was able to be discontinued at this time.	13	Years	Retriever - Labrador	Dog	33.18	Kilogram

<a href="#">EON-350134</a>	3/26/2018 19:44	Liver & Chicken Dinner	Found a piece of foreign black stuff in a can of Liver & Chicken Pate food. Looks like rubber or maybe a soft type of plastic. Then, when sending a message to Friskies/Purina I discovered that the bottom of the can is stamped twice, with two different lot codes. I wonder if this was recalled and then put back out for sale?						

<a href="#">EON-350130</a>	3/26/2018 18:52	Brenda Watson's Vital Planet Natural Pet Care Experts Flora Cat Daily Probiotic	I purchased 2 containers of Flora Cat daily probiotics from a seller on Amazon - shipped and sold through Amazon. When I opened one, I first noticed that the inner seal came off extremely easily; usually I have to use a knife to cut it off. I then noticed that the product, which is a powder, was white in color; not at all like it usually is. I have been using this product for my cats for approx. a year - this product/powder is usually tan. It also was missing the scooper inside the container and the dessicant packet too. I then noticed the labels on the outside of the container were different looking than the labels on the previous container I had just discarded the day before, which I had purchased at a local store. I then called the distributor from the telephone number on the old container and asked if they had changed their product in any way. Did the color change? Did they stop putting scoopers inside? I was told NOTHING HAS CHANGED. However, they seemed disinterested when I told them I felt this product was fake and/or tampered with. I then contacted Amazon with same info - they DID reimburse me and told me I did NOT need to return the product. I still have both containers - one opened, one unopened and still sealed. I went back to my local store, purchased more and they are as they should be - tan powder, scoopers and dessicants inside. Inner seal had to be cut away. I truly feel the original product was removed and replaced with an unknown product. I do not know if it would be harmful to my cats because I did not, thankfully, give it to my pets. But, I feel this seller on Amazon should be investigated. Seller was SportingDoc.						
<a href="#">EON-350125</a>	3/26/2018 13:52	there are no package labels on the bags	I pick up an order from Top Quality dog Food at one of their delivery locations on 3/17/18. When I got home and unboxed the order, some of the food was in bags completely open. I gave my dog 5 frozen hearts with her dinner and within a short time she started to have bad gas. As some of the hearts started to thaw, I started to smell a foul smell and some of the hearts appeared brown in color. Then I realized that the hearts were bad and had caused her the gas. She did throw up later that evening, but has fully recovered. I put the bag back in the freezer which is where they are now.			Shepherd Dog - German	Dog		
<a href="#">EON-350124</a>	3/26/2018 12:48	The Farmer's Dog Brooklyn NY	We get fresh food from a company called Farmer's Dog in NY. As I was serving the food to my dog I noticed a piece of metal in the food - it is a sharp long piece of metal. I have let the manufacturer know as well. I have taken pictures and sent them the pictures too.						

<a href="#">EON-350120</a>	3/26/2018 12:24	Fromm Four-Star Nutritionals(R) Beef Frittata Veg (R) Food for Dogs. A grain-free entree made with beef peas eggs and potatoes together with fresh fruits & vegetables	Was feeding Fromm Grain-Free dog food - most commonly the Beef Frittata Veg and the dog developed urinary incontinence. Assuming it was old age, I kept feeding the same food. Brought the dog to the veterinarian and had it checked for bladder infection or stones, and dog's health was good. They wanted to put the dog on a drug but I declined and decided to go the diaper route. Decided to try different dog food, again grain-free. Dog didn't like them. So I started making food for the dog and the dog's urinary incontinence has improved substantially. Formerly I would have to get up every two hours at night to let the dog out, or I would be cleaning up urine leakage. Now the dog can make it 6 hrs with out urinary incontinence. I've noticed that on the Fromm Beef Frittata Veg dog food that Potassium Chloride is high up in the ingredient list - before cranberries and blueberries - followed by salt. There are no statements regarding sodium/salt in the guaranteed analysis. This bag is "Best By 02/16/2019 B09 13:17" bar code 72705 11414. I do not observe any other lot code information on the package.	15	Years	Chihuahua	Dog	16	Pound

<a href="#">EON-349768</a>	3/20/2018 14:24	Beneful Playful Life	I bought a bag of Beneful dog food 2 weeks ago from my local grocery store and within about 24 hours my oldest (b) (6) stopped eating, drinking and had bloody diarrhea. I took her to the vet first and she was diagnosed with pancreatitis & hemorrhagic gastroenteritis. She was treated with a heavy dose of antibiotics and was released from the vets office after a day and a half. Within the next few days my other dog (b) (6) began showing the exact same symptoms and we decided to take her to the vet as well. She was very bad off and we were not sure if she was going to make it through the weekend. The vet thought that it was too much of a coincidence for both of them to show the same symptoms so close together. We discussed their diet and the only common denominator was the dog food. We came to the conclusion that the dog food may have had a bad batch and/or was tainted in some manner. After a very long week and roughly \$1800 from 2 different vet offices, my dogs are happy and healthy once again. I tried reaching out to baneful both through email and through their 1-800 service however that has not gotten me anywhere. I do not have any of the dog food or the bag it was sold in but I am 100% certain it was the root cause of all of this mess.	7	Years	Bulldog - American	Dog	75	Pound
<a href="#">EON-349766</a>	3/20/2018 11:44	Blue Basics Grain Free Turkey and potato recipe	(b) (6) had a bladder issue, crystals and protein in urine, which required treatment may be recurrent will need further test. found out that the dog food he was on was not recalled but had alleged high levels of lead which could cause urinary/renal problems. Bought several bags, Petco let me return the last bag as they have a money back guarantee but said it wasnt recalled. Any medical problems he had before were unrelated and has digestive issues which is why we switched to this food in the first place.	1	Years	Terrier - Boston	Dog	24	Pound

<a href="#">EON-349765</a>	3/20/2018 11:44	Taste of the Wild Pacific Stream Canine Formula with Smoked Salmon A grain free diet	We have purchased Taste of the Wild Bison formula over the last few years but switched due to some allergies our dog was experiencing. (lots of itching, anal glands were inflamed) We switched to Taste of the Wild Salmon food and purchased that bag from (b) (6) Pet and Country on February 20th. Within a few days, our dog started throwing up immediately after he would eat in the morning. He typically would eat once in the morning and once in the afternoon. He was throwing up in the morning within minutes after eating but was able to keep food in during the afternoon feeding. That lasted for about 2 weeks. He started throwing up after the afternoon meal as well and it was at that time we decided to get him off of the food and try a different brand. His itching was still pretty intense and he was now not able to keep food in him after his meal. He was eating his milkbone treats without an issue but couldn't keep down the Taste of the Wild Salmon. He also started drooling a lot while he was eating, had loose stool and as he was eating, he was dropping a lot of the food on the ground around his bowl. He would eventually come back to finish the food, only to throw up immediately after again. On Friday, March 16th, 2018, we purchased a new brand of food. Our dog was given some to eat and continued to want more and has not thrown up since. We threw out the rest of the Taste of the Wild Salmon food (other than 2 pieces).	5	Years	Retriever - Labrador	Dog	95	Pound
<a href="#">EON-349758</a>	3/20/2018 8:16	Nudges Jerky cuts made with real chicken	After consuming nudges treats about 1 a day for several days. He threw up twice in the middle of the night. When we awoke and found him he was lethargic and could not stand. He went to vet who gave nausea medicine. He would not eat or drink. I gave him water with a dropper for 2 days. I took him to a different vet on Friday. She done blood work and said he had pancreatitis. Gave antibiotic and fluids. (b) (6) began recovering on Saturday. He has not made a full recovery. (b) (6) was happy, galloping and full of energy prior to these treats. Our other dog (b) (6) vomited twice and he has recovered.	17	Years	Lhasa Apso	Dog	20	Pound

<a href="#">EON-349732</a>	3/19/2018 15:32	Evangers Grain free Catch of the Day Hand Packed whole Uncut sardines, Evangers Grainfree Wild Salmon HOLISTIC Formula•All natural	<p>On 2/21/18 I fed (b) (6) Evangers whole uncut sardines, and on 2/22 I fed him Evangers wild salmon canned dog food. He became lethargic and then began to display uncharacteristic behaviors(urinating in the House with all 4 feet on the ground) . By 2/23 I was taking him outside constantly to prevent accidents. His legs/gait became rigid and awkward. He would lose his footing for no reason. On 2/24 I stepped over him and he cried out and was whimpering like I'd never heard him do before. I thought maybe I had stepped on his toe or something. The next day 2/25 he barked when he heard someone at the door(as usual); I opened the door to accept a delivery and as I shut it he cried out and I turned around. He was 3 feet behind me on his back like a turtle shaking and whimpering like someone had kicked him.</p> <p>The next day 2/26 he had 2 more episodes like that while I was looking; then he suddenly started having a grand mal seizure. We rushed him to the vet around the corner who referred us to (b) (6) who thought it was a brain tumor, and referred us to a specialist.</p> <p>The MRI and spinal tap at their recommendation were not financially possible for us. All his blood work came back normal. He spent the night in the emergency center and we brought him home the next day(2/26). He didn't have any seizures for 2 days but he was medicated with Keppra. Then he started having seizures again by Friday night. The seizures got progressively more frequent. Until I was cleaning his water fountain on Friday 3/9/18 and realized I could open the motor where I found a water-logged piece of sardine wrapped around the propeller blade.</p> <p>I bought him a new water fountain(made of ceramic instead of plastic) he hasn't had any seizures since and is not medicated with anything except cbd oil. He is slowly regaining his house training, ability to walk, etc. He still has facial twitches and keeps drinking water until he Vomits if left unsupervised.</p>	8.9	Years	Bulldog - French	Dog	29	Pound

(b) (6) only ate a little and walked away. (b) (6) finished hers. Within minutes both dogs had seizures. (b) (6) lasted 5 or 10 minutes. His tongue was hanging out, he was frothing at the mouth, he had a bowel movement and his entire body was violently shaking. (b) (6) seizures never stopped. She also bit a hole in her tongue and keep biting her tongue when she was seizing. We immediately took her to the Vet and they had her on anti seizure medication. We were scheduled to bring her back at 8 a.m. the next morning. At 6 in the morning she was seizing and bleeding. I called the vet and we took her right in. She never stopped seizing and was euthanized that afternoon. Vet said that the cause could possibly be a toxic mold that you can not see. Food would have to be tested to see if it was that. He also said the it could be 100 other things and the only way to tell was to test the food. Merrick said that because the food is grain free it couldn't be mold and so it couldn't be their food. She suggested that maybe it was the water etc. I tried to explain that the vet did not definitely say that it was mold. He said it could possibly be mold or 100 other things. They weren't interested in hearing this. They said their food was tested at the plant and their was no problem. Both dogs had seizures within minutes of eating this food from a new bag that was just opened so there was definitely something wrong with the food.	11	Minutes	Sheepdog - Shetland	Dog	25	Pound

<a href="#">EON-349608</a>	3/16/2018 16:36	ZuPreem Natural	I have purchased ZuPreem bird food back in dec 2017 from bird dog depot on amazon. As of Jan 2018 (b) (6) had been acting "Off" showing aggression, high alertness, etc. I purchases ZuPreem from Petco one week ago and I notice the food and the coloring on the bag is different (correct) from the one purchased at amazon. The food on amazon is much smaller than it is supposed to be and the bird on the front on the bag is a darker color. I took (b) (6) to the vet and they did a culture and a gram stain. They found bacteria in his crop and E-coli on his culture! I have made Zupreem aware that they may have counterfeiter food out there from the seller on amazon and they seemed uninterested to hear.	4	Years		Other Birds	65	Gram
<a href="#">EON-349606</a>	3/16/2018 12:08	Nutro Feed Clean Wholesome Essentials Farm Raised Chicken Brown Rice and Sweet Potato Recipe Senior	We purchased a new bag of Nutro Wholesome Essentials Chicken, Brown Rice and Sweet Potato Senior. About 4-7 days after feeding this new bag of food the symptoms started. (b) (6) was the last dog in our house to present with symptoms but with the least severe. Excessive thirst was the first sign. We had to start taking him out to urinate at least every 2 hours to urinate. He also has a neurological episode where he was wobbly standing up, walking and couldn't gauge distance from objects. He never rejected the food but just kept drinking large amounts of water and urinating. I took him to the vet on March 6th for a urinalysis and complete blood work. He presented with low white blood cells, low protein and high protein in his urine. He was completely healthy up until these symptoms. We switched all the dogs to a bland diet of chicken and rice. All 3 began to perk up immediately. The excessive thirst drastically decreased within 24 hours. I'm concerned it is the food after reading reviews from other customers with dogs that presented with similar symptoms. We have been feeding 2 of our dogs Nutro brand for about 6 years and have never had an issue until now.	13	Years	Shepherd Dog - Australian	Dog	52	Pound
<a href="#">EON-349605</a>	3/16/2018 11:52	Nutro Feed Clean Wholesome Essentials Farm Raised Chicken Brown Rice and Sweet Potato Recipe	We purchased a new bag of both Nutro Wholesome Essentials Chicken, Brown Rice and Sweet Potato Adult. About 4-7 days after feeding this new bag of food the symptoms started. (b) (6) was the first dog in our house to present with symptoms but with the most severe. Excessive thirst was the first sign. Our 1-year-old house trained dog started having urine accidents in the house during the day and while we were home. We had to start taking her out to urinate at least every 2 hours or she would have an accident in the house which was out of character for her. She also started having accidents in her kennel at night. She never rejected the food but just kept drinking large amounts of water and urinating. I took her to the vet on March 1st for a urinalysis and x-rays to look for bladder stones as I saw crystals on her UA I did myself at work. She was completely healthy up until these symptoms. We switched all the dogs to a bland diet of chicken and rice. All 3 began to perk up immediately. The excessive thirst drastically decreased within 24 hours. I'm concerned it is the food after reading reviews from other customers with dogs that presented with similar symptoms. <a href="#">EON-349604</a>	3/16/2018 11:44	Nutro Feed Clean Wholesome Essentials Farm Raised Chicken Brown Rice and Sweet Potato Recipe	<p>We purchased a new bag of both Nutro Wholesome Essentials Chicken, Brown Rice and Sweet Potato Adult. About 4-7 days after feeding this new bag of food the symptoms started. (b) (6) was the second dog in our house to present with symptoms but with the most severe. Excessive thirst was the first sign. Our 7-year-old house trained dog started having urine accidents in the house during the day. When we were home she was asking to go outside about every 30 minutes. When outside, she would constantly squat to urinate about every 20-30 seconds even though she wasn't actually urinating. She would also drink to the point she would throw up. After a couple days, she started rejecting her food. She would slowly eat it but with disgust. We then switched her to the senior Nutro Wholesome Essentials Chicken, Brown Rice and Sweet Potato we had for our other dog. She ate that just fine for about 4-5 days. She then started rejecting that food and vomiting. I took her to the vet on March 6th for blood work and urinalysis. She reported with low white blood cell counts, high liver enzymes and crystals in her urine. She was completely healthy up until these symptoms. We switched all the dogs to a bland diet of chicken and rice. All 3 began to perk up immediately. The excessive thirst drastically decreased within 24 hours. We have more blood work scheduled to monitor the white blood cell count to make sure she is recovering with no permanent damage. I'm concerned it is the food after reading reviews from other customers with dogs that presented with similar symptoms. We have been feeding 2 of our dogs Nutro brand for about 6 years and have never had an issue until now. Our otherwise healthy dog is lethargic, uninterested in play, vomiting and unhappy.</p>	7	Years	Retriever - Golden	Dog	51	Pound

A small portion was microwaved for about 1 minute and then fed. Early the next morning (less than 12 hours later), vomiting and diarrhea was noted which continued throughout the weekend. The vomiting was not noted past the weekend but the diarrhea has persisted. The appetite is also reduced. (b) (6) presented for veterinary evaluation on 3/14/18.	9	Years	Chow Chow	Dog	56.9	Pound

<a href="#">EON-349561</a>	3/15/2018 18:00	Gravy train with beef chunks (2 cans unopened), Gravy train Tboneflavor chunks, Gravy can lamb rice chunks	<p>My dog (b) (6) began acting "not normal" around (b) (6) that's when I noticed she wasn't acting her normal self by laying around more and eating less. She got to the point where all she wanted to do was sleep and no longer playing or even wanting treats she loved. She seemed confused, I noticed she was limping like her back legs was hurting She had no energy, she began vomiting, drinking less water and was no longer interested in things she normally loved. Got to the point I was very concerned..</p> <p>On (b) (6) I took her to the vet. He did a fecal test and overall checkup and nothing seemed to be seriously wrong , he thought maybe she got into something causing her stomach problems. He put her on antibiotics and probiotics. She took them 7 days and nothing seemed better she actually got worse by her abilities she was no longer using back legs. All she wanted to do was lay in corner of back yard with no activity, she got to the point she wouldn't even drink water and had no energy to move. It was the saddest thing to watch for myself and my children. I have video to show how week and short breath she got and short shallow breathing . Her eyes twitching back and forth and muscles jerks. It was devastating. He only wanted to lay in corner of back yard by herself..i believed she was dying, knowing I couldn't afford vet again... I rushed her back to vet again (b) (6) He did a heart worm test and came back negative. Her blood work showed she had somethings going on and her kidneys shutting down. He told me I would have to put her to sleep if I didn't have the money to start her treatments.. but He advised me getting lots of fluids in her would most likely turn the kidney around and she would start regaining her strength., He said he sorry he didn't see anything the first time leading her to get that bad. She had no way to get poisoned since she never left the house or back yard , she was fine weeks before and nobody thought it was this bad until days passed and she got more sick. It shocked the vet I believe even that she got this bad in a week. I don't see how healthy dog goes to that point in 2weeks is all I kept saying .He said he could do a X-ray and see if anything found. No masses was found so he suggested fluids for few days and steroids. So we did that. She was getting little more better and able to stand and walk some on (b) (6) when I went to see her . Then (b) (6) the vet said she blue lined at 830am, he was going to change out her IV and seen she passed. No real explanation of why or what caused all this so sudden but it was a sad and horrible experience for my family to see our dog become so ill for with no answers. I then see a recall for the food she ate the past couple months up until her passing kibbles n bits and gravy train. I feel this is the reason for her death!</p>	6	Years	Siberian Husky	Dog	69	Pound

<a href="#">EON-349554</a>	3/15/2018 15:12	Kiwi Peak New Zealand Lamb Recipe	I started feeding my cat Ziwi Peak Lamb canned cat formula about two weeks ago. My cat was starting to sleep more and become lethargic but I continued to feed him the Ziwi Peak Lamb (not making the connection). On Sunday, March 11, 2018, my cat stopped eating and had become extremely weak and withdrawn. I thought he was dying. I took him to the vet the following day (Monday, March 12) and my vet agreed that my cat wasn't acting normally. The vet drew his blood and urine. All the tests came back normal. At 1 pm on Tuesday, March 13th I decided to to give him the brand food he was eating previously and he immediately began to eat. His energy levels are returning to normal and he is no longer weak or withdrawn. The way he was acting on Ziwi Peak leads me to believe there was some type of sedative or euthanasia drug mixed in the food. I'm convinced if I wouldn't have discontinued the Ziwi Peak, my cat would have died.	14	Years	Domestic Shorthair	Cat	6.2	Pound

<a href="#">EON-349327</a>	3/11/2018 11:36	Golden Reward Chicken Jerky Recipe	Within a half hour after eating 2 chicken jerky treats, (b) (6) began acting like she was on some kind of hallucinogenic drug--panting, pacing, fearful of furniture. Ninety minutes later I could hear her stomach was gurgling from across the room. This groups of symptoms lasted approximately 12 hours. The next day she began to feel hot to the touch. She was also listless and isolating herself which is completely out of character for her. She is generally a bundle of exuberant joy. The third day she was very hot and I took her to the vet. She had a fever of 104 and the vet also heard the stomach gurgling. The vet administered shots of antibiotics, steroids, and something to sooth her tummy. He also provided antibiotics and tummy medicine for the next 5 days. That night she was burning up with fever. On the fourth day, she slept most of the day and her temperature began to break. Now, on the fifth day she is finally returning to her perky, joyful self but she is still sleeping more than usual.	1	Years	Mixed (Dog)	Dog	32	Pound
<a href="#">EON-349324</a>	3/11/2018 11:00	Alpo Purina *PRIME CUTS WITH LAMB & RICE 100% complete & balanced for adult dogs	I fed him half a can of Alpo (Purina) Prime Cuts with Lamb & Rice Net weight 13.2 oz. Hours later he began showing the following symptoms. Vomiting, diarrhea, loss of appetite, and weakness.	13	Years	Retriever (unspecified)	Dog	18	Pound
<a href="#">EON-349300</a>	3/10/2018 20:28	Red Barn Bully Stick	<p>I purchased an individual Red Barn bully stick from Kroger in (b) (6), for my dog on August 9, 2017. Within 6 hours of my dog consuming the bully stick, she became lethargic, could not jump move naturally, and experienced heavy breathing. Then, 12 hours after consuming the bully stick, she began vomitting and had bloody diarrhea. During this time, she would try to drink water since she was dehydrated, even out of my own water cup. Upon drinking the water, she would vomit within seconds.</p> <p>I immediately called our vet, and I dropped my dog off for observation. Our vet called me within a few hours and stated that my dog had ate something that basically "poisoned" her, and her organs were starting to shut down. She asked if our dog ate anything that would have caused these issues, and I said we gave her a bully stick the night before, and the symptoms began within hours after consuming your product. The vet did x-rays and did not see an obstruction, but her liver tests came back the next morning. Her liver enzyme tests came back extremely high above normal range (one test was almost 10 times above normal).</p> <p>Our vet pumped our dog with fluids, immediately started detoxing her liver, and these treatments saved our dog's life. She remained at the vet for 3 days for observation. It cost my husband and I \$1000 to save our dog's life.</p> <p>We believe the Red Barn bully stick we purchased almost killed our dog. After receiving a voicemail this evening from Kroger stores stating that the Red Barn bully sticks were recalled due to possible salmonella contamination, and the dates ranged from March 2017 until the present.</p>	3.5	Years	Retriever (unspecified)	Dog	50	Pound

<a href="#">EON-349296</a>	3/10/2018 18:20	Purina Kit & Kaboodle	Her eyes dilated completely. She was afraid to move & had impaired motor control. This began yesterday afternoon, but she is beginning to resume normal appearance and control this evening, though she still will not come out of her room. She had eaten much of the bag of Kit & Kaboodle when this had occurred. She refuses to eat any other food, so did not eat anything else that could have caused this. She usually drinks more water than a cat normally does, but refused to drink water or eat anything after the symptoms began. She has begun drinking water again today and is eliminating normally.	2	Years	Unknown	Cat	5	Pound
<a href="#">EON-349289</a>	3/10/2018 17:16	National Geographic Brand Timothy Hay with nutritious toppings rabbits chinchilla and guinea pig treats	(b) (6) was an active guinea pig, a new bag of National geographic Timothy hay was opened and placed in her hay bin. approximately 36-48 hours later she died (Date of death- (b) (6) ). 24 hours after giving her the new hay, we did notice she was not eating at her usual pace but since it was only a day, we did not worry. The next day she was dead. Thinking she died of natural causes, we gave the almost completely full bag to our friend who has a pet bunny. On Wednesday morning they gave the bunny the hay, the bunny died Thursday afternoon (Date of death (b) (6) ). The bunny was only 2 years old and in good health. The common part is both were given the hay and both died shortly after consumption, it seems to suspicious to be a coincidence. We have contacted the retailer, given the hay back to them and they have promised an investigation, but I cannot stand the thought of other animals suffering. Since these are not animals typically taken to the vet, I wanted to report the issue.	3	Years		Guinea Pig	1.5	Pound
<a href="#">EON-349237</a>	3/9/2018 23:48	Rachel Ray Nutrish Super Premium pet food for cats	Cat started leaving drops of blood around the house. I found that it came from his urethra due to the smell and blood in the litter box. Before we could get him to the vet he started being very sluggish and shaky. After taking him to the vet, it was found that he had a blockage that had been building up over time and was causing kidney failure. The doctor stated that it was his food, Rachel Ray Nutrish dry food. He stated that most cats cannot breakdown the high amount of minerals that is in the food and therefore caused the build up of the blockage. He is still at the Vet's office and it is unknown if he will recover at this time.	3	Years	Unknown	Cat	15	Pound
<a href="#">EON-349230</a>	3/9/2018 21:52	Rachel Ray Nutrish Super Premium for Cats Real Chicken and Brown Rice Receipt	I purchased Rachel Ray Nourish Dry Cat Food - Chicken and Rice on Sunday, March 4th for my cat. He had his first bowl Monday morning. Monday evening he began to drink water excessively. Tuesday evening he started to have diarrhea. We couldn't figure out what was going on. He had been to the vet less than a month ago for a well check up and he was in excellent condition. Thursday he was drinking water excessively still, having diarrhea and started to vomit in the middle of the night. I called my vet first thing Friday morning and he started to ask questions to see what, if anything, was different from last week. The only thing that was different was the food. He told me to stop feeding him it immediately, contact the company and store, and to contact you all. He said there had been problems with Rachel Ray animal products before.	4	Years	Mixed (Cat)	Cat	15	Pound

<a href="#">EON-349177</a>	3/9/2018 12:16	IAMS Proactive Health Minichunks	I had an upcoming surgery where I would not be allowed to lift much. Hence, I bought (b) (6) a new bag of IAMS Minichunks prior to the surgery. (She is 8 and has eaten IAMS her entire life without issue.) She began vomiting clear water and having diarrhea on Feb. 21st. I went into the hospital on the 22nd and asked my roommate to keep me informed. She had additional incidents of diarrhea in my absence. When I returned from the hospital, on Saturday, she had blood in her stools and was eating/drinking very little. On Sunday, after several vomiting clear liquid, I took her to the emergency vet where she stayed two days on fluids being tested for pancreatitis and hemorrhagic gastroenteritis. She refused to eat there. Once she was stable, I brought her home as they were simply guessing as to what might be wrong. She was given probiotics, antibiotics, anti-nausea drugs. I began boiling chicken for her. As she would get better and return to her dry food, she would get sick again. This time with a new symptom -- vomiting a pink gel like substance. Then we would return to chicken and she would recover. There were a total of three relapses. I posted on FB what was happening and a friend reached out to ask about her as her dog was also having problems. We realized they were eating the same kind of food. Then her boyfriend found the Consumer Reports website with several complaints about these very symptoms from this very food since December. I threw the IAMS out and a veterinary friend in Houston recommended Science Diet. There have been no incidents of vomiting or diarrhea since moving to the new food. My friend has had similar results with her dog in (b) (6) When I called IAMS, I was told they will refund the \$18 purchase price with no regard thus far to the \$1253 in vet bills though I can expect another call from them. I was also told they were not receiving any other complaints. However, it's all over Consumer Reports since December and on their own FaceBook page. It feels very sketchy. I was told I would be contacted by the Pet Health and Safety Team.	8	Years	Mixed (Dog)	Dog	38	Pound

<a href="#">EON-348983</a>	3/7/2018 17:40	Purina ALPO Chop House - 6 Filet Mignon and Bacon & 6 Roasted Chicken and Top Sirloin.	<p>I fed both of my dogs approximately half a can each of Purina Alpo Chop House canned wet food. Shortly after eating approximately 5 minutes or so the Dachshund appeared to be very uncomfortable. She would whine, then lay down, get up, and flop back down. She repeated this about 4 times. The last time it was apparent she wasn't in control of the falling. Her breathing was extremely labored and she was shaking. I also noticed her face and neck were swelling. I removed her collar and she began to seize. She was completely stiff and her tongue came out of her mouth swollen and blue. Her gums were also blue. I thought she was going to die. She was clearly not getting oxygen. She seemed to regain consciousness and started panting. Within 15-20 minutes the swelling went away and the color in her tongue and gums came back. She seemed to go back to normal. Her breathing slowed to regular and she drank some water and then slept for a few hours. Later in the evening she begged to eat so I fed her again. Approximately half a can of the same food. Within 5 minutes I noticed her face and neck swelling again. She repeated all the above mentioned symptoms, lasting about the same amount of time.</p> <p>It was only after this feeding did I realize her first onset of symptoms were also within minutes of eating this food.</p> <p>My other dog did not experience symptoms this severe but he was very lethargic, restless, visibly uncomfortable. Lasting for several hours.</p> <p>We have been feeding them this food for over 3 months without incident. Both cans used in these feedings were from a new case, just purchased and opened.</p>	8	Years	Dachshund - Standard Smooth-haired	Dog	25	Pound
<a href="#">EON-348954</a>	3/7/2018 13:00	Purina Friskies Poultry Platter Pate 13oz	<p>My friend would order 6 cases of Friskies large cans of Poultry Platter from Amazon to be delivered to my Animal Sanctuary which are special needs cats after I would give them the cans of food I would notice an increase of vomiting and Diarrhea, bloody stool. I could not figure out why this has been happening from the time that they started eating this product back in January I believe, I thought maybe the flu or something else had them down but after a month of antibiotics nothing changed until today I found the problem they have been ingesting . I actually found Black plastic today found in this food. I had noticed this before however I thought maybe it was part of the bird or other ground up product but today I finally analyzed and noticed that it was a foreign object. I have 68 cans left and more ordered yesterday. My friend is contacting Amazon today to let them know.</p>	5	Years	Mixed (Cat)	Cat		
<a href="#">EON-348952</a>	3/7/2018 12:16	Abound Variety Pack: Salmon & sweet Potato stew in gravy Turkey stew with vegetables & gravy Chicken & beef dinner in gravy	<p>Over the last 2 weeks when fed Abound wet food he would vomit. This started as a very small amount at first &amp; progressively got worse over the 2 week period. (b) (6) was given dry food &amp; a small amount of treats during this time with zero reaction. Every time he was served the Abound he would vomit within 10 -20 minutes &amp; refuse to touch the rest of his wet food. He has been fed Abound since he started solid food as a kitten &amp; loves it. We have never had an issue before. I took him to the vet on 3-5-18 where he was subjected to 3 injections &amp; bloodwork. I was advised by the vet to stop Abound &amp; start Purina One wet food. I have done this &amp; his issues have resolved &amp; his appetite has returned. The vet bill was \$194.90 for this. The vet says that they change recipes sometimes &amp; have no way to determine exactly what it was in the Abound that made him sick. I don't want other pet owners to go through this with their animals.</p>	2.5	Years	Maine Coon	Cat	17.93	Pound

<a href="#">EON-348900</a>	3/6/2018 18:08	Gravy Train Chunks In Gravy with Beef Chunks	I was feeding Gravy Train to (b) (6) since he was 8 weeks old, as well as to his housemate (b) (6). (b) (6) had several bouts of diarrhea that would resolve with treatment. On (b) (6) he started having severe watery diarrhea, was lethargic and dehydrated and was taken immediately to the veterinarian where treatment for gastroenteritis was immediately initiated. On (b) (6) (b) (6) passed away acutely at home after becoming very thirsty, having dilated pupils and not acting right for a short period of time. (b) (6) had to be taken to the veterinary hospital again on (b) (6) due to continues vomiting and diarrhea. (b) (6) was in the hospital until he passed away the night of (b) (6) Cause of death was undetermined other than severe gastroenteritis confirmed on exploratory surgery. Shortly after a recall on Gravy Train happened but we just found out. When comparing the lot number of the only can I had left over it was included in the lots recalled do to the presence of euthanasia solution.	1	Years	Great Pyrenees	Dog	104	Pound
<a href="#">EON-348899</a>	3/6/2018 18:00	Purina Cat Chow Naturals	I p0ured my cat's food into his bowl this afternoon and saw a glint in the sunlight. When I picked up the pellet, which had split in half, I found what appears to be a small piece of glass embedded in it. I put it in a Ziploc baggie and will keep it just in case. I purchased this food about a week ago. It is a new type I haven't purchased before.						
<a href="#">EON-348879</a>	3/6/2018 14:40	Fruitables Grilled Bison Jerky Treat	I bought a pack of Fruitables Pet Food grilled bison jerky treats and have in two separate instances given my dog as single treats in the space of 3 months. First time my dog had diarrhoea within a few hours so I thought that was an isolated instance. I gave my dog the same treat for a second time this month and he had diarrhoea again in the space of a few hours. Each time after I gave him a fruitable grilled bison jerky treat. He has not had diarrhoea apart from these two instances. Both times he was sick. He's not had diarrhoea again since.			Bulldog	Dog		

<a href="#">EON-348878</a>	3/6/2018 12:56	Purina Beneful original beef flavor	Stopped to get dog food on my way home from work on March 4 2018 at food Lion (b) (6). They were out of my normal dog food so I grabbed a bag of beneful original. Got home that night and gave both dogs food. Over night my 2 yr old Sheppard blue heeler mix started throwing up. That morning my 11 yr old boxer pit mix started throwing up pools of blood. At first I thought they gotten into something in the yard but there is absolutely nothing for them to get into to make them sick. My 11yr old kept getting worse. By 12 my dog couldn't stand and was passing out as she was throwing up. I rushed her to the vet. After 2 hrs they had no idea what was wrong and told me it might be time to put her down. I took her home that night with the meds. Eventually she started to feel better. After talking to the doctor about both dogs being sick and the reviews I seen online with dogs having the same system as mine we come to the conclusion that the dog food is the only thing both dogs had that could do this. It was and is the only thing that changed in the last 48 hrs. I put that bag of dog food up and went and got their normal dog food and some symptoms are still showing in my 11 yr old dog. But for most part they are both doing better. But had I not gotten my dog to the vet an meds I would be telling you about a dead dog vrs my dog who still has symptoms but is doing better	11	Hours	Pit Bull	Dog	56	Pound

<a href="#">EON-348840</a>	3/5/2018 15:51	Gravy Train Ol' Roy	I have been feeding my pet Gravy Train for several years. I left my job to take care of my mother, and I didn't have the money to feel my pet a more expensive brand. She became ill in January, and I took her to the emergency veterinarian. It was too late. She had inoperable kidney stones. I was heart broken. Not only was she a very dear friend, she also helped me in managing my chronic illnesses; she seemed to be empathic and knew when I needed some extra attention to handle my pain or distress. She had been in good health. I had been ill, and my part time job laid us off over Christmas, so I had been waiting until I caught up a little before taking her. She was ill in the night on the (b) (6), so I took her, but it was too late. I am devastated as she had never shown any signs of urinary problems before. I read online about the dog food contamination and was horrified to read that I had been feeding her this dog food. Devastated does not describe how terribly I feel. I cry every day because she was my faithful and well loved friend. And then I blame myself for being sick - and poor - and not feeling like making her dog food like I had done in the past. I wrote to the company, and they were sorry, but it was not their fault. I think it is their fault when they put a euthanasia drug into a dog food intended for living pets - loved ones.	10	Years	Dachshund - Miniature	Dog	11	Pound

<a href="#">EON-348832</a>	3/5/2018 15:49	<p>Permatrin Ultra Limited Sweet Potato &amp; Chicken Formula</p> <p>**and** (mixed at home with)</p> <p>Permatrin Grain Free Chicken &amp; Potato Formula</p>	<p>After switching all our pets on (b) (6) (5 cats and 2 dogs) to a new brand of high protein/grain-free pet food, Permatrin, two weeks later, (b) (6) (female cat, indoors only, 4 yrs) suddenly started having incontinence problems (b) (6). Within 24 hours of the onset of incontinence, she began vomiting and acting listless. On the morning of (b) (6) we found her laying in urine on cold tile in and immediately rushed her to the vet (b) (6) who determined that her kidneys were shutting down and her condition was dire. She died about 5 hours later despite intensive ICU treatment with fluids, heating pad, and oxygen.</p> <p>On the same new food start date (Jan 14), we also switched to Permatrin high protein/grain free dog food for one of our two dogs. The other dog remained on alternative dog food until it ran out, about February 6th. By Feb. 7th, both dogs were eating the Permatrin. By Feb 14th, the second dog, (b) (6) (35 lbs, female, 9 yrs) began occasionally vomiting, acting listless, and having diarrhea. We immediately took her off Permatrin and put her onto a different brand (Blue, and when the vet opened we took her in took her in. After stopping the Permatrin her vomiting stopped and she was better after a few days.</p> <p>(b) (6) the cat was a young &amp; healthy indoor cat who had never been outside (b) (6) is an indoor dog who is restricted to only the fenced-in back yard for bathroom trips. We checked everywhere in the house and yard and determined that there were no poisons or other foods that animals could have gotten into. The only common denominator was the switch to the high protein/grain free Performin cat and dog foods. When my dog got sick on Feb 14, that is when I was absolutely positive that the new food was the culprit for both sick pets. Luckily for (b) (6) we instantly stopped the dogs from eating Permatrin the minute she got sick, unlike poor (b) (6), who continued to eat the Permatrin for a couple days.</p> <p>I believe that possibly a protein ingredient may have been a component in both the cat food and the dog food. We lost a cat in (b) (6) to the massive Nutro catfood recall- that cat had the exact same symptoms that (b) (6) had.</p> <p>I do still have a ziplock bag of the cat foods, but unfortunately I was out of town when our dog got sick, and my family did not save the bag of dogfood that was eaten.</p>	4	Years	Mixed (Cat)	Cat	10	Pound
<a href="#">EON-348830</a>	3/5/2018 15:49	IAMS Proactive Health Smart Puppy Food	<p>On Friday, (b) (6) we opened a new bag of IAMS Puppy Food. The puppies were fed twice Friday from this bag, and had breakfast Saturday morning, (b) (6) from this bag. By Saturday afternoon, all 6 were down, one had died. They were rushed to an emergency vet clinic once discovered Saturday afternoon, only two survived of 6. I had the food checked by a lab, and the results from three random samples, one showed 9000 grams of mold in one, a lethal amount as I understand it from my vet.. The bag has the numbers US30941 on it, and a Best By date of 1/13/2019. I have the lab reports and the vet reports. These puppies were in excellent health, were parasite free, and had their first shot.</p>	63	Days	Poodle - Miniature	Dog	4	Pound

<a href="#">EON-348829</a>	3/5/2018 15:49	Dogswell Happy Hips	<p>Owners account: (b) (6) was given 1 of the Happy Hips treats, after which he acted "abnormally" but had no serious side effects. Owner waited about 4 days, then gave (b) (6) 2 of the same treats. The pet's stomach became stiff and he vomited once. After this he remained shaking, nervous, and twitchy. Coordination seemed overall poor and pet was head-bobbing. Pet gradually became more responsive. No farther food, treats or medication was given and no dietary changes occurred prior to event</p> <p>Pet was brought into UrgiPet on the same day shortly after episode. (b) (6) " was observed as being very sensitive to the touch, demonstrating mild toe-touching on the front limbs, and dripping urine - Owner reports this has never happened before. Bloodwork was drawn and sent out to IDEXX laboratories showing mild elevations in cholesterol and lipase, otherwise unremarkable.</p>	7	Years	Mixed (Dog)	Dog	15.4	Pound
<a href="#">EON-348828</a>	3/5/2018 15:48	Evangers Duck and Sweet Potato Dinner	<p>Dog was given Evangers Duck &amp; Sweet Potato dinner from a can for the first time last night at 5 pm. When we woke up at 6 am, he was lethargic, with head and tail low, walking unsteady and very slowly. He kept stopping &amp; just staring ahead. After slowly walking outside, he was wobbling slightly &amp; wouldn't walk back inside. When he was laid in his bed, he just stared at the wall &amp; didn't move much for an hour. It was as though he had been heavily sedated.</p> <p>2 hours later, we was walking around normally again. I brought him to the vet at 10 am &amp; he was OK by then. He has never acted like this before. I called the pet food store to report the issue &amp; possible link to the food we gave him.</p>	13	Years	Spaniel (unspecified)	Dog	15	Pound
<a href="#">EON-348826</a>	3/5/2018 15:45	Gravy Train canned food with beef	<p>In December, I went out of state for work. I had been feeding (b) (6) Kroger Brand canned food, but when I left my husband bought her Gravy Train canned food. He said she did not want to eat it, which is highly unusual. She did begrudgingly eat a two cans total and that night and following day, she vomited numerous times. My husband even left work early so that he could go home to check on her. The cans were purchased from Kroger in (b) (6) He did not feed her any more of that food subsequently, and she recovered.</p>	10	Years	American Pit Bull Terrier	Dog	25	Pound

<a href="#">EON-348822</a>	3/5/2018 15:44	Blue Dental Bones (All Natural Oral Health Care)	At (b) (6) annual check up a few weeks ago, our vet recommended giving her dental bones on a regular basis to help with her oral hygiene. We purchased the All Natural dental bones by Blue Buffalo and began offering them to (b) (6) once every few days. After consuming three bones over a one-week period (the package indicates they may be given daily), (b) (6) had an accident in the house overnight on 3/1 which is extremely unusual but we initially thought it was just a one-off and perhaps we hadn't let her out late enough in the evening for the final time though her stool was softer than usual. I gave (b) (6) another dental bone the next morning (3/2) and she again had an accident in the house overnight that same day. Her stool was even softer than before and more scattered, clearly indicating she was sick. We immediately became suspicious of the dental treats as that is the only aspect of (b) (6) diet that was different leading up to accidents and abnormal stool. We stopped giving (b) (6) the dental bones and she has improved.	6	Years	Mixed (Dog)	Dog	55	Pound
<a href="#">EON-348821</a>	3/5/2018 15:44	Beef Chunks in Gravy, Chicken Chunks in Gravy, Turkey chunks in gravy, beef and bacon dog food	(b) (6) started to sleep a lot. His balance was off. He began having difficulty sitting/laying down and standing up. Got to the point that we'd have to help him to stand. He would stumble during bathroom walks. It was a very sudden decline. I do not have the exact date of when the problem started, but it was after we purchased the Gravy Train wet food. If needed the store we purchased it at would probably have the date as we continue to get the withdrawal notice on our receipts.	14	Years	Shepherd Dog - Australian	Dog	30	Pound

<a href="#">EON-348631</a>	3/2/2018 17:36	Various Pet Jerky Treats manufactured in China	<p>Concerning Pet Jerky treats, China: it is...MUSHROOM Poisoning (sharply increased Creatine levels; google it).</p> <p>Mushroom poisoning symptoms: gastrointestinal problems, vomiting, convulsions, death. The poor pooches may have had hallucinations (if the duck ate a magic mushroom).</p> <p>Beijing knew it, too:</p> <p>Small farmers in China likely supply the ducks used in the jerky treat business (it's a Commie thing). Small farmers have to be kept busy, thinketh Beijing.</p> <p>However, it's also likely that Gulag labor provided the ducks used in the jerky treats.</p> <p>Ducks love eating mushrooms.</p> <p>Not all mushrooms are toxic (causing illness) or toxic (causing death) to the duck.</p> <p>However, the mushroom TOXINS accumulate in the duck meat.</p> <p>When said duck meat is consumed by humans (as in Peking Duck or Crispy Duck dishes found in tasty Chinese restaurants), or the duck meat is consumed by the dogs, both mammals get sick.</p> <p>Dogs, being smaller, have more acute symptoms of mushroom poisoning, resulting in kidney failure, or death.</p> <p>Check the: DUCK suppliers and then check the weather patterns and see where there was a pattern of: rain + the sale of the duck TO the factory.</p>						
----------------------------	----------------	--	---	--	--	--	--	--	--

			<p>Then check manufacturer's information about date of manufacture. Follow with the date of import into our country, then the sale of the product from the store which sold it. If possible, track the purchaser and match with any records of canine death/illness.</p> <p>Since many people use credit cards, it may be possible to provide a direct link back to the duck farmer FROM the American who purchased the product.</p> <p>Technique gives a clue as to the origin of the duck meat which is actually responsible for the mushroom poisoning.</p> <p>Because duck is a very popular dish in China, Beijing officials knew, immediately, what was the matter: ducks love mushrooms and people love ducks.</p> <p>Beijing knew--being duck dish lovers themselves, particularly considering that Beijing was formerly known as "Peking", as in the dish, "Peking Duck".</p>

<a href="#">EON-348538</a>	3/1/2018 15:52	Purina Pro Plan Savor Adult 7+ Shredded Blend	<p>The morning I first realized dog had a problem was (b) (6) He ate his morning meal significantly slower than he ever has. Approx. 1/2 hr. later, dog had projectile vomiting. Vomit was brown liquid and much undigested food. Then morning stool (small) was a mixture of blood and diarrhea. Soon after, vomited light brownish liquid (see photo attached which I later showed to vet). I called vet, and it was decided that since symptoms were similar (severe stomach upset) to my dog (b) (6) whom I took to see the vet for these symptoms the previous day, we would give this dog, (b) (6) the same medicine as (b) (6) Metronidazole.</p> <p>While I will give a firm date below as to "Date problem started," in hindsight, it now occurs to me that dog "may" have been showing minor signs progressing to illness prior month when he vomited, which is the first time for this dog since I got him 4 years ago. After an immediate visit to the vet, a negative stool sample, and an x-ray of the stomach with no discernible problems, the vet filled a prescription and sent us on our way. I "assumed" the problem resolved with the prescription. But now, with my 1st dog having died last month and (b) (6) and (b) (6) having gotten very sick as well, I have no idea if (b) (6) is even stable since we haven't determined where all the sickness is coming from and are now guessing at how to treat.</p>	8	Years	Spaniel - Springer Welsh	Dog	134	Pound
<a href="#">EON-348537</a>	3/1/2018 15:52	Purina Pro Plan Savor Adult 7+ Shredded Blend	<p>Dog had diarrhea throughout the previous night. Dog refused morning meal. Then morning stool had much blood and material in it. Also vomited light brownish liquid. I will attach photos (which I later showed to vet at visit). I immediately took dog to vet that morning. They ran an extensive blood test as well as noted blood in stool. Vet placed dog on Metronidazole to calm stomach upset. Next morning blood test results came back. Blood work was good, i.e., nothing out of the ordinary.</p> <p>While I will give a firm date below as to "Date problem started," in hindsight, it now occurs to me that dog "may" have been showing minor signs progressing to illness in prior weeks (approx. 12/24/2017) when he did not eat a meal.</p> <p>Also, I do not currently know if the dog is stable. He has been taken off this dog food, placed on a prescription dog food, and is still taking Metronidazole to calm stomach upset. I HOPE he is stable.</p>	12	Years	Spaniel - Cocker American	Dog	31	Pound
<a href="#">EON-348536</a>	3/1/2018 15:36	Purina Pro Plan Savor Adult 7+ Shredded Blend	<p>Dog gradually stopped eating regularly; on night before I took her to vet, she vomited, with eventual critical organ shutdown, requiring euthanasia. Veterinarian was unable to proactively determine and/or treat cause of shutdown because gall bladder, pancreas, kidney and liver levels became unstable at once, making surgery or other type of internal exploration dangerous. There were several blood tests and an ultrasound run, but no diagnosis could be rendered or suggested from these tests.</p> <p>While I will give a firm date below as to "Date problem started," in hindsight it now occurs to me that dog "may" have been showing minor signs progressing to illness in prior week as she would refuse food, but then eat some if I fed it to her by hand. (I assumed she was being finicky as she was getting older and that there was no reason to be especially concerned.)</p>	11	Years	Spaniel - Cocker American	Dog	28	Pound

<a href="#">EON-348535</a>	3/1/2018 15:16	Fancy Feast Poultry and Beef classic pate collection carton of 24 cans	I called to tell the owner the test was negative, and she proceeds to tell me that she had given her extra canned cat food to a relative who had fed the cat food to his cat and that night his cat attacked him while he was in bed and bit him multiple times through the covers. <a href="#">EON-348504</a>	3/1/2018 3:48	Taste of the wild Pacific stream puppy	Been feeding taste of the wild Pacific stream puppy for 2 years all of a sudden dogs have been vomiting here and there. Then some will have bloody mucus stools. Vomiting. Lossing weight, lethargic, drinking alot of water. Loss of milk on the mother's, swollen slavery gland on another female that's infected now and may need to me removed, multiple fecal exams negative on parasites, worms, coccidia, parvo, gardia. Seems like it could only be the food. All my dogs are separated and do not even go outside.	3	Months	Bulldog - French	Dog	25	Pound
<a href="#">EON-348501</a>	3/1/2018 0:24	Merrick Purrfect Bistro Grain Free Chicken Pate	New shipment of Merrick Purrfect Bistro arrived via FedEx, distributor is Chewy. Some of the cans are crushed, and were obviously packed that way. I did not use any of the damaged cans, however, the consistency, the look, and the smell of the food was drastically different than normal. Ordinarily, the food doesn't stick like paste to the top of the can and is easily rinsed for recycling. This batch does. The consistency is thinner, more paste-like, and smells more unpleasant than usual. Within two hours of feeding this new shipment to my 6 month old intact male kitten, and 16 year old neutered male, both normally in excellent health and only indoors, the two cats had explosive, smelly, and painful diarrhea. Not realizing yet that it was the food, I emptied and sanitized the litter boxes, the home itself, and even checked their bowls for cracks. There is nothing in my home that the cats can get into that can make them ill. It's been over a week now and my kitten is starting to growl when he cleans his behind and cries after he has diarrhea. He's going to the vet tomorrow. I am certain it is the food, as the cats haven't been exposed to any other animals. This needs to be looked into.	6	Months	Mixed (Cat)	Cat	6	Pound
<a href="#">EON-348499</a>	2/28/2018 23:28	Darwin's Natural Pet Products ZooLogics All-Natural & Grain-Free Beef Meals for Dogs	My Dutch Shepherd has been consuming Darwin's Natural Pet Food for maybe a year or less. On around 2-25-18, she had recently consumed a new batch of the raw beef patties and developed signs/symptoms of salmonella infection (vomiting, diarrhea, lethargy, lack of appetite, passing blood). I took her to vet ER on 2-27-18 where she was ultimately prescribed metronidazole for a suspected bacterial pathogen from Darwin's raw meat product. I sent this vet ER report to the company and informed upper manager (b) (6), about the concern. I offered to ship the rest of the meat to a lab of their choice for salmonella/listeria testing but she declined. Also, I asked for a refund for the latest food shipment in light of my vet ER bill and the safety concern that the other patties could also be contaminated. (b) (6) declined to issue a full refund and would only issue a refund for the beef patties (that refund has not yet shown up on my credit card). Anyway, I still have the frozen patties in my freezer and would gladly send them off for further lab testing. I have cancelled all future Darwin's orders as well. I know the meat was infected with a bacterial pathogen that made my dog ill. Please investigate!	7	Years	Other Canine/dog	Dog	58	Pound

<a href="#">EON-348485</a>	2/28/2018 21:12	Purina beyond grain free white meat chicken ans egg recipe	When switched to this food (purina beyond white meat chicken and egg recipe) my cat was very hesitant to even look at it. After a couple days he started eating it and after every time he ate would vomit it back up everywhere. He started consuming a whole bowl of water per day and started loosing weight rapidly. After a quixk web search many other people have problem with purina poisoning their animals. I ran and purchased a box of fancyfeast wet food and sherbert the cat is doing excelent again after a week long recovery. Regaining his lost weight, consuming normal water for a cat and is not acting strange or vomiting.	10	Years	Mixed (Cat)	Cat	8.1	Pound
<a href="#">EON-348482</a>	2/28/2018 20:16	Beefeaters Oven-Backed Chicken Jerky Curls	I purchased Beefeaters chicken jerky curls at Menards in (b) (6). This past Friday my dog was given the treat. By Sunday night his abdomen had swollen to the point where he was round and his skin was very tight. His breathing was shallow and he was in distress. I called an emergency vet. The vet took an xray which showed that my dogs entire stomach was full of food he had eaten afterwards. His bowels stopped working and he had to be hospitalized the first three days.	10	Years	Terrier - Boston	Dog	16.6	Pound

Ultrasound images of the bladder show an elliptic to round anechoic structure with a normal appearing wall mucosal pattern. There is acoustic enhancement underneath the bladder. No masses are seen. There is no evidence for intraluminal debris or calculi. The kidneys measure 3.43 cm (left) and 3.61 cm (right) in length. The kidneys are well rounded and smooth, without obvious capsular abnormalities. Cortical diameter is appropriate. There cortices are hyperechoic and there is mild to moderate loss of corticomedullary distinction. There is slight renal pelvic dilation (1-2 mm) likely as the results of fluid diuresis. There is no evidence of hydronephrosis or renal calculi. The left adrenal gland measures 0.35 cm and the right adrenal gland measures 0.315 cm in diameter. Both adrenal glands have normal shapes and size. The cortex and medulla appear normal, no focal lesions seen. The spleen has a homogeneous uniform echogenicity with a fine parenchymal texture. The parenchyma is normoechogenic. There are normal, tapering splenic veins at the hilus. no evidence for hemostasis. No evidence for focal lesions. The capsule appears

--	--	--	--	--	--

			<p>smooth and thin. Subjectively, the overall size appears normal.</p> <p>The gastric wall does not show abnormalities. No obvious foreign bodies, masses, or obstruction patterns noted. The intestinal loops show a normal wall thickness and diameter. The typical wall layering pattern is well preserved. No abnormalities found.</p> <p>The pancreas appears unremarkable on both sides. The mesentery has a normal echogenicity, and no free fluid was noted. All intraabdominal lymphnodes are of normal size, texture, and appearance.</p> <p>The liver has a relatively homogenous echotexture and appears normoechoic. It has sharp smooth margins but subjectively, appears decreased in size. No evidence for focal lesions. There are normal, tapering portal veins having an apparent echogenic wall. Normal hepatic veins without apparent walls are visible. The gallbladder appears anechoic and has a thin wall. It contains a large amount of echogenic debris. Cystic and extrahepatic bile duct are normal. There is no evidence of cholestasis or hemostasis. The portal vein: vena cava ratio is 1, which is not suggestive of an extrahepatic portosystemic shunt.</p> <p style="text-align: center;">Assessment:</p> <p>The kidneys are normal in size and shape but there is an increased echogenicity in the cortices and mild to moderate loss of corticomedullary distinction, which can be non-specific indicators of inflammation or fibrosis.</p> <p>Subjectively, the liver appears somewhat small, but I do not see overt evidence for a portosystemic shunt.</p> <p>The gallbladder contains a large volume of echogenic debris, but this does not appear to be causing obstruction.</p>

<a href="#">EON-348276</a>	2/25/2018 11:08	Old Roy	<p>Hello,</p> <p>I am writing in response to the story below, which I just saw yesterday.</p> <p>I had to put my Chow-Chow to sleep on (b) (6). Four days earlier, I decided that she might want canned food. My Brother brought home Old Roy. She ate it happily for 3 days. On the 4th day, I woke at 4 am., she was on the floor eyes opened, and couldn't even raise her head. She was very sick. She couldn't get up and acted confused or blank. At 9 am I went to the vet, to explain situation. When I came back she had made it to the living room, walked into a wall, I backed her up and she fell on me. She then had diarrhea where she lay. At this point I knew all was lost. After cleaning her up, painfully decided she wasn't there anymore. While we were looking for an action, she messed herself again. I had to take her to be put to sleep. The vet said testing would be very expensive and she wouldn't come out of it anyway. I knew it was the food, if she would have not had it, she would still be here. So I just wanted to let you know of another animal loss.</p> <p><a href="http://wjla.com/features/7-on-your-side/fda-to-investigate-after-abc7-exposes-euthanasia-drug-in-dog-food">http://wjla.com/features/7-on-your-side/fda-to-investigate-after-abc7-exposes-euthanasia-drug-in-dog-food</a></p> <p>(b) (6)</p> <p>Article said contact FDA, I did, they responded to contact you.</p>	14	Days	Chow Chow	Dog	50	Pound

<a href="#">EON-348173</a>	2/23/2018 15:04	Canine mix	I bought a bag of Canine mix made by Blackwood and it contains about 50% cat food. When I contacted the company, I was told they were allowed to put it in the dog food when they have excess cat food. It doesn't say on the package that it contains cat food. I also have read that cat food can cause health issues. I think this needs to stop they are going to make dogs sick.						
<a href="#">EON-348172</a>	2/23/2018 14:56	IAMS proactive Health Sensitive Skin and Stomach Grain Free Dog Food	Our dog is severely allergic to fish oil. I almost bought a bag of IAMS Proactive Health Sensitive Skin and Stomach Grain Free dog food. Had I fed this to our dog it may have been life-threatening. On the front of the packaging it shows chicken and vegetables in the imagery and also says "With real chicken and peas". There is NO mention of fish being used in the product.  Usually, I don't find it necessary to read the ingredients. Since the store was out of our regular product, I had to try something else. On a whim I decided to check the ingredients, not for fish, but just for what was being used. To my surprise, fish meal was one of the ingredients listed on the side panel. I am lucky I did. Had I not read the ingredients listed very small on the side panel, I would have probably killed our dog feeding it this product.  I feel that IAMS, as a responsible business should label when there is fish in a product on the front of the packaging for pet owners with pets who have food allergies. This is a very dangerous scenario. Had this product killed our pet, I would have been highly upset and sought major legal ramifications.						
<a href="#">EON-348168</a>	2/23/2018 12:28	Canine Carry Outs Chew Lotta Small/Medium	We gave our dog three Chew Lotta small/medium treats by canine carry outs over a four day period. His stool became watery and he became incontinent. There was a significant change in disposition with extreme lethargic behavior. Traditionally, he eats grain free food by Performatrin or Nulo with healthy stools and high level activity. There was also mucous in the stool, but no blood.	1	Years	Sheepdog - Old English	Dog	105	Pound
<a href="#">EON-348167</a>	2/23/2018 11:52	Merrick Backcountry Great Plains Real Steak Patties	Purchased two (2) bags of Merrick Backcountry dog treats on Saturday, 2/17/2018. <a href="#">EON-348121</a>	2/22/2018 17:00	Whimzees brusheez	Whimzee bone was given to (b) (6) on January 3, 2018 at approximately 2 pm. During the morning of January 4, 2018 he bagan to vomit at approximately 2am. The vomit contained large amounts of bone matter. No food was present in vomit. The dog continued to vomit 12 times in the next 4-5 hours. The vomit began to contain blood and he was rushed to the emergency animal clinic for evaluation and treatment. The dog was given iv fluids, medicated for symptoms and was instructed to remain npo for hours with slow introduction of fluids. The dog continued to vomit with introduction of food/fluids in extremely small amount. He returned to the emergency vet clinical for additional treatment. Lab work and X-rays revealed presumed blockage and surgery was recommended. No foreign body was found however his stomach and intestines showed remarkable swelling and biopsies were performed. His pancreas was unremarkable. All Tests came back clear for underlying preexisting conditions and it was determined to be an acute event. Hospitalization was required due to his condition of dehydration and inability to eat. I informed the company of the concern and reaction. I noted the bone my dog consumed contained paprika which is known to cause gi complications in dogs. The company refuses to take any responsibility and stands by the safety of the product.	8	Years	Pointing Dog - German Short-haired	Dog	74	Pound

<a href="#">EON-348118</a>	2/22/2018 16:04	Royal Canin Gastrointestinal Low Fat Veterinary Diet	<p>Until earlier this week, we had been feeding my dog this particular brand and variety of food for the past 11 months. On February 8, 2018, I purchased a new bag of this food. I gave her some food from this new bag and some food from an old bag. The next day, my dog did not seem to be feeling well, and so I took her to see our regular veterinarian. She did some bloodwork, and nothing particularly remarkable showed up. I continued giving her some food from this new bag and some food from an old bag. My dog started vomiting Saturday afternoon, and I withheld all food as a result. Late on Sunday, she started shaking violently and seemed like she was in severe pain, so I took her to a local emergency clinic. They repeated the bloodwork and told me that her ALT (a liver enzyme) level had risen to 3178 IU/L. This number had been 56 IU/L when the bloodwork was done Friday. Given the severity of her condition, my husband and I decided to have my dog hospitalized so that she could receive fluids and medications intravenously. On Monday morning, we took her to see our regular veterinarian, and she continued giving my dog fluids and medications intravenously for the remainder of the day. After we took her home, we continued the medications, but we also went back to an old bag of food and continued that exclusively until it was used up. We finished the old bag of food on February 18, and I started giving her food from the bag in question on February 19. Late in the day on February 20, she started vomiting again. We went to the regular veterinarian to get fluids and discontinued use of the bag of food in question. I believe that she has now recovered completely. Finally, I believe that my dog knew there was something wrong with this particular bag of food because I had a great deal of difficulty convincing her to eat it.</p>	16	Years	Beagle	Dog	23	Pound
<a href="#">EON-348088</a>	2/22/2018 5:04	Gravy train	<p>(b) (6) was his normal self all day. Later in the afternoon he had trouble standing on his own and seemed to be very tired and just not his normal self. About ten pm we let him out to potty. A few minutes later we called for him and the others to come in. He didn't respond so we thought he was just wondering around like he always had and let him have a few extra minutes to himself. About five minutes later we call again he still didn't respond. That was not normal for him so we went outside and yelled for him and started looking in the yard. As we approached the drive way I saw something black laying in the middle. As I got close enough I knew it was him. He was laying on his side not breathing and had already started to become stiff. He had relieved himself and his eye was still open. He was not able to be saved. We do not know what happened or how he was just gone that fast. Im doing this report in hopes of getting a date this stuff could have been in his food when he passed. I pray it wasn't. It was his favorite food and to be honest I hated he loved it so much. He wouldn't touch any other food period. So he got his own bag of food while the the other babies got breed specific food.</p>	9	Years	Doberman Pinscher	Dog	100	Pound

<a href="#">EON-348068</a>	2/21/2018 20:44	Milo's Ktchen home-style Dog treats. Steak Grillers Recipe with Angus Steak	(b) (6) became very thirsty. Polydypsia and polyuria, along with restlessness caused me to take him to the vet. He was found to have hyperthyroidism. All other blood work was normal. No mass could be felt. Since I make all of his food except treats, I stopped giving him his Milo Grilled Beef treats. He was retested and and he remained hyperthyroid, but the level was somewhat lower. He was then referred to a specialist. His excessive drinking and urination slowly began to decrease and was entirely normal by the specialist appointment. I spent \$800 on thyroid tests. Ultrasound was inconclusive, however, his TSH returned today completely normal. The vet and the oncologist can only explain this by an exogenous thyroid source. His Milo treats are the only thing I can think. They suggested that the treats be tested.	12	Years	Terrier - West Highland White	Dog	24.6	Pound
<a href="#">EON-348062</a>	2/21/2018 17:44	Darwin's zoologics all natural and grain free	My dog has been eating darwins raw food for about 9 years or so and she became suddenly ill. She was lethargic, wouldn't move, would only lay on stomach. When she did finally get up I felt her tummy and sides very gently & she cried in pain. Took her to ER and they diagnosed her with liver cancer. We stopped feeding the darwins for about 5 days and fed chicken and rice until the other night when I decided to try one patty of darwins out on her again. It nearly killed her. She threw it all up and was lethargic again, this time shivering and not responsive. We almost put her down but she bounced back the next morning.	11	Years	Shepherd (unspecified)	Dog	64	Pound

<a href="#">EON-348046</a>	2/21/2018 12:20	Ol' Roy	My dog started puking and shaking, she stopped eating or drinking. She puked like 3 to 4 times a day. Going on day 5 of no eating. Still shaking every once in a while.	2	Years	American Pit Bull Terrier	Dog	60	Pound
<a href="#">EON-347983</a>	2/20/2018 23:12	Members Mark Exceed Dog Food	I purchased Members Mark Dog Food from Sams Club in (b) (6) about one month ago. After feeding my dog for about two weeks, my dog quit eating all together. She drank water excessively and started puking and dry heaving. She was a very healthy dog till then and seen vet for appropriate shots. I talked with a veterinarian and they told me it was either organ failures or blockage. She used the bathroom so the blockage was ruled out. She lived for about one more week before slipping into a major seizure and convulsed till I put her down. I read reports online under Dog Food Advisor with other pet owners having the same issue and symptoms. I have the remainder of the dog food and wondered if this could be tested. I am truly convinced that this food is poison because she was completely healthy till I fed her this dog food.						

<a href="#">EON-347973</a>	2/20/2018 21:20	Kibbles 'N Bits 12-Can Variety Pack – Bistro-Chefs choice	My son gave Both of my dogs Kibble and bits wet dog food (the recalled cans) (b) (6) and my other dog ate about between 7pm and 7:20 latest, finishing the food, about a couple of minutes later she started to bark at us in the living room , she walked away and the we heard several loud booms coming from upstairs, about 10 mins later we noticed (b) (6) come back in to the living room looking like she was going to throw up , she could not stand and was falling over , I assumed she was sick . I went up stairs to see what happened after and observed urine all over the bedroom carpet where (b) (6) was. I told my son try to get her outside because she has to go to the bathroom ,my son start screaming to us , she can walk she is falling all over and her eyes are moving back and forth , I immediately called (b) (6) Animal Emergency Hospital and I drove her their regarding this situation. The Dr. On scene diagnosed her with a seizure – A neurologic Episode with nystagmus in her eyes. Paid for A bill of \$167.00. The vet stated that the symptoms diminished as we were at the Vet , We came in the Animal Hospital with the symptoms at 08:00 pm while she was still having them and Left at 9:41pm with symptoms that seemed diminished at that time. The Next Day I took her to her Primary Vet – (b) (6) Animal Hospital of (b) (6) for all blood work and a check up regarding this Seizure. Total Bill \$327.00. They were unsure what caused, it. At that time the recall dog food was not publicly made aware of the recall.I have Animal Hospital Receipts for both dates and receipts for the Wet Dog food and Still have cans from the February 14,2018 pack.	11	Years	Pit Bull	Dog	60	Pound
<a href="#">EON-347972</a>	2/20/2018 20:44	Ol' Roy dog food	My grandmothers dog frequently eats Ol' Roy canned dog food. Last Monday he was laid to rest because we could not figure out what was wrong with him. We had done X-rays and blood work and poured thousands into finding an answer. Now a statement has been released and his symptoms align with ones listed. I want to make sure another dog owner does not go through what my family endured. We lost a beloved boxer that had years left at least. He was in great health and up until the weekend prior to putting him down he was rambunctious and fun like normal.	9	Years	Boxer (German Boxer)	Dog	100	Pound
<a href="#">EON-347968</a>	2/20/2018 19:04	Gravy Train Beef and Gravy and Gravy Train Turkey Strips	When the weather turn extremely cold I bought Gravy Train beef and Gravy Train Turkey canned foods. I gave him about 1/3 of a can daily during the cold spell. After a few days he started to get a little lazy. That was with the beef. I started giving him the turkey and he went down hill over night. When I tried to put him out in the morning he couldn't get his balance and fell twice before he could reach his pen. I thought he slipped on the ice so I left him out , but continued to watch him. He started to fall each time he tried to get up on all fours. His back seemed paralyzed. I brought him in but he could not stand on his own. I took him to the vets immediately and I thought he had had a stroke. the decision was made to put him down.	12	Years	Catahoula Leopard Dog	Dog	82	Pound

<a href="#">EON-347933</a>	2/19/2018 20:24	Milk Bone Brushing Chews Daily Dental Treats "As Effective As Brushing"	The dog was given a Milk Bone Dog Brushing Chew about 7 a.m. A few hours later he had bloody diarrhea throughout the house. By evening, he was still defecating a stream of blood, but no solid matter. I did not know the cause of the problem, and three days later, he was given another of the same chew. The same bloody diarrhea occurred. It was the only new product introduced to his diet, so I went online to see if there were other incidents of bloody diarrhea after eating the Milk Bone Dog Brushing Chew. There are hundreds of the same complaint on Amazon reviews, and there is even a Facebook page warning people not to feed their dogs this product. Please pull the produce from the market! This product is killing pets! Please, please pull this product from shelves.	9	Years	Schnauzer (unspecified)	Dog	45	Pound

<a href="#">EON-347931</a>	2/19/2018 19:56	Meow Mix I think it's Indoor. It's tied up in 2 bags and I don't want to open it	I bought 2 bags of Meow Mix. Opened 1 and used it, no problem. A few weeks later, opened the other and freaked out, no idea what was going on, so I put what I just poured in the bowl in a zip lock baggie, put a "furry mess" that fell on the floor in another zip lock baggie, then put both baggies and the new opened bag in a glad garbage bag and then into another glad garbage bag just to make sure of what LOL I don't know. I connected with the Company online and let them know. A day or so later I found a response in spam mail with a number to call. I called and told them what I thought was bugs may have been nesting somehow finding its way into their bagging system. She said nope, no way. I assured her these bags have been on a shelf with human dry foods and all was well until I opened the 2nd bag. Nothing from the 2nd bag had infiltrated my cookies and other food. I wanted to send it to them, she said nope, not gonna contaminate the world with whatever I think is wrong with this product. She wanted to send me coupons, I told her I wanted them to see this and figure it out, she said NOPE. So I responded to the email and this girl said NOPE, no product left their facility in this condition, also agreed not gonna contaminate the Postal System with what I think may be a problem, she will send me \$10 in 3-5 weeks LOL!! I asked for the name and address of someone at Smucker's who cares ... NO RESPONSE. So, when I just read about the pentobarbital (phenobarbital?) in Smucker dog food, I followed a link to this site to report any incident possibly related. Well, I believe bugs or nesting in a bag of Meow Mix made by Smucker is a problem they don't want to deal with, so I'm letting you know.

<a href="#">EON-347891</a>	2/19/2018 13:40	Harrison's High Potency Fine, Zupreem Natural with Added Vitamins Minerals Amino Acids Small Bird (budgie on front), Lafeber Company Nutri-Berries Conure Pet Food 12-ounce	<p>I received three parrot products from different manufacturers, but shipped and sold from Bird Dog Depot, a fictitious name registrant of Golden Cockatoo LLC, a registrant of Tri LLC in Broward County Florida, via Amazon. After receiving the first most recent bag of food, Harrison's High Potency Fine, from Bird Dog Depot, I came down with a 101 fever and massive GI issues, including diarrhea and my dog became ill with vomit and diarrhea. I've lost 10 lbs in the last 28 days from the inability to keep food in and my dog has slowly recovered as well. During this time, my parrot became ill, with what seemed like psittacosis, however my vet tested him for psittacosis and pacheo's disease, only to return back with negative results. I ordered a second bag of food, during this time, prior to the test and the results, fearful the food was causing my bird's sickness, which included lethargy, sneezing, weight loss, protruding keel bone, one wet sneeze, wet noises in the crop, sour crop, and excessive diarrhea. I changed back to the new food after it arrived, Zupreem budgie size, again from Bird Dog Depot. He then became unable to walk, perch, or generally partake in life. I was feeding him every 30 minutes around the clock, pushing wet items to keep his system working. He would try to vomit and I would pull food from him for 45 minutes, weighing every hour on the hour. It was nearly impossible to keep his weight up. He already receives steam showers every day 2x, for at least 15-20min each, but now I was offering them for 2 hours at a time to keep him warm, as the shivering was excessive. Following the receipt of the second bag of food, within 3 days, my husband became viciously ill with a fever and sinus infection. During this time, my own GI was still wreaking havoc, with a flare up and I became ill with ANOTHER fever. Its important to note too, my husband and I had zero intimate contact and he was sleeping in a separate room during his sickness. Meanwhile, my parrot is still loosing weight excessively, lethargic, diarrhea, and inability to stand or perch. After seeing my vet, she suggested a holistic product to clear up and fungal or yeast infection, but she herself could not rule what was the causing agent of this. I went to my instagram, where I have a lovely bird community and offer support to owners while advocating for the proper care of conures and other parrots. After sharing my story, I found 21 other individuals also became ill, their family members became ill, and their parrots became ill and or died, following ordering from</p>	6	Years		Parrot	65	Gram

			<p>the same vendor. Also noting I believe this is related to Birds and Beaks Rescue in Michigan. After extensive research I believe Avian bornavirus is on the bags, containers, tubs, perches, and toys coming from Amazon Services INC and Bird Dog Depot in Broward County, FL. Avian Bornavirus is widely understudied and we are unaware of it's ability to be zoonotic as an infectious disease. However I have now found scientific journaled articles related to humans being infected with avian bornavirus and suffering from auto immune disease. In one case an entire family was diagnosed with Avian Bornavirus and as a result, Chronic Fatigue Syndrome. Avian Bornavirus attacks the central nervous system, where it then seeks the weakest link in our immune system to attack it's host's cells. I believe avian bornavirus is then taking control of what we as people have the most antibodies of - the flu shot. From there, the flu shot antibody codes are read by Avian Bornavirus (ABV) and ABV then tells the antibodies to start mutiny on the immune system of the host, controlling the antibodies so they do exactly the opposite of what they are supposed to do, providing immunity.</p> <p>As a result, after handling these products that have avian bornavirus ON them, and releasing the ABV agent into our home environment, we are inhaling and our pets and parrots are inhaling these microscopic particles, allowing the ABV to enter into our own systems. From there, the flu, since we have the most antibodies, takes over the human body and manifests there. Those who recover naturally or those who recover with tamiflu and other medication force the avian bornavirus back into hiding, in the same way a herpes virus goes dormant. Our medical professionals are not looking for avian bornavirus because it is so under studied, but genome 4 of the avian bornavirus is so widespread, it is world wide and affects all populations of birds and bird species. If this has not made the jump to infect mammals as a Bornaviridae, this would infect be Borna Virus Disease on the products, bags, toys, and food from distributors on amazon. How does the virus get on the product? The seller we all have in common, is house parrots potentially both illegally smuggled and infected, in the store front of Teri LLC, the Golden Cockatoo and parrots are allowed to coexist and even sit on the items in the store. The means any microscopic dried fecal matter, vomit and regurgitation from parrots in the store is attaching to the bags. I've also gone so far as to research parrot</p>						
--	--	--	--	--	--	--	--	--	--

			<p>keratin casing and believe avian bornavirus is spreading via the feather dander on maturing blood feathers. Keratin is both a protein that could carry the RNA protein the virus resides in and the certain from the blood feathers when it flakes as birds naturally preen, could also carry trace amounts of the parrot's blood, again containing the RNA protein. In concentrated quantities, when inhaled from a host, this can cause sudden acute death in some parrots with weaker immune systems or stressed immune systems such a locations like over populated breeding facilities, pet stores, and rescues (ahem birds &amp; beaks acute death of 11 parrots). Since ABV is a disease that affects the central nervous system of it's host, it matters not the metabolic function of a parrots system, and instead takes up residence in the most stressed location of the immune system. Another rescue, one in South FL, who works in conjunction with Golden Cockatoo, picked up a bird who was IN Golden Cockatoo, and is suffering from 'psittacosis and arthritis'. Since we know ABV mimics other diseases to hide itself, I believe this bird to be infected with manifested psittacosis and rheumatoid arthritis, as a result of the avian bornavirus infection. The care taker of the bird even says on the go fund me page the birds system has completely rejected all treatments thus far to the psittacosis medication. Meaning instead of fighting psittacosis, the are giving more antibodies to the presumed psittacosis infection, actually feeding the avian bornavirus itself, thus speeding the disease through the central nervous system, allowing no recover with medications for psittacosis, as it is NOT psittacosis. We also know ABV to cause auto immune disease in birds, which I believe manifested in my own parrot as PDD, Proventricular Dilation Disease, contributing to the gross amount of symptoms he suffered from over the last 28 days. I also believe ABV is manifesting in the parrot mentioned from the rescue, of the bird who is fighting 'psittacosis', as rheumatoid arthritis. What do we know about PDD and Rheumatoid? That both are auto immune diseases. I also have confirmed reports from multiple parrot owners who bought from Bird Dog Depot who are now diagnosed with auto immune diseases post orders from this company, proving I believe Avian Bornavirus, Genome 4 is both zoonotic, being transferred on the products from Bird Dog Depot and is killing our parrots, who are then in turn killing us. This could lead to mass extinctions of both wild and captive bird alike. Seller is also international, so this is also reported to me in the UK and Canada and potentially also Australia, all from contaminated bags of parrot food from many manufacturers, but one common distributor, in Bird Dog Depot, &gt; Golden Cockatoo, Tri LLC. Please help.</p>						
<a href="#">EON-347889</a>	2/19/2018 12:36	Ol' Roy Bacon Flavor Dry Dog Food 50 Lb	Pet Passed away after consuming dog food. Vomit was found next to pet.	7	Years	Retriever - Golden	Dog	60	Pound

<a href="#">EON-347888</a>	2/19/2018 12:36	Evanger's Organics Cooked Chicken Grain-Free Canned Dog Food 12.8-oz case of 12 Purchased: 9/23/17 10/9/17 and 10/30/17 from Chewy.com	<p>I had added Evangers to my pet's diet, as I was trying to provide a bit of variety for my dog. This is how it was advertised: Dog tested and approved, Evanger's Organics Cooked Chicken Canned Dog Food is the next best thing to a homemade meal for your four-legged companion. Made with premium-quality ingredients that are nutritious and delicious, each can of organic food is hand packed to ensure the utmost quality, and is free from additives or by-products. And with natural vitamins and minerals blended into the mix, you and your dog can look forward to a healthy, balanced diet that is perfect for all stages of life.</p> <p>I thought that meant the dog food was MORE than safe. He ate it and a few moments later started bumping into walls and walking around, clearly dizzy. I sat with him and noticed rapid eye movement from side to side, which I found out after taking him to the Vet is called Nystagmus. He became violently ill, throwing up in the car on the way to the Vet and afterwards. He suffered from the Nystagmus for almost 2 weeks and was not fully recovered from it for a month. He still appears unsteady at times when walking. He was in wonderful health prior to eating the food. It makes me sick to think I made my dog sick because I chose to give him this food, thinking it would be a healthy choice. I hope you recall every bit of it so this does not happen to any other dogs/dog owners.</p>	12	Years	Retriever - Labrador	Dog	70	Pound

<a href="#">EON-347867</a>	2/19/2018 8:28	Rachel Ray Nutrish Dish Chicken & Brown Rice Recipe	I purchased for the first time an 11 pound bag of Rachel Ray Nutrish Dish chicken and brown rice recipe dry dog food. I noted immediately a 4 inch by several inches hard piece that looked to me like dried dog poop in the bag. Nutrish is not responsive to inquiries because I wanted to know what this was. So I posted on facebook and you get kind of an automatic response that someone would reach out to me. They did not. I had to call and call and then someone named (b) (6) was supposed to send me a retrieval kit. He did not until I resposted on facebook that no one contacted or sent me anything. Another lady posted that she had bugs in the same food. Another lady posted pictures of cockroaches in the same food and another lady posted a picture of a plastic piece baked right into the larger piece of kibble in this same product. I have pictures of mine and the plastic piece or you can see them on Nutrish facebook page under visitor comments. This product should be pulled. They still have not gotten back to me what was in my food and the plastic piece could have hurt the other ladies dog. I threw out the whole bag of my Nutrish but still awaiting as to what it was in that bag as I finally received the retrieval kit and sent it back immediately.						

<a href="#">EON-347857</a>	2/18/2018 20:32	<p>Purina Pro Plan Chicken and Rice Dry Food for adult cats  Purina One Chicken and Rice Dry Food for adult cats  Fancy Feast Classic Chicken canned food for adult cats</p>	<p style="text-align: center;">Contents of letter I sent to Purina Customer Affairs:</p> <p>I am a biomedical scientist with several decades' experience in drug discovery research, including proteins involved in the development of nutrient-absorbing cells in the intestine. In 2009, I shifted from using Hills Science Diet to Purina products (Purina Pro Plan and Purina One dry chicken and rice formula, supplemented by Fancy Feast classic poultry canned food), due to one of my cats experiencing urinary tract blockage by oxalate crystals. Reading and consulting with feline urinary disease researchers at the (b) (6) of Veterinary Medicine indicated that feline diets with higher carbohydrate content are associated with oxalate crystal formation. Thus, I switched my cats to Purina dry foods with ~40% or more protein content to reduce their carbohydrate load.</p> <p>My experience with Purina cat food. My cats, one after the other, have died of digestive inflammatory disease and intestinal cancer since their change to a Purina diet in 2009. (b) (6) died in early (b) (6) of intestinal cancer at the age of 14. (b) (6) died in (b) (6) at age 15 of liver failure after having pancreatitis and inflammatory bowel disease (triaditis syndrome). (b) (6) died in (b) (6) of intestinal cancer at the age of 14. (b) (6) died of non-small cell intestinal lymphoma last month at the age of 14. These cats were genetically unrelated, domestic cats (not purebreds), and all were FeLV/FIV negative. Detailed diagnoses are available for (b) (6) and (b) (6) based on bloodwork, ultrasound, and histopathology of transmural biopsies. (b) (6) and (b) (6) were diagnosed based on bloodwork and palpable abdominal masses. I was disheartened to learn from a physiology colleague that her two twelve-year old cats died of intestinal cancer within months of each other last summer, and they were also fed a Purina-only diet. She made the same inference I have: that a chronic dietary imbalance or antigenic ingredient in recent Purina food formulations is the most likely cause of the chronic gastrointestinal inflammation and cancer in our cats.</p> <p>My experience with previous cat food. Before switching from Science Diet to a Purina</p>	14	Years	Domestic (unspecified)	Cat	12	Pound
----------------------------	-----------------	--	--	----	-------	------------------------	-----	----	-------

			<p>diet, all my cats of known age died between 18 and 22 years of age – five years longer, on average, than my cats have lived since they received a Purina diet. My cats also previously died from a range of diseases (renal failure, hemolytic anemia, squamous cell carcinoma, and pulmonary cancer compounded by heartworm infection) rather than dying of digestive diseases. We live in a healthy household with average radon level, no cigarette or fireplace smoke, very little use of chemicals, and fresh air and water which the township tests and reports on annually.</p> <p>Significant digestive health improvement when my pets changed from Purina to other brands in 2017. Given the observation that Purina food use was associated with increased vomiting and incidence of inflammatory bowel disease, triaditis syndrome and cancer in my cats, I did a lot of reading on ingredients that can cause gastrointestinal inflammation (food additives such as vegetable gums and grain, which are not present in a cat’s natural diet and can also be contaminated with mycotoxins and agricultural chemicals). I identified three alternative brands of cat food with limited ingredients, little or no grain, no chemical additives beyond necessary amino acids, vitamins, and minerals, and single protein sources, such as chicken, which cats have evolved to eat. I also switched to a greater emphasis on canned food, with its more natural nutrient and moisture content. Since switching my cats’ diets away from Purina in mid-2017 to these other brands, my cats have rarely vomited. Surprisingly, vomiting also ceased in the two cats that had been diagnosed with intestinal cancer and were vomiting every day or two when they were given Purina food over the previous few months. One of my cats with intestinal cancer fortunately lived another five months after the food change, for which I am grateful.</p> <p>So, there is clearly something in Purina feline diets – including their highest-end products – that causes irritation and vomiting in cats, because those problems went away when I changed their food. To make it possible for you to compare ingredients and purity with the formulations I have been using since mid-2017, they are: Earthborn Holistic chicken flavors (canned, grain-free); Wellness Core kitten turkey &amp; chicken classic paté (canned, grain-free); Earthborn Holistic Feline Vantage chicken flavor (dry, contains rice); Evo turkey &amp; chicken (dry, grain-free); and Gerber chicken or turkey baby food (canned in jars).</p> <p>The relationship between inflammatory bowel disease, triaditis syndrome, intestinal cancer, and food. There are countless publications in the veterinary literature about the differential diagnosis of inflammatory bowel disease (IBD; a diagnosis of exclusion), triaditis syndrome, and intestinal cancer. However, clarity is emerging along the same lines of the vast research in human gastrointestinal disease: that chronic inflammation caused by food allergy, microbial imbalance, or food intolerance leads to IBD and triaditis syndrome, and then chronic inflammation over time leads to cancer.</p>

It is NOT very common to see large breed diabetic dogs and to have so many new diabetic dogs present to just our clinic so close together and all on the same food - Pedigree.	14	Years	Collie (unspecified)	Dog	46.2	Pound

EON-347728	2/16/2018 14:24	Dog and Cat Food	<p>Simply tired of reading about pet food recalls because of euthanasia drugs!! Seems the FDA doesn't care what is put in our pet's food! Since you guys don't fine or shut down anybody! So it keeps happening!! This is absolutely appalling that the United States of America allows our pets to be treated this way and the one government entity that can stop this does absolutely nothing!! You think reporting a dead animal due to euthanasia drug in it's food is good enough? You think that reporting recalls is good enough? Well...it IS NOT GOOD ENOUGH!</p> <p>I suspect the pet food companies have the FDA in it's pocket! Why else would this be allowed to go on?!</p> <p>Americans are sick and tired of this CONSTANTLY being a problem and the FDA that's suppose to be protecting our food is allowing this to happen!!! Pet food should be HUMAN CONSUMABLE!!!! The prices of dog food for already over the top yet even those bags are suspect! We have no idea who to trust and who not to and even the dog and cat food companies seem to be clueless as to where their products come from and what's in them!</p> <p>This needs to stop! We need the FDA to get off their butt and get strict on this reoccurring problem and protect the pets in this country! That's the very least you can do for our animals!!</p> <p>Shame on you! This just infuriates me to no end! What is it going to take to wake the FDA up!!! The killing off of every dog and cat in America??? I'm telling everyone I know to call or email you and tell you exactly what Americans think of your policy towards our pets!!</p> <p>This attitude you have towards our pets is unacceptable and your are suppose to be working for the American people! And I'm going to email President Trump about your lax attitude on this topic. And I'm telling all my friends to email or call you and say 'enough is enough'!</p>	1	Years	Dachshund - Miniature	Dog	20	Pound
			<p>You have this lengthy report to fill out like you actually care about our animals - all you are doing is MONITORING this! I haven't had a pet die of this yet. I had a cat get terribly ill from the Chinese melamine that was in the canned cat food years ago - I suppose that's still going on too!~</p> <p>Sign me sick and tired of the FDA not shutting down and fining these companies and for not following up on testing every pet food out there on a regular basis!</p> <p>STOP MONITORING THE SITUATION AND DO SOMETHING ABOUT IT!~</p> <p>I'm putting today's date because it's required and that these animals died euthanized or were injured by the drug. This is just heart breaking!~</p> <p>I've never contacted the FDA before about this, long over due!!!!</p>						

<a href="#">EON-347727</a>	2/16/2018 13:04	100% Natural Chicken Breast Tenders	Owner brought pet in on 1/17/18 because his rear legs seem to be getting weaker, not eating right away but does eventually eat normal amount and drinking more than usual for approximately 3-4 months. Senior blood work and myasthenia gravis titer (at owner's request) performed to evaluate issues. Myasthenia titer was negative and blood work was within normal limits except for creatinine which was slightly elevated at 2.0 compared to previous blood work done on 2/2/17 when it was 1.5. Urinalysis performed to differentiate between prerenal and renal causes of creatinine elevation. Urine strip results were normal except for +500 glucosuria. Given the normal blood glucose but glucosuria being found, the owner was asked to bring another sample in case of an error. The owner brought another sample which again tested positive with +1000 glucose in urine. It was noticed that owner had collected sample in old ice cream tub so a third sample was obtained in a completely unused container which still tested positive for glucose at +1000.	9	Years	Newfoundland	Dog	144	Pound
<a href="#">EON-347722</a>	2/16/2018 10:20	I don't have can. Gravy train. Large and small cans. Beef and chicken	My dog became lethargic 2 weeks ago. Called vet and can't afford assessment. She is weak and can hardly move, but no cries of pain. Diarrhea, not eating. Feeding chicken and rice and has perked up a tad. Still lethargic, minimal eating and drinking alot of water. Eyes are clear, but she has begun to bloat. Gravy train chunks chicken and beef is what she had. If I could get a vets opinion w/out it costing me my bill money, I would. I have been in contact with them, but if it was the dog food, then they should pay to have her looked at and if needed treat her. Heart breaking, as I thought she just took a quick turn w age until I saw the recall and my dog appears to have been poisoned. It is cruel and I don't want my dog to suffer, but how do I know? Help w this please	14	Years	Mixed (Dog)	Dog	40	Pound

<a href="#">EON-347574</a>	2/14/2018 14:20	Earth Animal No Hide Salmon Chews	<p>It was brought to my attention that "No Hide" chews by Earth Animal may be a rawhide based product. I noted troubling inconsistencies in the manufacturer materials regarding this product Specifically the company reports the carbohydrate level as being very low in the product while at the same time reporting that the chew is made nearly entirely from high carbohydrate ingredients. I sent a "No Hide" chew and a labeled rawhide chew to the University of Illinois diagnostic lab.</p> <p>The white rolled material portion of the No Hide was described as "appears to be composed of collagen like material" the known rawhide was described as "appears to be composed of collagen like material" Furthermore when compared "The histomorphology of this product [Dentley's rawhide rolls]serves as a control product to allow for comparison of this product to the product examined in case #17-217 (No-Hide Salmon Chews, Earth Animal). Based on histomorphology, the composition of the rolled product in both cases is extremely similar when viewed microscopically with a majority of the product examined in #17-217 being composed of eosinophilic material similar to that of the product examined in #17-279. Figure 1A is an image of #17-217 (No-Hide Salmon Chews, Earth Animal) and Figure 1B is an image of #17-279 (Dentley's Rawhide Rolls).</p> <p>Based on my evaluation of both products, I suspect that the product from #17-217 is composed of material similar to that of #17-279.</p>						
<a href="#">EON-347569</a>	2/14/2018 12:20	Nulo Freestyle, Wellness Chicken Entree, Wellness Signature Select Chunky beef/boneless chicken, Merrick Perfect Bistro	<p>(b) (6) cat breeder purchased female from (b) (6) in late May: supposedly healthy. She became pregnant and delivered her first litter at end of (b) (6) stillborns and 1 with a cleft palate. Since then all females that have comingled will become pregnant, about 40-50 days into gestation with develop prurulent vaginal discharge and begin aborting kittens. Her male also is acting less interested in the females. Prior to incorporating the Russian cat she has bred these cats for years with no issues. She has 2 other female cats that are completely separate because they do not get along, these two cats appear completely unaffected and have littered kittens 8 and 10 weeks ago that appear healthy. All cats are fed the same diet per the owner which consists of dry and canned commercial cat foods. An aborted fetus and placenta was sent to Cornell University for necropsy and Listeria ivanovii was cultured from the fetus and placenta in high numbers.</p> <p>Spoke with Dr Jones from Vet-LIRN who instructed me to submit this report.</p>			Bengal	Cat		
<a href="#">EON-347568</a>	2/14/2018 12:04	Blue Wilderness Adult Salmon	<p>My male cat (b) (6) developed crystals in his urine leaving his bladder completely blocked. Thankfully I got him emergency care and he will make a full recovery. I was disappointed to learn from my vet that the food he eats most likely caused this problem. He has always eaten Blue Buffalo Wilderness Adult Salmon food. My two females cat also eat this food and haven't experienced any problems, however, male cats are apparently more prone to blockages. I have reported this to the Blue Buffalo company as well in case other pet owners are experiencing similar problems with their cat.</p>	2	Years	Domestic Shorthair	Cat	20	Pound

She became increasingly lethargic throughout the day and had multiple bouts of diarrhea. At the time of her evening meal, she reluctantly ate about 1/4 of her normal portion. At about 7 PM on 2/10/2018 she vomited undigested food and her body temperature was 104.8. At about 9 PM her body temperature was 105.1. On the morning of 2/11/2018 her body temperature was 105.6. Her temperature has been slowly decreasing but today, 2/12/2018, her temperature is still elevated at 103.6 and she continues to be very lethargic and has little interest in food.	11	Months	Cattle Dog (unspecified)	Dog	35	Pound

<a href="#">EON-347216</a>	2/12/2018 12:12	Iams Proactive Health Indoor Weight and Hairball Care	Two months ago our cat <sup>(b) (6)</sup> suddenly died. Until then he had been in good health and showed no signs of illness. We had just started a new bag of Iams Proactive Health Indoor Weight and Hairball Control dry cat food. The vet suspected a heart attack. We also took our remaining cat <sup>(b) (6)</sup> to the vet, but she was not showing any signs of illness. About a month later, however, she started twitching violently and was dry heaving. After taking her to the emergency vet, ultrasounds showed that she had swelling in her colon and digestive tract, and that one of her kidneys looked larger than the other. There were no foreign objects, however, and no signs of any other illness. We were sent home with antibiotics and started her on Hills Prescription Diet I/D digestive card. Her symptoms cleared up and she was once again active and social. After a few weeks of feeding her the prescription diet, I started to transition <sup>(b) (6)</sup> back to the Iams. Thinking there may have been something wrong with the other bag which we had also given to <sup>(b) (6)</sup> , I opened a new bag. After a week of mixing the foods together, I transitioned <sup>(b) (6)</sup> back to only Iams. Within a day, all of her symptoms were back. She is twitching and vomiting. She is hiding, and lethargic. She feels hot and I believe she has a fever. She will visit vets again today to once again try to assess the problem. But to me the immediate reaction once she was only eating Iams makes it clear that her illness is directly related to the food.	8	Years	Mixed (Cat)	Cat	10	Pound
<a href="#">EON-347166</a>	2/11/2018 23:40	Friskies Whitefish & Sardines Friskies Whitefish & Tuna	<sup>(b) (6)</sup> was eating good with friskies canned food & deli chicken & turkey. I tried friskies Whitefish & tuna and friskies whitefish & sardines for a few days. Then he stopped eating & just laid in his bed. He wouldn't eat anything & wouldn't get out of his bed. I thought he was dying. His vet gave him an antibiotic to try & it really snapped him out of it. I had already stopped giving him anything with the whitefish in it. After 4 days he began eating again & appears to be fine now. I think there is a problem with that Fruskies whitefish canned cat food. Please check	19	Years	Domestic Longhair	Cat	8	Pound

<a href="#">EON-347156</a>	2/11/2018 19:20	Rachael Ray Nutrish Bright Puppy Food. (real chicken and brown rice recipe)	<p>I bought three bags of bright puppy food, it comes in the green bags. I put my puppy on it and she at first did not want to eat it which is strange because she eats everything! She eventually ate it for about a week until I noticed a change in her. She became extremely itchy...she would itch constantly, broke out in red bumps all on her tummy and she was always thirsty. I would give her double the amount of water everyday and I was washing her in dawn soap because I thought it might have been fleas with the way she was itching, but it wasn't.</p> <p>The itching did not subside, it lasted all throughout the night she could not be comfortable or sleep sound throughout the whole night. She would also wake me up in the middle of the night to give her more water because she finished it. The red bumps became bigger and started turning into rashes. She began vomiting after a week on the food and had diarrhea. At this point she stopped eating the food put out for her and I came really concerned.</p> <p>I expressed my concern to someone in the vet field (but she is not a vet). She told me what has changed with her environment or diet. The only thing i can think of was the food. She is a healthy puppy, up to date with all shots, she stays inside for majority of the day and only gets walked to use the bathroom. She also has no other contact with other animals. I immediately changed her food and began to see a difference. Her red spots went away and the rashes decreased in size. She was no longer itchy or extremely thirsty.</p> <p>I went online and began to research the product and it is made with very low quality grade food. I also read reviews on the read with other peoples experience and their dogs experiencing the same exact symptoms as my puppy.</p>	4	Months	American Pit Bull Terrier	Dog	30	Pound
<a href="#">EON-347155</a>	2/11/2018 19:20	Purina One Purposeful Nutrition Indoor Advantage	Both cats stopped eating and became lethargic. The female cat wouldn't start eating again. We thought we just had one bad bag of food, so we bought another one. Neither cat would touch it. We bought a different brand and the male eventually started eating. We took the female cat to the vet and discovered that she was suffering from acid reflux. We had to give her anti-nausea medicine, appetite stimulants and Pepcid AC to get her to start eating again.	3	Years	American Shorthair	Cat	8	Pound

<a href="#">EON-347146</a>	2/11/2018 14:56	9 Lives	On Thursday morning (b) (6) 8, these 2 cats were given a can each of 9 Lives Meaty Patè Seafood Platter 5.5 oz. UPC Code: 079100003679 - Lot #:7325803 - Exp. Date: 11-20-20. Later in the day, I found the female cat (b) (6) incoherent, and appeared to be sick laying in the yard. That night, she was in the same spot, and I picked her up and placed her in a cushioned chair on the patio. Thinking she would maybe get better on her own if I left her alone. I went out that night, and she was gone, and I've not been able to find her. I haven't seen her since, and she has never done this before, and this is VERY uncharacteristic of her. And the male cat, (b) (6), didn't act like himself either. But on Friday morning, February 9, 2018, I gave (b) (6) who still didn't seem too perky, a 5.5 oz. can of 9 Lives Tender Morsels with Real Salmon in Sauce. UPC Code: 079100000340 - Lot #: 7244803 - Exp. Date: 08-31-20. After he ate it, he vomited all over the patio table that he was eating on. He just layed around the rest of the day, and I fed him some Meow Mix dry food that evening and not the 9 Lives cat food because it appeared that it was making him sick. On Saturday morning I went out to feed them Meow Mix , and neither one came to eat. He wasn't around all that day or night, and I'm really getting concerned now that neither one came to eat that morning. They were ALWAYS there ready to be fed without fail. On Sunday morning, February 11, 2018, I went out to look for them, and I found (b) (6) walking around in the yard eating grass, which is a sign that he wasn't feeling well. But still no sign of (b) (6), so I'm fearing the worst. I can't help but to believe that these batch of Lot #'s may of been bad. And for the records, I just started feeding them this 9 Lives cat food, but not anymore. I thought it would be like a treat to them, and they seemed to like it at first. I'll stick to a different brand dry food from here on out like they've been eating for over 2 years. I think this warrants looking into considering the circumstances, thank you.	6	Years	Unknown	Cat	8	Pound

<a href="#">EON-347136</a>	2/11/2018 10:48	PURINA FRISKIES PATE POULTRY PLATTER, PURINA FRISKIES PATE TURKEY & GIBLETS DINNER	Both cats (brothers from the same litter) have been eating Purina Friskies Pate Poultry Platter and Turkey & Giblets Dinner for over a year. They eat it every day. Three days ago I noticed that both of them refused to eat the entire amount that they were fed. (Highly unusual for these brothers). This morning (2/11/2018) (b) (6) began vomiting and had diarrhea. My daughter is a certified vet tech and has examined their teeth/gums to make sure it wasn't their teeth (which would be highly coincidental for BOTH of them to have bad teeth at the same time) and they are fine. I called the manufacturer this morning (2/11/2018) to ask if they 1) made a change to the formulation or 2) have had any other complaints of this nature,, to which they replied no. Since all of the cans were just purchased within the past 2 weeks, I wanted to alert FDA in case it is the start of something. Please confirm that there isn't anything dangerous that is going on with their food. Thank you for your quick attention. Cats are not like dogs and it is not advisable to 'fast' them...	8	Years	Domestic Shorthair	Cat	28	Pound

<a href="#">EON-347127</a>	2/10/2018 23:28	Farmland Traditions Chicken Jerky Lean Chicken Breast	I provided a fresh bag of treats to my dog sitter before I left for vacation. My dogs have had these before and have gotten diarrhea, although not as severely, but I thought it was a fluke. Upon getting these treats, she was having diarrhea in the house several times per day, vomiting and became anorexic and lethargic. She went to the vet after 3 days of her condition getting worse and they had to provide fluids because she was dehydrated, an anti-nausea medication, an antibiotic and a stool firmer. Within 24 hours of the medication and fluids, she made a quick recovery. All 3 of my dogs received vet care and got antibiotics which they responded to well.	3	Years	Shepherd Dog - German	Dog	70	Pound
<a href="#">EON-347100</a>	2/10/2018 13:32	Old Mother Hubbard Classic Original Assortment Biscuits Baked Dog Treats Mini	I purchased Old Mother Hubbard Classic Original Assortment Biscuits Baked Dog Treats, Mini, 3.8-lb bag x 2 on February 1, 2018 from chewy.com. Both bags had cookies with mold on them (primarily the cheddar flavor) even though the bags were sealed with no evidence of defect in the bag or seal. They had a best buy day of 2 Feb 2019 and Lot # 2157 Made in Canada 16:50. I reported the problem to the retailer chewy.com along with the US distributor WellPet in in Tewsbury, MA with a narrative and photos. I am concerned because two bags from the same lot that were not expired or damaged had mold complicated by the fact that they were manufactured and imported from Canada.						
<a href="#">EON-347075</a>	2/10/2018 5:00	yakyCHEW medium	I gave my dog the yak chew as I have done plenty of times. After the fact it turned out this particular chew was rock solid and did not soften or dissolve as it is suppose to. He had stopped chewing on it, which is odd for him so I took it away and noticed how hard it was and that it seemed to sheer off into incredibly sharp almost knife edges. Following this I found half of a tooth just laying there. He broke/sheered his lower mandibular canine tooth, in half, down to the pulp. After an emergency trip to his regular vet, I was sent to a dental specialist who found on radio graphs that another tooth was broken in half down to the root and yet a third was broken to the root but not visible above the gum. Additionally 4 more teeth had significant abrasions. All the broken teeth had healthy roots and no bone loss or disease. The vet even commented that his teeth were in really good shape for his age (minus the recent incident). They did a root canal on his canine and had to remove the other two teeth that were broken down to the root.  I point blank asked the veterinary dentist if anything besides this chew could have caused this type of damage and they said no, it was this chew.  Since I have given my dog these chews plenty of times before with no problems and after the fact this one was clearly different, I am very concerned about these.	12	Years	Dachshund (unspecified)	Dog	19	Pound
<a href="#">EON-347068</a>	2/9/2018 23:44	Purina Friskies Indoor Homestyle turkey dinner with garden vegetable in gravy	I bought canned Purina Friskies Indoor Homestyle Turkey Dinner with Garden Vegetables In Gravy. It had maggots in it. I told the manager at the Petsmart store about it & she gave me a refund. She said maggots can occur when there is wheat in the product. She said she won't remove this item from the shelves because she didn't get a recall notice about it.						

<a href="#">EON-347052</a>	2/9/2018 18:32	Gravy train	My dog had one can of gravy train and became violently sick. It lasted seven days. We thought he had the dog flu but realized we had given him on can of gravy train when his normal food of pedigree ran out. I had to take time off work and was up with him four nights in a row. I would gladly do it again as long as my dog is ok. He is thirteen years old so it's been very hard on him. He lost a lot of weight so trying to get him back to his old self. Owner started noting inappropriate urination around Christmas which has really worsened in the last few weeks.	4	Years	Terrier (unspecified)	Dog		
<a href="#">EON-346808</a>	2/7/2018 12:28	Blue Buffalo Wilderness Large Breed Puppy with Chicken	I bought a bag of Blue Buffalo Wilderness Large Breed Puppy food at the Pet Smart located here I (b) (6) on Sunday, February 4, 2018. I opened the bag upon arrival at my home and served a bowl for my Golden Retriever. When I opened the bag I noticed that there was a bug flying around. I proceeded to remove the bag from inside our home to the garage and when I shook the bag there was an infestation of maggots, beetles, crickets, and other flies I did not recognize. It was absolutely revolting to look at. I called Blue Buffalo the next day per their business hours. I explained the situation to them and the representative did not seem surprised at the reason for my call. They did not offer to do anything to help the situation or even asked about any possible harm that my dog may hay endured. I then took the bag back to Pet Smart and explained the situation and their manager stated 'this is something we have seen so much which this kind of food from Blue Buffalo'. She explained that they have already informed Pet Smart directly and they have taken initiative within the store to prevent bug infestations in food. She also informed me that they have reached out to Blue Buffalo numerous times as well concerned with their product. Considering that this food is vacuum sealed, there is no way for bugs to be getting in after the packaging has been completed, therefore the bugs are being introduced within the production facility.

<a href="#">EON-346645</a>	2/5/2018 17:32	ProPig Starter Blend, ProPig Creep Blend	<p>This letter shall serve as notice that Orange Grove Farms, owned and operated by Ms. Meghann Ayers, is engaging in fraud, deception, false and misleading advertising; and is violating state and federal laws by repackaging and reselling branded dog and cat kibble as pig food to unsuspecting customers.</p> <p>I purchased a piglet from Ms. Ayers on December 20,2017. Ms. Ayers delivered the piglet to me with pig food that was packaged in Ziploc bags with a handwritten label that read "ProPig Starter Blend". Attached hereto as Exhibit A is proof of the delivery.</p> <p>As an industry professional with experience at the largest dog and cat food manufacturers, I noted that the food resembled a small breed dog or cat kibble. I was immediately suspicious of the food and decided to order more of it to read the actual manufactured bag.</p> <p>I placed an order for more food on December 27, 2017. Once again, the food was delivered in large Ziploc bags. One bag had the words "Propig Starter" handwritten on the front and the other read "Propig Creep Blend". Attached as Exhibit B hereto are the ingredient statements for the food that Ms. Ayers supplied to me.</p> <p>On January 3, 2018 I confronted Ms. Ayers regarding Propig. Attached hereto as Exhibit C is a true and correct copy of the exchange. Ms. Ayers did not deny that she supplied dog and cat kibble that was repackaged as pig food. Ms. Ayers refuses to provide any other packaging related to the pig food. Instead, Ms Ayers attempts to justify her behavior as something that is in the best interest of the pig. There are no trademarks or other service marks filed with the United States Patent and Trademark Office, as Exhibit C indicates for the Propig food product.</p> <p>I am concerned about the safety, well being and health of all pigs that are being fed "Propig". Ms. Ayers has engaged in fraud, and has engaged in false and misleading advertising. I urge the FDA to take immediate action against Ms. Ayers and Orange Grove Farms.</p>						
<a href="#">EON-346603</a>	2/5/2018 11:56	Wellness can cat food Chicken and Herring Pate	<p>I sent this message to Wellnesspetfood.com this morning:</p> <p>Regarding puffed up lid on wellness can cat food, 5.5 oz, chicken &amp; herring, bar code 076344089322, Lot ?WCHS4 03:38 This morning I noticed the can of cat food had a puffed up lid on top--I've never noticed anything like that before. When I opened it, some of the sauce sprayed up, and the food smelled peculiar--kind of stinky (not like it usually does). Furthermore, the sauce was fizzing, kind of like carbonated water. Needless to say, I did not give it to my cat. I covered it and put it into the refrigerator in case you would want me to send it back to you for examination. What does this mean? Something's not right.</p>						

<a href="#">EON-346595</a>	2/5/2018 0:00	Friskies Gravy Swirlers	<p>On Sunday (b) (6) I opened a new bag of Friskies Gravy Swirlers bar code 5000016858 Best By APR 2019 730110830316L01</p> <p>I gave all three cats their breakfast, lunch and dinner portions from (b) (6) thru today (b) (6) On Wednesday (b) (6), three days after the first portion of the above stated cat food, our cat (b) (6) began vomiting clear liquid with white phlegm. She stopped eating completely. Only drinking a little water as the days went on. We took her to the Vet. The Cat Hospital in (b) (6) on Friday. She was examined by the Vet. By this time she was becoming more unresponsive, not interacting with other cats or family members. The Vet stated that it felt as though she had an intestinal blockage. Her temperature was 90. He confirmed that she was dying. He gave her a shot for pain and stated that (b) (6) would pass in the middle of the night. We brought her home where she passed away 2 1/2 hours later .</p> <p>Yesterday (b) (6) our other cat (b) (6) eating habits changed. She started eating very little. She also was seen coughing after eating. This went on for about 5 minutes after she last ate in the evening. Today (b) (6) (b) (6) is exhibiting the same symptoms as (b) (6). Vomiting clear liquid with white phlegm. Her eating has changed to even more less than yesterday. Her behavior is very similar to (b) (6) prior to becoming very sick within days of passing. Our 3rd cat (b) (6) at this time does not show any symptoms of an intestinal blockage, we hope that she does not.</p>	9	Years	American Shorthair	Cat	8	Pound

<a href="#">EON-346320</a>	1/31/2018 15:00	Milo's Kitchen Homestyle Dog Treats "Simply Chicken Jerky"	<p>Purchased Milos Chicken Jerky treats for (b) (6) on Sunday (@ a Target store).</p> <p>After giving her a few (4-5?) —from late Sunday through Monday during day — she became extremely ill Monday evening. She began panting rather furiously (constantly &amp; faster than normal panting). I took her outside and she had terrible diarrhea. Over course of entire night she had to go out 3 times (the "runs"). She ran outside quickly and went in on thick, ivy-covered ground. (So couldn't assess her diarrhea, especially in the dark.)</p> <p>On the way back inside, she stalled and look a bit "nervous." So I waited with her in lobby of our condo building before heading back up with her in elevator. She then vomited. (It looked like ... a very odd "chicken pot pie" sort of — only way c of remotely describing it.)</p> <p>Finally, I put her inside my bathroom, opened a window now and put a towel down with a bowl of water —reassuring her constantly — and closed the door. (Something I never do — or have to do). I could tell she was exhausted.</p> <p>About an hour later — early Tuesday am by then—I checked on her. I could finally see her diarrhea, however, it was quite bloody. Rather shocking.</p> <p>Yesterday (Tuesday) she has no appetite and was very lethargic. She was over the diarrhea and vomiting, thank goodness. Today — Wednesday, Jan 31 — She still has a limited appetite and is more tired than usual. But her overall health has definitely improved.</p>	10	Years	Mixed (Dog)	Dog	55	Pound
<a href="#">EON-346305</a>	1/31/2018 3:20	Just Food for Dogs VENISON & SQUASH	After ingesting the food, (b) (6) started to diarrhea at night, for 3 times per night over the last 3 nights.	1.75	Years	Bichon Frise	Dog	15	Pound

<a href="#">EON-346263</a>	1/29/2018 18:08	Purina ONE Indoor Advantage	all cats came to eat evening meal as usual. have been eating Purina ONE Indoor Advantage Dry for years with no issues. new bag recently purchased from Pet Supplies Plus in (b) (6) was opened (best by Feb 2019, 72231079 1619L12), and cats began to eat. normally there is NO food left when I go back into individual rooms where fed. this time there was food left in every bowl. I'd say within 30 minutes, vomiting started by multiple cats all over the house. most of them vomited the food they had eaten and maybe one or two other times. (b) (6) simply could not seem to stop vomiting. After voiding the food completely, then her vomitus became clear and white foamy, then pink-tinged, then just outright bloody. I took her to (b) (6) Veterinary Hospital this morning where she was admitted to be treated for severe nausea/vomiting and resulting serious dehydration.	8	Years	Domestic Shorthair	Cat	8.1	Pound

<a href="#">EON-346257</a>	1/29/2018 17:24	Blue Natural Veterinary Diet WU Weight Management + Urinary Care	(b) (6) a client a prescription for a prescription food so she could conveniently get the food through the companies on line portal. Whenever the client needs food the Doctor gets an email and indicates to the company whether the prescription request is approved or denied. An email was sent for approval on approximately Jan 18. Shortly after that, a second email was sent to the Dr. Indicating that the company went ahead and approved the food since the clisn't said she needed it. This food would never have been approved by the Dr. Because 1. The client refused follow up appts, 2. The food was not working and 3. The client was transferring care to a local vet.						
<a href="#">EON-346255</a>	1/29/2018 17:04	Milo's Kitchen Chicken Meatballs	He was given 1/4 of the Milo's Kitchen Chicken Meatball one evening for bed and within a minute or two vomited the treat in whole form. This happened over and over in a 5 day period. Once I removed this treat from his routine, the vomiting stopped. During the five day period, he continued to eat his food with no reactions. The only time he vomited was after eating a treat. While the initial problem happened from 01/02/2018 to 01/08/2018. Once I returned from traveling during the week for several days. I purchased a new bag, from a different source, again only using 1/4 of the treat and the same reaction occurred on 01/27/2018. Since none of these treats were given from 01/08/2018 to 01/27/2018 there were no reports of vomiting and all food was consumed with no issues.	10	Years	Dachshund - Standard Smooth-haired	Dog	14	Pound
<a href="#">EON-346249</a>	1/29/2018 11:04	4Health Chicken & Rice Formula, 4Health Grain-Free Beef & Potatoe	We've been feeding our dog 4Health dog food for almost 3 years. The last 3 months (Nov 2017-Jan 2018) upon opening a new bag and eating she has gotten violently ill. Bloody diarrhea , vomiting, lethargic, loss of appetite. I took her to with an emergency visit to our vet the first time this happened and she was extremely low on her red blood cell count and was 1% away from having to be hospitalized. The vet informed me that her condition could be fatal if left untreated. She received nausea medicine and fluids under the skin as well as antibiotics in case it was a bacterial infection. She was almost put on special sensitive stomach canned food and got better. December I purchased a new bag of 4Health dog food and she again got sick with the same symptoms as before. I had left over nausea medicine and used that to calm her stomach as well as fed her sensitive stomach dog food from my vet. I thought maybe in was a coincidence that the food caused it and it could have been something else, so I tried 4Health dry dog food again and she is right back in the same condition as before. Something must have changed in the last 3 months with their formula or ingredients that is causing such an uproar in my dog. There are SEVERAL other reports of the same thing happening to other dogs, with the same manufacturer all in the same time frame. They can be found here: <a href="https://www.consumeraffairs.com/pets/diamond_dog_food.html">https://www.consumeraffairs.com/pets/diamond_dog_food.html</a>			Chihuahua	Dog

<a href="#">EON-346186</a>	1/27/2018 20:32	Purina Bella	I went to the PetSmart in (b) (6) with the intention of purchasing Purina Bella dog food. Upon observation of the bags of 3 lb chicken Purina Bella dog food, I noticed all of the bags had maggots in and on the packages. I notified the manager of the store and all of the bags were taken off the shelves. In reading online posts, it appears as if other people have also recently found maggots in their bags of Purina Bella dog food. For example, individuals have posted on a coupon website, Krazy Coupon Lady, recent incidents of finding maggots in their bags of Purina Bella.							
<a href="#">EON-346168</a>	1/27/2018 12:56	Blue Buffalo Basics Limited Ingredient Formula Healthy Weight Turkey and Potato	I have 3 dogs. One was on Blue Buffalo Basics Healthy Weight turkey & potato. The other two were on a different flavor of Blue Buffalo. On January 12th, (b) (6) ate his Blue Buffalo Healthy Weight food at noon and began throwing up that night around 6 p.m. (The bag of food was already about 2/3 gone, 24 pound bag.) The next day, Jan. 13th, I fed him plain rice & chicken broth twice and he was fine all day, acting normal, playing, etc. Saturday night I fed him the Blue Buffalo Healthy Weight again at around 6 p.m. Sunday morning at 1 a.m. he began vomiting again. At 6 a.m. he drank water and vomited again and had diarrhea. I took him to the emergency vet where he had a temperature of 104.5 and all his liver values were sky high. He was hospitalized for 5 days on antibiotics and other meds and is now home on antibiotics and medication for his liver. The liver values are slowly coming back down. At his last routine physical in Sept. 2017 prior to this incident all bloodwork was fine.	9	Years	Doberman Pinscher	Dog	89	Pound	
<a href="#">EON-346161</a>	1/27/2018 10:44	wholesomes grain free beef meal & chickpeas	had 2 bags of Wholesomes Beef Meal & Chickpeas 35lbs each delivered to my home from Chewy.com. exp jun/19/ lot reg 0k-pf0-0005 Opened a bag and immediately scooped a bowl for each of my Great Pyrenees dogs. Started to scoop into lg storage container and thought the food was lighter in color than usual. Then noticed it had white specks that appeared cooked in. It did not smell rancid or bad. Then I saw larger white shreds or strands of something. My eyesight isn't that great anymore so I'm not sure what it is. I opened the 2nd bag and same thing. Immediately pulled food dogs were eating and called chewy.com. They are sending more (great hopefully a different lot) Next day emailed manufacturer Midwest pet foods and sent pictures. Their response was like oh well return it to where you bought it. They didn't seem to care about seeing it or identifying what the particles are. I emailed again that I want to send them some because I want to know what it is. They said they are sending a postage paid envelope.							
<a href="#">EON-346159</a>	1/27/2018 10:16	Purina Friskies Pate Mixed Grill	I was feeding my cats Friskies Mixed Grill Pate and had scooped out part of the food for one cat and let the other one eat out of the can. The one eating out of the can suddenly stopped eating and ran away. I picked up the can and noticed something in it, and it was a large piece of heavy plastic or vinyl mixed in with the food.							

<a href="#">EON-346154</a>	1/27/2018 1:24	Purina Kit & Kaboodle	Bought a bag of Purina Kit & kaboodle at safeway in (b) (6) and upon opening the bag, it had several large clumps of kibble and a white substance, and several large clumps of kibble and a green substance. It smelled very off, and reminiscent of mold. The bag was properly sealed st time of purchase (January 24 2018) and has no rips or tears in the packaging. The "best by" date is January 2019. We have been alternating between this brand and another for two years, and our cats had some diarrhea recently; although the last bag did not look like this, I worry it may have also been contaminated, and may have been the reason for that illness.

EON-345925	1/24/2018 20:12	Blue Buffalo Freedom Grain Free Indoor Chicken Recipe for Cats	<p>On 12/26/17 we switched our 3 cats from Blue Buffalo Kitten Chicken dry food to Blue Buffalo Freedom Grain Free Indoor Chicken dry food. On 12/27/17 (b) (6) vomited once. On 12/28/17 (b) (6) vomited once. By 12/29/17 all 3 cats, including (b) (6), were vomiting profusely. We took all 3 cats to our regular vet, (b) (6) Animal Hospital in (b) (6). All 3 were dehydrated, administered sub-Q fluids, and the anti-nausea medication Cerenia. The veterinarian, (b) (6), switches us to Hills prescription I/D food. Their blood work is normal. By 12/30/17 the cats are not eating. They are prescribed Cyproheptadine, an appetite stimulant. On 12/31/17 all 3 cats are still vomiting. 2 of the 3 are not eating (b) (6). (b) (6) is vomiting bile. We rush them to the ER vet, (b) (6), because it is a holiday weekend. All 3 are dehydrated. The bloodwork and xrays are relatively normal. Excessive gas is shown in all three colons and intestines. (b) (6) intestines are inflamed. Hospitalization is recommended, by (b) (6), but we had to decline it because we could not afford it. The low end for all 3 cats for one night was \$4600+, the high end was \$7200+. We opted for the conservative treatment plan instead, which included more sub-Q fluids, continuation of medications, and the addition of Famotidine. By 1/1/18, (b) (6) and (b) (6) stop vomiting and start eating. However, (b) (6) continues to vomit. As advised by the ER vet, (b) (6), any continuation of vomiting requires hospitalization. We rush (b) (6) back to the ER and agree to the hospitalization plan. On 1/2/18 (b) (6) is transferred back to our regular vet (b) (6). He remains in their care until 1/4/18. (b) (6) and (b) (6) are rechecked on 1/2/18 and released. It should be noted that the only other food these cats were fed at the time of this incident was Blue Buffalo Indoor Chicken Entree Pate wet food. However, at the onset of the reactions, they had consumed 20/24 cans in the case. Therefore it seems more logical that the newly introduced dry food is to blame. It is in the opinion of the ER vet, (b) (6), and the (b) (6) vet, (b) (6), that these complications are beyond the typical digestive upset you would see with a food change. Advised by both vets to file a report with the Blue Buffalo manufacturer and the FDA.</p>	14	Years	American Shorthair	Cat	7.12	Pound

<a href="#">EON-345912</a>	1/24/2018 17:20	Abound Grain Free with beef and vegetable cuts in gravy	<p>I've been feeding (b) (6) canned Abound Grain Free with beef and vegetable cuts in gravy for about two years. I purchase the food from Ralphs grocery store and the food is distributed by Inter-American products. I purchased the food because it was beef and the vet believes her allergies are related to chicken and grain products. I can't afford the expensive allergy testing. After reading about a problem with some canned pet foods containing dangerous ingredients I checked the label on the Abound beef dog food. I was surprised and angry to find that the number one ingredient in this "beef food" was chicken! It's my understanding that the ingredients in all foods begin with what the food contains the most of and go down. This dog foods ingredients are listed as follows: chicken, beef broth, chicken broth, chicken liver and finally beef, etc. I couldn't understand why her skin wasn't clearing up and why she was continuing to get ear infections and sores on her skin. This company should not be allowed to label their dog food as beef when it mostly contains chicken!!</p>	9 Years	Schnauzer - Miniature	Dog	35	Pound

Radiographs were reviewed by a radiologist who revised the diagnosis to congestive heart failure and furosemide and enalapril were added. I evaluated (b) (6) on September 5, 2017 and diagnosed him with dilated cardiomyopathy with congestive heart failure.	4	Years	Spaniel - Cocker American	Dog	15.5	Kilogram
<a href="#">EON-345833</a>	1/22/2018 18:28	California Natural Grain-Free Kangaroo and Red Lentils Recipe	(b) (6) had been diagnosed with a new heart murmur a couple of months earlier, then developed difficulty breathing and cough and was diagnosed with congestive heart failure. Echocardiogram showed evidence of dilated cardiomyopathy and chronic degenerative valve disease.  *(b) (6) is the biologic niece of (b) (6) - FDA ICSR ID 2040528	5	Years	Retriever - Labrador	Dog	25.6	Kilogram

<a href="#">EON-345831</a>	1/22/2018 18:12	California Natural Grain-Free Kangaroo and Red Lentils Recipe	One week prior to presentation at a local emergency and specialty clinic, owners noted (b) (6) to be tiring more quickly when playing catch. On the day of her initial presentation to the ER clinic, she had been coughing more than usual and sank to the ground when attempting to chase a ball, but recovered quickly. At the ER clinic she was diagnosed with atrial fibrillation and early congestive heart failure. Treatment was initiated there January 20,2017, she was transferred to our clinic on January 23, 2017 for further evaluation and care. Her arrhythmia converted back to a normal sinus rhythm on January 20th prior to transfer and her congestive heart failure resolved with treatment. She had a second collapse episode prior to referral. Echocardiogram showed evidence of dilated cardiomyopathy with concurrent chronic degenerative valve disease.	8	Years	Retriever - Labrador	Dog	32.1	Kilogram
<a href="#">EON-345822</a>	1/22/2018 17:24	California Natural Grain-Free Kangaroo and Red Lentils Recipe	(b) (6) was presented for evaluation of cough, labored breathing, multiple episodes of collapse, cardiomegaly, and suspected congestive heart failure. Congestive heart failure was confirmed with thoracic radiographs and echocardiogram revealed dilated cardiomyopathy.	6	Years	Mixed (Dog)	Dog	25.1	Kilogram

<a href="#">EON-345778</a>	1/22/2018 14:20	Blue Buffalo Freedom Grain-Free Chicken Recipe Small Breed Dry Dog Food 4 Lb by Blue Buffalo	<p>Our pet, (b) (6) was a healthy and happy dog. He was in a nearby daycare - (b) (6) (b) (6) pet resort) from (b) (6). As soon as we took him from the daycare, he showed signs of dizziness, loss of appetite and extreme lethargy. We took him to the vet next day to find out that his liver enzymes were too high and his blood counts were too low. (b) (6) from (b) (6) animal hospital treated him and gave tablets to try. Despite taking tablets, our dog's condition was getting worse accompanied by vomiting and diarrhea. We took him back to the vet after couple of days. The doctor asked us to continue the tablets for couple more days to see if there's any improvement. Within couple of days, the little soul passed away. It was so heartbreaking for our entire family. Everything happened within a week.</p> <p>We suspected that something could have happened in the daycare. When we informed to (b) (6) (b) (6), he and the state veterinarian (b) (6) arranged for an inspection in the day care and could not conclude the reason for (b) (6) death.</p> <p>Meanwhile, I came across this article. Below is the link to it.</p> <p><a href="https://www.chagrinfallspetclinic.com/2017/09/14/pet-food-lead-alert-blue-buffalo-blue-wilderness-dog-food-class-action-law-suit/">https://www.chagrinfallspetclinic.com/2017/09/14/pet-food-lead-alert-blue-buffalo-blue-wilderness-dog-food-class-action-law-suit/</a></p> <p>We were feeding him Blue Buffalo pet food throughout his life. He had all the symptoms like the article say. His sudden death at a very young age must be having some kind of underlying cause. I would like to report his death to analyze the cause behind this pet food. Please help us reveal the actual truth behind this dog food. This could save many lives of pets.</p>	8.5	Years	Maltese	Dog	13	Pound

<a href="#">EON-345682</a>	1/20/2018 17:20	Digesteeze Rawhide-Beef Large	My (b) (6) at the time was given a rawhide bone called "Digesteeze" brand new product- had a special chemical for aiding in tarter control of the teeth, even though that's Not the reason I bought it..it was the only large rawhide bone they had. After I bought at Petexpress store in (b) (6). He only had a small portion and within 20 minutes had a grand mal seizure for at least 30 seconds. We took him to the ER, they were able with meds and IV solution stabilize him and he came back home late the next day. I nursed (b) (6) and realized no one was home upstairs- and horribly had to put him down a few months later due to lack of quality of life. (b) (6) could not walk at all, had to be on seizure med, and was incontinent from the day he was poisoned from that bone! I found out their meat and products came from at least two different countries. The company listed is in (b) (6) and they just distribute, they admitted this to me over the phone, after days of denial. I also got a hold of you, and was promised you would take a serious look at this case, twice..and still nothing. I was also so concerned with other buyers and their dogs, you promised to get back to me, and that never happened either. I let the store know-manager hoping they would take it off the shelf (petexpress) and they did not, in fact you could buy digesteeze anywhere you wanted and online! It still upsets me (makes me sad) that there is nothing I can do to warn others. My (b) (6) never had a health issue ever in his years (he was lucky) but I didn't take it for granted either-he was always up to speed with his shots and other meds for heart worm and fleas for example. In fact I still have a piece of that bone he ate, the other piece the vet wanted. No studies have been done, frankly I do not know this late in the game who would check it out? But if the chemical they put in it made it toxic, it would most likely be in there. I pray I get some feedback this time, just for some closure on my end and who knows, how many other dog owners?	14	Years	Retriever - Golden	Dog	76	Pound
<a href="#">EON-345664</a>	1/19/2018 14:44	Blue Wilderness Rocky Mountain Recipe Red Meat Dinner ADULT	Have been feeding with American Tradition dry dog (CHEWY) food mixed with 1/3 can wilderness blue canned dog food (12oz)-always their beef and chicken or duck and chicken, but he was getting tired of those so I ordered Blue Wilderness Red Meat Dinner /Adult for a change. The next morning he was squirting red bloody mixture and vomiting red foamy saliva. Continued for 2 horrible days, loss of appetite. Ignored any dry dogfood. I then boiled chicken breasts and white rice. He ate that and started improving. I called Manufacturer and gave all info and lot numbers and asked them to test and get back to me. Of course I have heard nothing from them. BEST BY MAR 29 20 11 13 X 62WRRS1. Switched to Zignature turkey canned with good results. The mfg never even said they were sorry or really seem concerned with the incident. Yes, I still have 2 cases minus one can.	21	Months	Mixed (Dog)	Dog	52	Pound

<a href="#">EON-345660</a>	1/19/2018 12:56	Iams proactive health minichunks	We had purchased a new bag of Iams dog food mini chunks on January 7th for (b) (6) when I opened the bag I noticed the kernels were two different colors but then noticed they changed the formula so I did not think much of it. After about a week or so she began to act lathargic, scared, and having diarrhea. On January 13, 2018 I took her to the vet and she had a slight fever and they said her stomach was probably upset. She had to get a shot and some medication along with a bland wet food. We did the bland diet for about 3 days and she was starting to act normal again then we had to reintroduce her to her normal food and it all started again! I began looking to see if others have had similar issues with Iams dry dog food and was shocked to see all the recent complaints about it. All dogs have had the same symptoms but it does not appear Iams is doing anything to resolve the issue. Our pet is like our family and to think that they are basically poisoning her makes me very upset. This food needs to be taken off the shelves immediately before any other pets get sick or die. I would like to be contacted to discuss what I can do about this terrible experience!	23	Months	Mixed (Dog)	Dog	36	Pound

<a href="#">EON-345604</a>	1/18/2018 13:45	Healthy Hide Good'n'Fun Triple Flavor Kabobs	On three separate occasions, about an hour after giving (b) (6) a Healthy Hide "Good'n'fun Triple Flavor Kabob" he would sit up from a sound sleep, would open his mouth wide, froth at the mouth, lay back down, stiffen his body and convulse. He would be incapacitated from anywhere to fifteen to forty seconds. Following the event, he made attempts to stand up, appeared disoriented for five to ten minutes and would continuously fall over. Occasionally, he would cry which is out of his typical behavior. Additionally, he has had very loose stool that has traces of mucus in it. There has been no vomiting thus far. Following the events, he would frequently urinate and drink excessively. About an hour following the seizure activity, he would return to his typical self, but ultimately was lethargic for the rest of the day. On days where he has had no Healthy Hide "Good'n'fun Triple Flavor Kabob" treats, there were no episodes like this at all.  Although we have only witnessed three seizures, we anticipate there have been more as his behavior has been untypical. For example, frequent accidents in our home, and a sense of restlessness.  ***The pack that we have given him prior to the seizures has one Kabob left, that we have saved for any testing that needs to occur. We also have the original package.	10	Years	Terrier - Silky	Dog	8	Pound

<a href="#">EON-345601</a>	1/18/2018 13:44	Blue Wilderness Chicken Recipe Blue Wilderness Duck Recipe	<p>During around mid-April 2017, I had both of the cats on Wilderness Dry Cat Food, Duck Formula. (b) (6) development was slow to start, and she began vomiting her food. This continued after I switched both cats to the Wilderness Chicken Formula. She eventually lost her appetite and refused to eat anything, and had gone from 12 pounds to 8 pounds (30% loss from her original body weight). She developed jaundice, and was admitted into (b) (6) Animal Hospital on 5/3/2017 for supportive care for the diagnosis of fatty liver disease, which included the insertion of a feeding tube through her throat. She was discharged from the hospital on 5/5/2017 at the weight of 9.18 pounds. Her feeding tube remained in place for a week after discharge, and she had a checkup at (b) (6) Animal Hospital on 5/12/2017 and weighed in at 8.9 lbs. She has had a few check-ups over the next several weeks to monitor and check her bilirubin levels and weight. Her bilirubin levels were drastically reduced after 2-3 weeks of tube feeding, and her weight steadily increased. Her tube was removed on 05/30/2017, and she weighed in at 10.70 pounds during this check-up. Her final checkup was on 06/16/2017. She weighed in at 11.35 pounds, and has fully recovered. She is also now eating normally on her own with no vomiting or any other concerns.</p> <p>During around mid-April 2017, I had both of the cats on Wilderness Dry Cat Food, Duck Formula. (b) (6) experienced itchy skin, which resulted in him scratching his neck and face very often. He developed lesions around his face and neck. Two of them were major and were roughly 0.5" in diameter. His wounds were not healing since he was scratching them. I took him to (b) (6) Animal Hospital, and was informed that his wounds on his face and around his mouth were infected. He required a shot of antibiotics, and a round of prednisone steroids for roughly two weeks. I switched both cats from the Wilderness Duck Formula to the Wilderness Chicken Formula. His lesions went away after the switch; however, he began vomiting the Wilderness Chicken dry cat food as soon as he ate it between the dates of May 8-10, 2017. I fed him wet and dry food of a different brand and he had no issue keeping it down</p> <p>I am convinced that there is an issue with the Wilderness line that is making the cats ill.</p>	6	Years	Maine Coon	Cat	8	Pound
----------------------------	-----------------	---	--	---	-------	------------	-----	---	-------

			<p>I have contacted BB several times regarding reimbursement, but my claim has been denied without providing any test results supposedly run on the batch of food which i find highly insufficient.</p> <p>I have spoken to many people regarding BB, all of whom indicated that the food had made their pets ill as well. BB had a recall of Wilderness dog food around the same time last year as when my cats became ill; this is not a coincidence to me and i have been ignored many times by BB when I have contacted them regarding the matter.</p> <p>This is unprofessional and unacceptable behavior. I have submitted a 50 page package to them providing all the requested information needed to honor a claim, and i have been denied twice. I do not want to see other pet owners go through the same thing, and I would like for my claim to be honored, thus reimbursing me for nearly 2k in vet bills to save my cat's life as the female cat would have died if i did not hospitalize her. I would also like any information to pursue legal action against BB to have my claim honored. DA Consumer protection has been notified previously, with no avail as they claim they cannot take action against businesses.</p>						
<a href="#">EON-345478</a>	1/17/2018 12:44	Natural Balance Venison	<p>There was a massive shortage of venison containing dog meals a couple months back for a couple weeks. When we finally were able to purchase the nature balance venison meal he has eaten his entire life, he wouldn't eat it. We had to change the food after four days and then the chowd down. A few weeks ago he became very ill: diarrhea and emesis all throughout the house. Having to be let out every hour at night to void his GI. A week later, the same thing happened to our 50lb lab mix who is 10yrs old and has eaten this food for 8 yrs. I gave them the brat diet and they had to go on Omeprazole and Prednisone for a week and they have been binded gastro-wise for a good five days to a week now.</p> <p>I went into preterm labor and my father came to watch kids and dogs and unknowingly fed the dogs the nature balance food which they both ate. They had been eating blue diamond chicken formula past three days no problems and bound. After eating nature balance they both became sick and are voiding bowels everywhere. Our aunts dog has also recently refused to eat this food which he had been consuming without hesitation for 6 months prior to venison "shortage".</p>	9	Years	Shepherd Dog - White	Dog	100	Pound

<a href="#">EON-345364</a>	1/14/2018 23:12	Savory Prime Cod Skin Treats Great for dogs of all sizes Healthy Choices	Company "Savory Prime Cod Skin Treats for Dogs" (www.savoryprimepet.com) sells "100% cod skin" rolls for dogs as treats. I have purchased 5 bags, plus 1 bag of their cod skin crunchy bites for me puppy in the past few months. The bag reads that they have been "inspected and certified", "veterinary recommended". I noticed a VERY shiny amber colored substance on one of the rolls from my most recent package, so I inspected each roll. All of these dried fish skins appear to be GLUED together to form a roll with glue looking like amber colored translucent epoxy, an ingredient which is toxic and poisonous and not to be eaten. I have photographed many of the rolls which I can send you, or I can send you the exact rolls. The reason I happened to notice this shiny glue is because one of the rolls has a dollop of glue showing thru the clean window in the plastic bag. I never thought to examine the 4 bags I purchased previously and fed to my pup. I was giving her 1 roll every night as a treat. I hope my puppy is not going to have health problems by consuming this epoxy glue! I also do NOT want other dogs to eat these poisonous rolls. I bought them from Amazon.com and plan to let them know about these cod skins, as well as contacting the company in California who imports these treats from China.							
<a href="#">EON-345347</a>	1/14/2018 9:20	Golden Rewards Duck Jerky Recipe	I have been giving my dog Golden Rewards Jerky Treats for about two years at the rate of one a day with no known issues. Today I opened a new sealed bag that I purchased on 01/03/2018. Today after I gave my dog her treat and was about to close the bag I caught the odor of decaying meat. I put the bag a little closer to my face and the odor was overwhelming! I am 71 years old, have hunted and fished all my life and spend a lot of time in the outdoors so I know the smell. It is unmistakable. I have not reported this to Walmart and probably will not since I do not believe they will follow up.

<a href="#">EON-345278</a>	1/12/2018 18:36	Darwin's Natural Pet Products	I fed my dog the raw duck food and shortly afterwards he vomited. Not long after that he had bloody diarrhea and refused to eat food. He was also lethargic and seemed to be in pain. I thought he might have an allergy to the food, so I stopped it and treated him for the diarrhea (gave him an anti-diarrhea and switched him to cooked chicken/rice) After 2 weeks he seemed to get better so I tried to reintroduce his raw food. He immediately got sick again with bloody diarrhea. I stopped all raw food and fed him chicken and rice for several more weeks and then started mixing in a kibble. It took nearly 2 months to finally stop him from having diarrhea. He is still recovering from this.	10	Years	Bichon Frise	Dog	12	Pound	

<a href="#">EON-345258</a>	1/12/2018 12:40	True Chews Premium Jerky Cuts	I bought the Tyson True Chews dog treats for my dogs on Sunday, January 14th and started giving them to my dogs that day. My dogs started showing symptoms that evening and those symptoms worsened over the next few days. They started refusing to eat, threw up frequently, and had diarrhea. I took them to the vet and the vet ruled out an obstruction in the bowels or intestines, pancreatitis, parvo, and several other possibilities. The only change in their diet has been the addition of these treats. We stopped giving them those treats and they have started to improve and their symptoms have stopped.	8	Months	Mixed (Dog)	Dog	33	Pound
<a href="#">EON-345256</a>	1/12/2018 11:32	Iams Proactive Health with Grass Fed Lamb	Within 24 hours after opening a fresh bag of Iams Lamb and Rice, my dog had terrible diarrhea and woke up throughout the night and into the next day. I raise Labrador Retriever puppies for a guide dog organization. This is important for two reasons. First, short of raising a dog in an institutional setting, the diets of these dogs cannot be more controlled. We feed them only kibble for their meals, we train them with the same kibble for rewards, and we stuff Kongs with moisten kibble when they are crated. We are not permitted to take them to dog parks or leave them in an outside area without supervision. They have vests and go everywhere with us. My dog ate ONLY this kibble. My last guide dog had an exclusively Iams diet and never had digestive issues. The second reason is that the very next day after submitting my complaint to the manufacturer, my guide dog organization sent out an email that Iams was discontinuing Iams Lamb and Rice so we all needed to begin transitioning our dogs to a comparable brand (i.e., Purina One Smart Blend Lamb & Rice). I immediately became skeptical and questioned whether the discontinuation was an effort to AVOID a recall. I began an internet search and found DOZENS of complaints from customers whose dogs were exhibiting similar symptoms, a few stating that their dogs ultimately died. I also learned that Iams recently changed their formula, and I realized that my bag did have the multi-colored kibble indicative of the new change. By that time I had already contacted my veterinarian brother who told me to stop feeding the food immediately and start him on a chicken and rice diet. He finally slept through the night last night, and his feces showed improvement this morning.	7	Months	Retriever - Labrador	Dog	50	Pound
<a href="#">EON-345238</a>	1/11/2018 18:08	Purina Beyond Natural Dog Food Simply 9	We were out of town at my daughters house in (b) (6). (b) (6) was given Purina Beyond, a new dog food, on Friday evening. She ate quite a bit... she also ate the next day. That afternoon she was vomiting and lethargic but not in distress. We decided to find a vet the next day even though it was (b) (6). At 3:00am Sunday morning she started having convulsions, we immediately found a 24hr hospital in (b) (6) about 45 minutes away. We wrapped her in a blanket and made the drive immediately, she died on the way there. She had just been to our vet, (b) (6) Veterinary Hospital a few weeks prior for her annual checkup and boosters. She was in excellent health. We're heartbroken...	10	Years	Terrier - West Highland White	Dog	19	Pound
<a href="#">EON-345228</a>	1/11/2018 15:44	Pedigree Dentastix	We received a bag of Pedigree Dentastix from a neighbor. On Jan 9, late in the afternoon, I gave each of our dogs one of the treats. By early evening, (b) (6) was drinking unusually huge amounts of water but, considering her high dose of prednisone, I thought it was the medication. By 1 a.m., on Jan. 10, she started vomiting and kept doing so until almost 7 a.m. She received cerenia and I contacted her vets. Vomiting was the only symptom, but it was prolonged and severe. She drank water throughout. By late morning, she seemed to be doing much better.	9	Years	Beagle	Dog	16	Pound

<a href="#">EON-345208</a>	1/10/2018 22:56	90065	Ordered some dog treats from i-Pets.com. One of the items, 10 pk Holiday Munchy Stars sku 90065, had an extremely bad smell, like something was rotting. The stars were just packaged in a plastic bag with the sku number. There was not any expiration date or lot number or anything else. I contacted I-Pets and they stated their Quality Control Manager stated that "this happens with munchy items. The reason why it has the smell is because all munchy items are made of ground rawhide which generates this smell." They then offered a replacement or refund.  I have ordered ground rawhide products for years and have never encountered this type of rotting odor before. I was also less than pleased answer.							
<a href="#">EON-345203</a>	1/10/2018 21:12	Purina One Smart Blend Lamb and Rice	I purchased a 31 lb bag of Purina One smart blend Lamb and Rice dog food for Harris Teeter at (b) (6) on 1/9/18. The bag had moldy dog food in it. The bags UPC code or 17800 14941. I believe the manufacturing number is either LN-3319-704-K4 or 72821086 1615L09 and it was bagged on 9/10/17 at 13:42. The best by date is April 2019.

<a href="#">EON-345013</a>	1/9/2018 15:04	Barkworthies Green Tripe Sticks All Natural Dog Chews	<p>Found live larvae and beetles inside Barkworthies Green Tripe Sticks. Notified Barkworthies through their website prior to 12/26/17, as unable to reach anyone in person. To date (1/9/2018), they have not responded. On 12/26/2017, I contacted the online retailer where I purchased, Chewy.com, to report the issue, and they also reported to Barkworthies and have not had a response from the company either. Chewy.com requested videos of the beetles and larvae which I supplied to them as I broke apart the treats to expose the insects. Best By date on the bag label is 8/9/2019, Lot # 2217T1. My vet doesn't know what type of beetle has infested these treats and is not an entomologist. I'm guessing other pet owners wouldn't appreciate live larvae and beetles in their pets and carpeting like I experienced. Since Barkworthies doesn't seem to think this is important, I'm hoping you do and will look carefully at insects consumed by pets after being brought in to the United States from Turkey, the source of the treats, according to the soft zip bag. You cannot see the bugs by inspecting the bag. You have to break open the treats and find them there. I don't like that our 14 year dog has ingested these bugs with previous treats from the bag. This was the first one she ate inside the house because it was so cold outside when I gave it to her. She has consumed most of the bag over the past couple of months as an occasional treat before the one that left beetles scurrying across our white carpet and larvae in the carpet fibers. After receiving/purchasing all dog treats, they are placed in a sealed ziplock inside an air tight storage container with screw on lid, so no chance our house was the source of these insects.</p>						
<a href="#">EON-345009</a>	1/9/2018 13:12	Temptations MixUps	<p>After eating Temptations cat treats he vomited and had severe diarrhea. EON-345005	1/9/2018 11:16	Darwin's Natural Pet Products	<p>My dog started having cyclical diarrhea around early April of 2017. He would have episodes of diarrhea and then it would seem to get better. Then diarrhea again, then seems semi-normal. It wouldn't go away and he kept getting thinner and thinner to where his hip bones and ribs were showing. I had taken him to the vet and suspected just Giardia so we gave him Metronidazole. Whenever he had diarrhea, I would stop his regular food and cook bland meals for him which included cooked ground turkey and add sweet potatoes. Nothing seemed to work and as soon as he seemed better he would have diarrhea again. It was until this last recall from Darwin's a couple of months ago about salmonella recall that I suspected maybe my dog was poisoned and had him tested for salmonella. Throughout 2017 I've contacted Darwin's about my dog's bowel issues to ask if maybe they changed their food formula and they said nothing changed. I also found out later that Darwin's had multiple food recalls in the past that I was never notified of. I've been buying from Darwin's since 2013. Lately the food has had consistent holes and I notified Darwin's. Initially they gave me a refund for a small amount. But later when I complained again about the holes again, they didn't offer a refund and said they know about the holes and are working on fixing it. It was about a year and the holes kept continuing. The meat looked bad, dry and discolored and smelled bad. When I asked Darwin's about it they said it's normal variation of the meat. I threw away multiple batches that looked bad. This latest recall I found out about because I subscribe to a newsletter for dog food recalls and found out about the recall that way. I asked Darwin's why I wasn't notified and they said I wasn't affected. That's when I decided to take my dog into the vet for extensive testing and found out he was suffering from Salmonella poisoning this whole time. Darwin's refused to communicate with me over email and insist on phone call. I've asked for reimbursement for the last batch of meat that all had holes in them and they ignored my request. My vet bills totally initially \$1300 for all the testing and new food, etc. I still have ongoing costs for follow up and expensive medication costs. My dog has been treated for 3 weeks now and eating new food. Undergoing over 3 weeks of constant diarrhea now because of the medication side effects and the salmonella has been very difficult as my dog is handicapped and not able to get up so I have to clean up after him often. He makes a big mess of his bed. I have a freezer full of about 28 lbs of meat from Darwin's that you can test if you'd like. Some of them look discolored as well. My dog seems to have gained some weight since the medication and new food. We will be returning to the vet for a re-test. An investigative reporter is working on me on finding out information about Darwin's recalls and (b) (6): (b) (6)</p>	7	Years	Shepherd Dog - German	Dog	65	Pound
			<p>I saw a lot of recalls in which the food I bought was included and I was never notified.</p>						

<a href="#">EON-344980</a>	1/8/2018 21:44	Butcher Shop	<p>We bought a package of pork dog bones from tj max in concord my. Our dog consumed the bone like the packaging states. With in 6 hours started vomiting heavily, blood mixed with her vomit as well as chunky fragments of bone.</p> <p>We rushed her to the vet and the noticed a foreign body in her stomach. They recommended emergency surgery to find the object. We found over 40 pieces for fragmented bone that was in 15 miles of vomit and had scraped my dogs stomach and esophagus.this packaging had no warning what so ever.our dog is in icu of a vet clinic recovering from surgery. Vet bill is over 3k so far.</p> <p>I? have photos of everything and would love to hold someone responsible. This is our family pet and we have 3 girls that are very sad. She looks like she's going to be ok.</p>

<a href="#">EON-344656</a>	1/3/2018 13:08	Canine Carry Outs Chewlotta	<p>This is exactly how I sent it to them. I also have a video. I am very upset. My pup is my family member.</p> <p>Chew-Lotta Edible Dog Snack</p> <p>I have just had a devastating encounter with the said above product that is in need of your urgent attention. I purchased this for my boxer puppy (b) (6) who just turned 3 in November and who is in great health. After reading reviews and reading the description of the "good" quality ingredients and so called vitamins, I purchased the set of two. I gave one to my pup who chewed/licked at it for a little while until he suddenly and shockingly started to salivate profusely. He appeared in complete pain and was having problems with his mouth. We inspected and found out he had actually and again shockingly broke his bottom canine tooth while "enjoying" your edible and so called safe chewlotta bone! We were in complete horror. We were even in more shock to see that when the treat suddenly fell off the counter breaking in two, it had lethal daggers on it that could break through our skin. These bones are like metal and far from edible or safe! (b) (6) now has to have immediate dental surgery along with other procedures due to this tragedy ranging in the few thousands at the moment. This is insane and caused so much discomfort for my poor puppy and damaging his quality of life. My family and I are outraged. I would like to speak with the correct authority in regards to this matter ASAP. I have recorded a video about this situation showing just how dangerous these bones truly are and what they have done to my puppy. Others and their innocent puppies should not be at risk of experiencing this horrifying situation from your so called "edible" and "safe" Chewlotta chew bone!</p>	3	Years	Boxer (German Boxer)	Dog	57	Pound
<a href="#">EON-344651</a>	1/3/2018 9:24	***Pedigree Puppy***Puppy GROWTH & PROTECTION***CHICKEN & VEGETABLE FLAVOR***BEST BY 11 26 18 23***748 A3 KKS 04 23:00***	<p>After my 10 week old Basset Hound puppy ate ***Pedigree Puppy Puppy Growth &amp; Protection Chicken &amp; Vegetable Flavor*** on Saturday 12/23/17, he started acting lethargic and vomiting continuously. He would eat about a quarter of the food in the bowl and then start vomiting immediately after. After breakfast (6am) and lunch (11:00am) of this, he stopped eating altogether and would not drink any water. Even though he was not drinking or eating, he still continued to throw up repeatedly throughout the day, in excess of 20x. On Sunday 12/24/17, I took him to the emergency vet and they treated him with IV fluids and eventually fed him a different food when he would finally eat on 12/25/17. My puppy came home and was fed a diet of chicken and rice for two days and then Purina Puppy Chow with no adverse events. This morning at 6am, (1/3/17) I tried mixing the last of the bag of Purina Puppy Chow with the Pedigree Puppy and after he ate a few bites of it, he started throwing up again. Once again, he will not eat or drink anything else-not even treats. I think there is something wrong with the food.</p>	9	Weeks	Basset - Artesian Norman	Dog	14	Pound

<a href="#">EON-344609</a>	1/2/2018 12:32	Nature's Choice Pig Ear Product of Germany	Pigs Ear treat was purchased from Dollar Tree in (b) (6) on (b) (6). Treat was given to (b) (6) and within 10 minutes of ingesting the treat, (b) (6) started shaking as if she was not getting any air. The owner started rubbing her throat thinking that something was possibly preventing her from breathing. Called granddaughter to come and help get (b) (6) to vet in (b) (6). After examining (b) (6), the vet in (b) (6) said there was nothing they could do at this facility and suggested the owner take (b) (6) to a facility in (b) (6) that would be able to care for (b) (6) more efficiently there. In (b) (6) vet began treatment with medications that seem to calm the shaking and put her in a induced sleep. The next morning when (b) (6) woke up, the shaking began and vet called owner between 5 and 6 am that morning said that (b) (6) was not responding to treatment and was not getting any better, her heart had weaken so much and ask if they could put (b) (6) to rest. Owner said Yes. 5 minutes later vet called to confirm (b) (6) had passed. Do have all paperwork from the veterinarian (b) (6) if needed. I do have another Pigs Ear treat that was purchased together at the same time. We feel this treat may have lead to (b) (6) untimely death. Perfect and healthy dog until she ate the treat.	2	Years	Unknown	Dog	65	Pound
<a href="#">EON-344590</a>	1/1/2018 23:36	Retriever Hi-protein	We typically feed two meals daily to our 3 adult Rottweilers to avoid bloat. We have fed hi-protein retriever dog food for years with no issue. Our most recent purchase was about 4 days ago. We do add warm water and soak the food during the colder months. Upon soaking kibble from this particular bag we noticed the kibble had blue specks throughout it. This was only noticable in two bowls the first feeding and all bowls the srcond feeding. Now two of our rotties have GI distress with vomiting and horrible gas. We are hoping this goes away with a food change, but can only hope for the best.			Rottweiler	Dog		
<a href="#">EON-344588</a>	1/1/2018 21:44	Tripett Green Tripe Original Formula	Get canned food from Chewy Pet food distributor - noticed color & odor of ~ 6 cans of food was markedly different as well as consistency. Also contacted company that makes product who promptly sent case of food. It came from Badger Fulfillment Group, Harvard, IL which is near plant that produced Evanger's food - recent FDA recall for pentobarbital. Now the horror story - went ahead and fed food for about 2 - 3 wks when I began noticing very foul gas, very soft/loose stool and started thinking more about food - doing some research found where someone on a site said that PetKind Tripe (generally a v good product & expensive) is manufactured by same plant as Evangers. On 12/25 the dog had a grand mal seizure and some progressive weakness. Obviously I stopped feeding the Tripe. No further issues and stool is now formed but am wondering about "what if?" I still have 2 open cans in the refrigerator. Obviously I would like to have tested. I am a (b) (6) w/ good, extensive experience and a breeder. I KNOW WHAT I SAW & THE SUSPICIOUS ASSOCIATION but am hoping and praying it was not related. OK to contact me: (b) (6)			Weimaraner	Dog

<a href="#">EON-344556</a>	12/31/2017 13:44	Organix Butcher & Bushel Chicken Wing and Thigh with Fresh Harvest Sweet Potatoes and Gravy	I purchased several cans of Organix dog food that was on sale...when I opened the can that was made with chicken and sweet potatoes, I began to give my dog a half can as I typically do...I noticed the spoon hitting something hard so I dug it out of the can...it was a chicken thigh bone...I immediately noticed other hard areas and found two more chicken thigh bones in the can...as you are aware chicken bones are potentially deadly to dogs as they splinter when eaten...luckily I did not feed my dog any of the bones I had found...I have kept the bones and the food in the fridge in case you need it for your investigation							
<a href="#">EON-344555</a>	12/31/2017 12:32	SmartBones Made with Real Sweet Potato	Gave (b) (6) a SmartBone and she began vomiting. Had diarrhea. Very concentrated urine color. Took her to the vet due to lethargy and failure to eat food. Did urine test and found elevated liver enzymes and bilirubin. Condition worsened, but at the time the cause was unknown. She was treated at hospital for four days. She survived but was diagnosed with pancreatitis and hepatitis. She almost died.  Now that she's home, I did some reasearch on these bones. They're made in Vietnam and other people have reported similar problems.	4	Years	Terrier - Jack Russell	Dog	13	Pound	
<a href="#">EON-344554</a>	12/31/2017 11:48	Pup-Peroni. Lean beef flavor	Each morning upon returning from her first potty trip outside I give her a Pup-Peroni treat. I have been doing this for almost 3 years an have never had any problems with that brand. Several days ago I purchased another package of Pup-Peroni lean beef favor treats and for the next three mornings, within 10 to 15 minutes she would upchuck. She has never done that before. So this morning I only feed her, her regular dog food and all went well as she did not upchuck.	9	Years	Chihuahua	Dog	14	Pound	
<a href="#">EON-344542</a>	12/30/2017 18:20	Primal dog food	I purchsed two bags of venison primal pet food one bag a week ago and the other this past thursday. On thursday my dog started vomiting and it smelt rancid. After her vomiting twice I looked at her bag of food, the bag I bought a week ago was 6 months expired, i decided to look at the bag i purchased thursday and it was also 6 months expired. My dog is now so ill she is in the hospital fo 2 nights, I would like something done about this and would liek to be contaxted. I have called Primal Dog Food Numerous times but no response. Please if someone can contact me Id greatly appreciate it.							
<a href="#">EON-344528</a>	12/30/2017 11:04	100% Made in the USA Beefhide	I'm submitting this to complain about the product labeled "natural beefhide" and "made in the USA." I gave one of the rolls to my dog yesterday (Dec 29th) and she chewed about 2 inches off the end. This morning (Dec 31st) she is throwing up & has diarrhea. Her fecal matter has a horrible odor that smells a little like chlorine. I sniffed the beefhide she had been chewing on as well as the bag, and they both smell like chlorine too. The packaging says "all natural beefide, no preservatives or additives," but the chemical odor leads me to believe otherwise. I am concerned that this product has been processed in a manner similar to the rawhide that has been recalled. The lot sticker says, "LOT #1742).	6	Months	Collie (unspecified)	Dog	30	Pound	
<a href="#">EON-344524</a>	12/30/2017 7:04	Merrick Grain Free Smothered Comfort Classic Recipe	I had opened a can of Merrick Smothered Comfort Grain Free Classic Recipe dog food and found a rather large bone in the container.							

<a href="#">EON-344493</a>	12/29/2017 12:08	Iams Proactive Health Grass Fed Lamb, Iams Proactive Health Pate with Lamb and Rice	I switched dog food on December 10th 2017 from Beneful to Iams Dry Proactive Health Grass Fed Lamb and canned Proactive Life Lamb and rice. On or about 12/20/17 My oldest dog (b) (6) threw up and the food was undigested. Just thought maybe she didn't feel good. On 12/24/17 I fed both my dogs (b) (6) and (b) (6) (8 month old puppy) around 11am and then my husband took them for a walk at 3:45pm everything was fine. When they got back home my husband went to let them in house and (b) (6) could not get up and she was breathing really hard (it looked like she was having a heart attack) really thought she was going to die. My husband layed on floor with her all night she got up and got a drink of water then he took her out to go potty and she threw up again same thing undigested food this had been approx 12 hours since she ate. She made it threw the night and the next day Christmas but she was not her self. on 12/26/17 I took (b) (6) to the vet and they took blood test. she wasn't sure exactly what it could be but her first question when the blood test came back is could she have gotten into rat poison? I said NO we don't have that and we keep a very close eye on both dogs. After (b) (6) got home and I fed her again the Iams food she became very lethargic and she was the same as the 24th she acted like she was going to die. Again later that night threw up undigested food and shortly there after she started acting a little better She is still not herself but I am not feeding her any Iams food at all. Just rice and chicken. I fed the puppy the Iams food also and last night she threw up undigested food she was not acting like my older dog but she didn't feel good. So we went on internet under consumer affairs and found out that a lot of people are having the same issues and dogs are dying. (ConsumerAffairs.com) as of 12/25/17 there have been 690 Iams dog food consumer reviews and complaints. I called Walmart and told them about the dog food I bought there. I called my vet and told her and she is going to look into it also and in a couple of days taking the dogs back to vet. Please something needs to be done I would like to have the dog food tested but I am under the understanding that can be quite expensive.	10	Years	Pointing Dog - German Short-haired	Dog	74	Pound
<a href="#">EON-344470</a>	12/28/2017 15:12	Purina Beneful Incredibites Dog Food	He started drinking an excessive amount of water and wanting to eat more. He initially gained weight, then he started losing weight. He had diarrhea for 2 or 3 weeks. we got that cleared up. He started having problems with vomiting (b) (6). We took him to Emergency Animal Clinic. They gave him a shot for pain, a shot for nausea and a sub-q fluid injection. They thought it was pancreatitis. He was good until the night of (b) (6) when he started throwing up again. We took him to our regular vet the next morning and his liver enzymes were very high and his sugar was elevated. The vet said there was more going on than just pancreatitis. He died suddenly the next morning. His symptoms were very similar to our other dog that had died in (b) (6) (we thought from old age). I got to wondering if it might be related to the dog food they were eating, so I googled if there had been any reports of problems with Beneful Dog food and found out that many consumers had reported sickness and many deaths of their dogs while on this food. The symptoms were all similar to what happened to my dogs including increased thirst. I believe this should be investigated.	6	Years	Dachshund - Standard Smooth-haired	Dog	25	Pound

Soon afterwards, she started acting strange, she would sit with her head hung down and wouldn't eat her dinner. She became lethargic and would just lie around, whereas she is usually a very energetic dog.	4	Years	Catahoula Leopard Dog	Dog	75	Pound
<a href="#">EON-344227</a>	12/24/2017 13:28	Beneful dry dog food. I threw out bag	Ran out of regular pet food, purchased emergency Beneful Purina at CVS, (b) (6) . Dog started to swell, f, stomachache, eyes ,become extremely itchy, went to vet who administered prednizone & benedryl. Dog responded to meds and is back to normal. Back to regular food. I havw since learned that there have been many reports concerning the safety of Beneful. I trust FDA to alert consumers to the dangers of dog food but you have failed. Why is Beneful still being sold?Thank goodness I was home to see the affects of this food that should be used as rat poison.	3	Years	Schnauzer - Miniature	Dog	20	Pound
<a href="#">EON-344190</a>	12/23/2017 10:56	Living World EXTRUSION	This package came with few white strange looking pellets. I contacted the manufacturer and they assured me that those white pellets are completely safe, Despite me asking they were very careful to avoid confirming or denning if these pellets were originally supposed to be in the package. I did not feed my bunny those white pellets, but I did give him the other pellets from the same package. After eating these pellets my bunny had a serious digestive disorder to the point that he stop eating. I had to force feed him for few days with a different product and he recovered. I informed this situation to the manufacturer and the only thing that they said was they take seriously this kind of inquiry. Besides this one line reply, so far they did nothing.				Rabbit		

<a href="#">EON-344184</a>	12/23/2017 0:12	Golden Rewards Sweet Potato Wrapped with Chicken	(b) (6) consumed up to two treats and had a rapid decline in health. He had several events of emesis and small sharp chicken jerky was found. These were sharp and shaped like a shark's tooth. After, notably he declined in energy, weak, stop eating or drinking water. He was taken to the vet today, 12/23/2017. The vet referred him to the emergency hospital. His blood was tested twice by the vet and hospital. He has an increased wbc and bilirubin and low rbc which resulted in hospitalization. He required a blood transfusion; x-ray, sonogram, fluids, and others. He is still being treated.	8	Years	Terrier - West Highland White	Dog	22	Pound

He has been on this treatment for 1 month now and is doing well and his polyuria and polydipsia has resolved.	8	Months	Poodle - Standard	Dog	22.4	Kilogram

<a href="#">EON-344004</a>	12/18/2017 12:24	Small Batch Dog Freeze Dried Duck Batch Slideres	Suspected labeling inaccuracy and/or inappropriate nutrient content for Small Batch Freeze Dried Duck Sliders. The guaranteed analysis on the package states that the minimum calcium is 3.3% for the dry product ("guaranteed dry analysis") and 0.7% minimum after being reconstituted. Since the product is packaged dry, the 3.3% is assumed to be the "as fed" amount rather than a dry matter analysis. With a calorie density of 4400 kcal/kg, this value converts to a minimum of 7.5 g Ca/1000 kcal, which is in excess of the AAFCO maximum for dog foods.							
<a href="#">EON-344003</a>	12/18/2017 11:04	Canine Care Out Beef Flavor	<p>My precious Boston Terrier died on (b) (6). I have him the Canine Carry Out Beef Flavor treat that he never had. He chocked on it immediately. He suffered an agonizing death, although I tried to revive him, he died in my arms. He was a cancer survivor, but had no serious health issues the last three years. He was in a perfectly good health and was very happy. He had no allergies either. This treat killed him instantly. I contacted J.M. Smucker company, they offered to help initially, but as soon as they received the residues I kept, they cut all contact. They said they "tested" the treat but it met "their standards". I never received a toxicology report and I believe they tried to cover it up. The treat seemed too thick, slippery and looked it was an absolute chock hazard! They offered absolutely no compensation for my loss. I documented the incident by a video message I recorded for my husband. It shows that my dog did not die of natural causes. Their behavior is absolutely disgusting and I think violates consumer protection laws. I just wanted some of my expenses covered because I had to purchase a new pair of dogs, they were expensive, and now need a lot of supplies and care. Nothing will ever replace (b) (6)</p> <p>I am writing this report because I want the company to finally take responsibility for their wrongdoing and make this terrifying loss up to me as much as they can and as they should. I suffered have a facial scar while I desperately tried to revive (b) (6) However, the scar in my heart stays forever! I believe the beef flavor product should be tested independently and be drawn from the shelves, if it poses a potential risk of harm to dogs. Consumers should be aware! Thank you for your help.</p>	12	Years	Terrier - Boston	Dog	20	Pound

She also had countless abdominal/rectal cramping and whimpered in pain. There was nothing else introduced into her diet that was out of the ordinary.	8.5	Years	Shih Tzu	Dog	10.3	Pound
<a href="#">EON-343853</a>	12/14/2017 12:12	Kirkland Signature Nature's Domain Turkey meal and sweet potato	I have been feeding my dog Kirkland signature for several years. I bought a new bag November 2017 and my dog started throwing up every morning. I figured he just hadn't eaten enough, was getting hunger pukes. A few weeks go by, still puking. Talk to my vet, she says I likely got a bad bag of food. So I went back to Costco, got another bag. Gave him chicken and rice for two days before returning to kibble and he stopped puking. Opened the new bag yesterday, he was back to puking this morning. Something is wrong with that brand of food now, not sure what.						
<a href="#">EON-343845</a>	12/14/2017 10:16	Kirkland Signature Nature's Domain Beef Meal & Sweet Potato Dog Food 35 lb.	I purchased a bag of Kirkland Signature Nature's Domain Beef Meal & Sweet Potato Dog Food 35 lb from the Costco store at (b) (6) on Tuesday 12/5. We began feeding her this new bag of food on Thursday 12/7. By Saturday 12/9, she was appearing lethargic. By Monday 12/11, she vomited. She proceeded to vomit up her food for three more days. I stopped feeding her that food and fed her rice along with small amounts of another, different brand of dog food and the vomiting stopped. Since we stopped feeding her the Kirkland bag of food, she has improved. We are working with our vet to ensure that she continues to recover.	6	Years	Shih Tzu	Dog	13	Pound
<a href="#">EON-343838</a>	12/14/2017 2:04	Blue healthy living adults	My 14yrs old using Bufalo healthy living, got sick yesterday after having eat the food for space of 2mo She is having diarrhea.	14	Years	Persian	Cat	12	Pound
<a href="#">EON-343837</a>	12/14/2017 1:52	Blue healthy living for adult Purple bag	(b) (6) is a Savannah F2 cat; 3yrs old and being on Blue purple bag for the past 3yrs; however recently bought a color blue bag since seems that they change the colors and my cat started to have digestive issues. I went to the veterinarian and they prescribed medications for diarrhea, she improved a little bit and started to eat again the same food, one week later she started again with diarrhea and vomiting, so I had her on her veterinary again, she tested for few exams which came back normal, but waiting for the results on others related to her gastrointestinal area. Today my other cat which is a Persian 14yrs old becomes sick with diarrhea. Thinking in other cat that I have a Savannah 7month old eating the same brand 1 1/2 month ago, got sick with diarrhea and seizures, as sson I changed his food everything stopped. So, looking into all these facts I believe this brand is having problems and sickening my cats; should be investigate and reimburse all money invested that by now is \$1,100 for two of my cat and not including my Persian which become sick today.	3	Years	Wild cat	Cat	11	Pound
<a href="#">EON-343832</a>	12/13/2017 22:00	4Health Lamb & Rice Formula	My dog has severe diarrhea with a lot of blood in it.						

<a href="#">EON-343830</a>	12/13/2017 21:48	Wild Calling! Trot'N Tommy adult cat food	I bought 9 cans of Wild Calling! turkey for my cat. Upon opening the first can I saw what appeared to be black blobs throughout the food, which I initially thought might be normal as I've never bought this brand prior. After 2 cans my cat became lethargic and refused to eat the food (not normal for her at all, she's usually ravenous). All of the subsequent cans presented with the same discoloration, and I discontinued feeding her the brand. I brought the issue to the attention of Pet Supermarket, who opened the cans they had in store, were in agreeance with the sight of it, and called the company to report the issue. They informed me that the company did not answer and the store left them a message. My cat seems to be increasingly recuperating but I don't know if she has suffered irreversibly or what damage this may have caused.			Domestic Shorthair	Cat		
<a href="#">EON-343795</a>	12/13/2017 13:56	Purina Beneful Originals With Real Salmon Dry Dog Food	(b) (6) was found dead in her cage with large piles of vomit. All of a sudden she stopped eating the food. I purchased the 5 oz cans because she was eating a lot. I opened one of the cans and there seemed to be black clumps sporadically in the wet canned food. The dates on the can are 17OCT19. I dont know which one is the year, but she is not eating the food anymore and now im switching to another food.						
<a href="#">EON-343782</a>	12/12/2017 21:32	4Health Grain Free Turkey & Potato Formula Adult	For the last month dog had been eating new formula. He has trouble chewing on the new formula size as it is too small. He occasionally (1/5 meals approx) chokes on a piece or more. He throws up the food, undigested, at least 1x weekly, and up to 3x weekly over the last month. He throws up, digested or bile, approx 1.5xbiweekly. Dog did not have issues with throwing up previously. Dogs fun character and personality have visually diminished. Dog has been acting more and more lathargic with new formula to a point where he is not active for most of the day (someone is home all day and get no longer has been following me around) Extra smelly farts and lightened stool color Dog used to get "zoomies" where he would run around like crazy for a couple minutes multiple times daily, has not done so for days.	2.5	Years	Crossbred Canine/dog	Dog	21	Pound

<a href="#">EON-343724</a>	12/11/2017 17:04	Ol' Roy Strips in Gravy Ribeye Flavor	<p>3 days ago I bought 4 cans of canned dog food of the Ol' Roy brand (operated under Walmart) at Walmart on (b) (6). I do not usually buy this brand. They were 2 cans of chunks (turkey and bacon, chicken) and 2 cans of "meaty strips" (filet mignon and a steak flavor). They were NOT the ground variety. His usual canned food is also never the ground variety, always chunks or "strips with gravy". We had run out and had reports of snow coming, living in (b) (6), snow could be nothing or we live like we're under siege for a while until it clears, so I had to get something. Gave him 1/3 of the can with normal dry food (he has 2x daily for over 1 year and has never had any adverse reactions to the dry food) at 6pm. At 9pm that evening, he vomited about the size of a golf ball. That evening he was shaking as he lay next to me on the sofa. Being a short-haired dog, I attributed it to the winter temperatures and covered him with a light blanket. The following morning, he vomited 3 more times between his a.m. feeding (7a.m.) and when I left (11a.m.) He had several more vomiting episodes throughout the day, increasing in size (~80% of his evening meal) and a few smaller ones after that. Most of those vomiting episodes were clear saliva/fluid/and chunks of undigested food. That same day, starting at 2pm and occurred until it was an almost constant occurrence (90% of the time) until noon of today (when I ceased the addition of the canned Ol' Roy food (the last feeding of it being last night-- 2 1/2 days of 6 feedings ~2 full cans)and restarted the addition of his normal brand of canned dog food (the first feeding of the normal food being 6:30a.m. this morning), he was shaking, both during a laying down position and a seated and standing position. It began with a slight shivering motion, then one paw would tremble (note this is NOT the leg that he had surgery on), then would be a full body motion, causing him to have to lay down. He also began sneezing, a few times in a row the first evening I gave him the Ol' Roy food, and has been increasing in both the number of sneezes in a row, the amount of "rows of sneezes" and the intensity of the sneezes, leaving him almost 'worn-out' for up to 10 minutes following a sneezing fit. Combined with the increasing occurrences of vomiting, shaking and lethargy, he is similar to a person in the middle of fighting a month long flu. I ceased the Ol' Roy canned food yesterday evening and after restarting him this morning on his normal brand of canned food, he vomited up the amount of a gumball size of saliva and a piece of undigested food but nothing more since then.</p> <p>**The same symptoms occurred a few months ago when we again fed him 2 cans of chunks Ol' Roy canned dog food. We gave him them and he presented the exact same symptoms (vomiting, sneezing fits, lethargic, and shaking) a few hours after the first half of the can was given. The symptoms ceased when we went through the 2 cans and he went back to his normal canned food. **I attributed that past occurrence as just a "bad batch of dog food." But after this occurrence, I know that a "bad batch" is the normal for Ol' Roy dog food. I will never be giving him this again and after being warned by other pet owners I know that have tried this brand, I know this was not a singular event but a widespread and very frequent incident.</p>	6	Years	Bullmastiff	Dog	100	Pound

<a href="#">EON-343400</a>	12/10/2017 11:08	Blue Buffalo Blue Wilderness Chicken Recipe Puppy	Upon consumption of blue buffalo/blue wilderness dry dog food kibble my dog started having the following symptoms. My dog began vomiting and having diarrhea. The symptoms progressed and got worse within 7 days with more frequent vomiting, diarrhea, blood in stool and vomit and dog was dehydrated and lethargic. We took to the vet who ran a series of test, ruled out parvo, x-ray was good. All standard vital test came back normal, dog was in Animal hospital for 2 days on iv fluids and medicine. We took dog home with improved health and he resumed once again the blue wilderness kibble and he soon began exhibiting symptoms again of diarrhea and vomiting. Our other dog began to exhibit same symptoms and we then took them off the blue wilderness food and they began to improve in health once no longer eating the blue wilderness food. The common denominator in this situation was the food. Our vet informed it could be the food since my dog is of healthy stature.	2	Years	Pinscher - Miniature	Dog	10	Pound
<a href="#">EON-343388</a>	12/9/2017 22:52	Golden Rewards Chicken Jerky Recipe	My dog has been throwing up often and recently has seemed to have problems with his digestive system. After doing lots of research and observing him closely it seemed like every time he ate the "Golden Rewards Jerky Treats" he would get sick soon after. The past month I have been back and forth to the vet because his belly was extremely swollen and he would cry during the night. To find out he had a EXTREME bacterial infection and had Irritable Bowel Syndrome (IBS). The treats seem to have always made him throw up shortly after, but I always noticed the expansion of his stomach within the last 3-4 months. He is currently on tons of medication and we have spent over \$800 just to make sure he is taken care of. He is a service dog and it has really affected me tremendously not having him.	8	Years	Mixed (Dog)	Dog	23	Pound
<a href="#">EON-343367</a>	12/9/2017 13:24	Feline Greenies Dental Treats Catnip Flavor	All 3 cats are throwing up after they eat the Greenies Cats treats. I did not give it, they did not throw up. As soon as I give it they throw up within one day all 3. I read about this issue online, and a lot of cat and dog owners have the same issues with Greenies, actually going on for years and many pets died due to toxic ingredients from China.	7	Months	Domestic Mediumhair	Cat	7	Pound

<a href="#">EON-343342</a>	12/8/2017 18:16	Beneful Chopped Blends with Salmon Sweet Potatoes Brown Rice & Spinach	My dog is severely allergic to chicken. I gave him this dog food because the label said it was made with salmon. Upon my dog eating this dog food, his symptoms related to his chicken allergy returned. So I decided to read the INGREDIENTS listed in tiny print on the BACK of the food label. The second ingredient listed is CHICKEN! .The first ingredient is water so technically this is mainly CHICKEN! That is misrepresentation and false labeling. A label should clearly state on the front what is inside the container of food. Not all people should have to read the list of ingredients.	13	Years	Retriever - Labrador	Dog	80	Pound

<a href="#">EON-343330</a>	12/8/2017 16:16	Taste of the Wild Pacific Stream	Dog was eating Taste of the Wild Pacific Stream since 2015. It was always purchased at the (b) (6) Tractor Supply store. They opened a new bag and (b) (6) ate it for 3 days then refused to eat it. He started slobbering and was treated with Amoxicillin for a possible tooth infection on (b) (6). He did not improve and was brought to my office on (b) (6). By this time he had lost about 15 pounds. He started having bloody, putrid diarrhea. We started IV fluids and did a CBC and comprehensive panel. The tests indicated a bacterial infection (high neutrophils) and liver function issues (bilirubemia, high ALP). We added an antibiotic to the fluids and did a fecal culture. The culture was positive for E. coli and Salmonella. (b) (6) died 12 hours after admission to our facility. The dog food had already been returned to Tractor Supply for a full refund. The other household dog would never eat this particular bag of dog food, but had eaten it in the past. It did not get ill.	5	Years	Rottweiler	Dog	85	Pound
<a href="#">EON-343321</a>	12/8/2017 11:48	Chinese Style Cured Barbecue Pork Yangtze	Our dog (a 10 year old Pomeranian Chihuahua) seemed to have developed hyperthyroidism from an exogenous source. I filled in a report about chicken jerky treats, but she also consumed a lot of a human food Chinese style pork from Yangtze / Tall Tree Farms (Kent, WA) during this period. This report is for this product because we are not certain of the source. She recovered after discontinuing both.

<a href="#">EON-343155</a>	12/5/2017 12:56	Purina ONE Smartblend True Instinct Formula with Real Turkey & Venison	I purchased a large bag of Purina One True Instinct for my 4 Shih Tzu's at PetSmart in (b) (6) on approximately 11/20/17. They have been eating this brand for quite sometime and I have never had an issue. I brought the bag in and stored it, unopened, for one week in my laundry room where it is cool and dry. On 11/28/17 I opened the bag in order to feed my dogs. I usually pour the contents into a plastic dog food container in order to keep it sealed and fresh. As I was pouring it I noticed something white coming out. When I touched it, it felt like cobwebs. I put the bag down and looked inside. I was absolutely horrified to see the food covered with this "cobweb" like substance and FILLED with LIVE MAGGOTS. As I looked at the food that I poured into the container it was crawling with maggots as well. I could not believe what I saw!! I immediately took pictures and wrote to Purina in an email with the pictures attached. I just couldn't believe what I was looking at so I then called the 800 number. The representative was very nice, took down all the information and apologized. I asked if there had been a recall of the food or perhaps maybe there should be. She said the situation would be reported. I did not hear not another word from Purina (no email, no call) until yesterday when I received a check for \$25.99, the amount that I told the rep that I paid for the bag, four \$1.00 coupons off a purchase of another bag, and a standard note thanking me for being a customer. I can't believe the condition that I found this food in and no one is doing anything at all to notify any other consumers!							
<a href="#">EON-343153</a>	12/5/2017 12:36	Blue Buffalo Divine Delights Rotisserie Chicken Flavor in Hearty Gravy	My dog was perfectly healthy as documented by a very recent vet checkup. <a href="#">EON-343112</a>	12/4/2017 11:56	Natural Balance Platefulls Indoor Formula Turkey & Duck Formula in Gravy	Both cats have been eating Natural Balance Platefulls (many different flavor varieties) for several years as their main source of food. Between the two, they share three 3-oz packages per day. I purchase the packets in bulk through Chewy.com. The last shipment contained the Natural Balance "Turkey & Duck Formula in Gravy" (Lot 7143407 66ID M7; exp 05-23-19). Normally both cats DEVOUR their food packet in several minutes, regardless of the flavor. But on three different occasions with this new shipment, they have either vomited halfway through consuming, or just not finished the dish, or both. We have not seen this behavior when we serve them the two other flavors received in our shipment.	6	Years	Domestic Shorthair	Cat	9	Pound
<a href="#">EON-343111</a>	12/4/2017 11:20	Healthy Hide Good 'n' Fit Skin & Coat Chews	This product is a hazard for dogs. I found my dog choking and unable to breath after he started eating one of these sticks. Once the product is in the mouth of the dog, the stick unrolls and gets really difficult to be swollen. the makers even have a Caution note on the package which I am sure no one reads it because you won't think you have to supervise your pet to make sure he isn't dying.						
<a href="#">EON-343106</a>	12/4/2017 10:32	Purina Busy Bone Mini	Gave my 3 dogs Purnia Busy bone November 25, 2017, within an hour (b) (6) was drooling/foaming at the mouth could tell the rest of the day she did not feel good would not eat that evening. Next day she only drank water would not eat, laid around a lot, did not look like she felt good. Took her to vet next day-got AD emergency care food, vet did blood panel, put her on Cerenia 60 mg tablets, Cerenia 10 mg/ml, Metronidazole 250mg tablets, Amoxicillin 500 mg, Baytril/vetalog/B12 injection, did fecal test, paper says GI disturb/pasty stool/anorexia. Had to force fed her for 2 days, gave her amoxicillin x2 a day AM & PM, also gave her the nausea pills x3 a day AM & PM, two other pills gave her one a day for 2 days. By Thursday she was back to herself. The day this happened I researched online found other dog owners reports with same issue due to feeding purina busy bone, this lead me to research further which had me considering that purina smart blend chicken that I have been feeding since last year has caused (b) (6) seizures. (b) (6) my other Siberian husky her brother had a seizure on November 3. My daughter has the parents and 2 siblings of the dogs I have they do not have seizures the dog food brand is the only thing we do differently. November 26th threw away all purnia and went to a more natural food brand, will see if the seizures stop. The busy bone research from (b) (6) illness lead me to the research of the food. My rottwellier (b) (6) dug holes ate some roots and dirt for 2 days after consuming purnia (b) (6) and (b) (6) was not as active. My vet (b) (6) Veterinary Clinic, (b) (6)	2	Hours	Siberian Husky	Dog	76	Pound
<a href="#">EON-343086</a>	12/3/2017 16:32	Beneful	My very healthy four year old pit bull was a happy energetic playful loving boy. Every night I mix a can of wet dog food with his dry food for dinner. I usually buy the savannah crockpot all natural cans but that day the vengeful Putin's wet food was on sale so I bought that. Well I fed it to him for dinner and by late that night he was acting funny he didn't wanna play or eat a treat he was just sleeping. By the next day he became violently ill puking green. We rushed him to the vet to find his red blood cells were all finished in his body and he was suddenly anemic we then rushed him to the animal hospital where he became yellow in his mouth and all over his body. And well on (b) (6) our perfectly healthy family pet died. I have no doubt in my mind that it was that can of food.	4	Years	Pit Bull	Dog	42	Pound

EON-343074	12/3/2017 12:20	Kirkland Signature Super Premium Healthy Weight Dog Formula Formulated with Chicken & Vegetables	<p>On 11/1/2017 I opened a new bag of Kirkland healthy weight dog formula (chicken and vegetables) bag of food bought 2 days prior from Costco in (b) (6). My 3 dogs have been on this food for years dogs ages are 2,5,12 yrs old). After 2 days of this food my first dog started not feeling well. She eats about 3/4 more than the other 2 dogs. I continued to watch her and within 24 hours she was vomiting and diarrhea. Completely not thinking it was the food, I continued to feed the other 2 it. I gave the sick one a bland diet for 12 hours until the vet opened up the following morning. That night while waiting for the vet to open it turned to bloody diarrhea and bloody diarrhea and she was completely lethargic and not well. We took her to the vet that morning and the first thing that was ran was a parvo test. With all the blood in her stool and vomit- and just the way she was acting I thought it was parvo. Even though she's been vaccinated. I thought all of this just due to the fact I've been in the veterinary field for the last 12 years. With in 24 more hours the other 2 dogs started to get sick with the same exact symptoms. Bloody stool, lethargic and bloody diarrhea. We took them also in and they received fluids, medications and still testing. The vet said they're stomach and intestines were completely infected and to stop feeding the food ASAP. I have been in contact with a DVM from Kirkland and she requested the records, invoices and labwork this has now been going on for a month, and she is now not returning my emails. It's always something that she doesn't have and I make sure that the vets send it now to me so I can send it to her- so there is no more prolonging this. I have told her I still have the food and the bag that it came in. The first couple weeks of communication wa that she was going to get our \$2000 reimbursed and then all of a sudden things got very quiet. All of a sudden she told me it wasn't the food and that no one else have complained about this diet so it couldn't have been the food. I hVe told her that is not ok- and said a number of times something is wrong with this food and or even the bag that it was contained in. I still have this food and bag and they still don't want it. This is not ok- and since the dogs finished all medications and I have changed they're diet they are fine. Fecal tests all came out cleared of anything, parvo of course was negative so this sickness that hit all three was the food. I am looking for some help to make this public, fight for my reimbursement due to this food and hopefully after me speaking up- others will too.</p>	2	Years	Mixed (Dog)	Dog	50	Pound
			<p>I can not afford to spend another \$1000 (and counting) for my other 2 dogs because of this. Is there some sort of reimbursement for they're treatment? Is there a way to find out if in fact it was this food? Do I report this to anyone else?</p> <p>I am so scarred that my other 2 dogs that are still at home and not hospitalized are too old to handle what my hospitalized dog is going through right now.</p> <p>I bought the food at the (b) (6) location and get you any and all paperwork needed.</p>						

<a href="#">EON-343073</a>	12/3/2017 11:12	Pet Carousel Natural Beef Knee Cap	Before leaving for work in the morning 2-3 weeks ago, I gave my dog (b) (6) a Pet Carousel brand "Natural Beef Knee Cap. When I returned home about 4 hours later, he seemed sad and not his usual, energetic self, and I could tell he was having digestive problems. He mostly lay down and, while he slept, his body shook periodically and his intestines made stretching noises (like snapping rubber bands). I cared for him (giving him only water and broth) and watched him overnight, planning to take him to the veterinary medical hospital if things got worse. The next day, he gradually progressed, and we went for a walk around noon, during which he had a bowel movement that seemed to have blood. After that, he recovered completely and continues well to this day.	1	Years	Hound (unspecified)	Dog	30	Pound
<a href="#">EON-343069</a>	12/3/2017 10:00	Ultra Chewy Natural Dog Chews Beef Knuckle	It was discovered in the early morning hours 8/8/2017 that (b) (6) had experienced diarrhea and vomiting throughout the night as evidenced by the mess on living room floor. He was taken to the vet and received a comprehensive diagnostic series of tests. An obstruction was suspected, but results were inconclusive. The Vet asked us a number of questions including, "are their any new 'treats' you're giving (b) (6) We answered no. We later discovered that he did have a 'knuckle bone' in the back yard that I had completely forgotten about. When the news hit the media about these treats, I put two-and-two together and wanted to report this to add credence to the claim that these treats are unsafe.	12	Years	Retriever (unspecified)	Dog	62	Pound
<a href="#">EON-343057</a>	12/2/2017 21:08	Cloud Star Wag More Bark Less Oven-Baked Soft & Chewy with all natural Gingerbread Flavor	Cloud Star Wag More Bark Less Oven Baked Soft & Chewy with all natural gingerbread flavor snacks are mislabeled. The front clearly says "Free of wheat, corn, soy, colors, and artificial flavors. On the back of package, in the ingredients statement, the first ingredient is wheat. I did not purchase the product. <a href="#">EON-343019</a>	12/2/2017 7:16	Golden Rewards Chicken Jerky Recipe	<p>November 10 while shopping at the above location my wife and myself purchased a package of "Golden Rewards Chicken Jerky Recipe" - product code 068113107019 - for our 4-year-old yellow lab\husky mix dog named (b) (6). The evening of Saturday, November 18, a couple hours after (b) (6) supper of cooked chicken breast, rice and some cheese I took her out for her evening potty break and upon our return inside I gave her one or two pieces of the subject product as a last snack for the day. I watched her consume the product and was personally impressed at the dryness of the product as (b) (6) crunched and chewed and swallowed the treat. She appeared to like it well. I was awoken at 5:30 the following morning at the sound of (b) (6) yacking and vomiting on my carpet. When I switched on the lights I was horrified to find approximately a cup of brownish vomit containing what appeared to be about ¼ cup of red chunks resembling pomegranate kernels. My wife and myself got dressed as quickly as possible, I collected some of the vomit and we took (b) (6) to the nearest emergency animal Veterinarian Doctor. (b) (6) was examined and given medications and fluids and released to our care. The charges for these services from the vet totaled \$332.76 which we paid by cash. Following the directions from the vet and administrating the medications prescribed, (b) (6) has recovered to nearly her old self by Tuesday evening. She has not and will not be given more of this product.</p> <p>I personally examined this product closely following this incident and I find it extremely dry, brittle and easily breaking into sharp edged pieces. Due to the grain of the meat some broken or fractured pieces splinter off resembling long thin fish bones. This product also does not hydrate or become softened by water or saliva easily. I think consumption of this product could amount to a kind of Russian Roulette to animals as is demonstrated in this instance.</p>	4	Years	Other Canine/dog	Dog	70	Pound
<a href="#">EON-342997</a>	12/1/2017 17:48	Purina ONE	Our dogs were fine until they ate the new dog food. First one threw up the next day the other threw up. <a href="#">EON-342972</a>	12/1/2017 9:16	Pork Bone Treat	She was given a Port Bone Treat purchased at (b) (6) Job lot, the label didn't really have a brand but it did say made in Canada. She had severe GI issues. She first started off very tired and lethargic. The next morning she couldn't lay comfortably without shaking. She had lameness in her front leg as well. We took her to the vet who thought she had a tick borne virus based on her symptoms. She then ended up testing negative for that and finally vomited a day later and has been feeling much better since she did.	5	Years	Great Dane	Dog	126	Pound
<a href="#">EON-342948</a>	11/30/2017 22:24	Bone	. On Wednesday we realized our dog was acting strange. He has been house trained since he was a few weeks old. He is now 6 years old and we saw that he had gone to the bathroom and threw up all over the house. We could not understand why he had done this. He was whimpering and seemed to be uncomfortable. We took him outside to go to the bathroom and realized that his stomach was very very hard. He also looked bloated from behind. Immediately we took him to the animal emergency room and they rushed him into emergency surgery. They came to the outcome that his stomach and intestines were distended to about 4 times the size his stomach should have been. He had to stay in the hospital for 2 nights as of today. We then realized we had given him a bone treat the other day (sunday). We read that other dogs have been getting sick and dying from those bones. We were told that our dog may not have made it through surgery because most dogs do not according to the surgeon, but were lucky enough that he made it out. He is stable and in recovery now.	6	Years	Retriever - Labrador	Dog	65	Pound
<a href="#">EON-342947</a>	11/30/2017 21:48	Merrick Purrfect Bistro Grain Free Chicken Pate	Opened can to find dead fly in the cat food. I have noticed a significant decline in quality control of Merrick Purrfect Bistro Chicken Pate 5.5oz cat food throughout 2017. Purchased case of food through Amazon. Cat was admitted to a veterinary clinic for vomiting two weeks ago without any other indication of illness. Cat ate food from the same case as the dead fly. No way to know if the food caused vomiting, but now it's quite the coincidence based on this finding. I thought this warranted a report and hopefully leads to an inspection of Merrick's production facility.						
<a href="#">EON-342892</a>	11/30/2017 19:28	Dentley's Nature's Chews Natural Flavor Pork Femur Bones	(b) (6) had a pork femur bone and within 12 hours of having partially consumed it he became terribly ill. He progressively got worse over the course of the next week and a half. I had taken him to the vet twice where the second time through they kept him for 24 hours to hydrate with IV fluids, run tests and observe him. I truly felt like I was watching him die right in front of me and felt completely helpless. He was not eating, not drinking, running a fever and was very, very lethargic and listless.	6	Years	Retriever - Golden	Dog	77	Pound
<a href="#">EON-342889</a>	11/30/2017 19:04	Taste of the Wild Sierra Mountain Canine Formula with Roasted Lamb	I bought a new bag of Taste of the Wild food, a brand which I've used for years, and shortly after opening it and feeding it to my dog his paws swelled up. <a href="#">EON-342888</a>	11/30/2017 18:56	Taste of the Wild Sierra Mountain Canine Formula with Roasted Lamb	I bought a new bag of Taste of the Wild brand food, Sierra Mountain/lamb flavor. Shortly after opening the bag and eating the food for dinner, my dog's face and paws completely swelled up. We had to give him bendryl to decrease the swelling and monitor him throughout the night in case the swelling spread and his throat closed. He was very itchy and uncomfortable. By morning his swelling had decreased, and it was almost gone by late afternoon the next day. My dog has no food or environmental allergies. Introducing this new bag of Taste of the Wild brand food was the only new/different thing to his daily routine. Since this has happened, I have talked to three other friends that had this same exact experience these past 2 weeks that have opened a new bag of lamb flavored Taste of the Wild brand food and their dog's face swelled up, and they became itchy and lethargic.	3	Years	Mixed (Dog)	Dog	70	Pound

<a href="#">EON-342766</a>	11/30/2017 14:08	Exer-Hides Rawhide Bones	On the (b) (6) at 4:30pm I took (b) (6) to the vets for a weight check and at that time they told me (b) (6) weighted 42 pounds and was a very healthy dog. Then I went to Walmart to do a little bit of shopping and I picked (b) (6) up an exer-hide rawhide dog bone. At 6:30pm I gave (b) (6) his dog treat. About 15 minutes later he started vomiting. By the (b) (6) he could not walk. I took him into the vets again on the (b) (6) they wanted to keep him over night on IV fluids. I talked to the vet that night and they said he looked like he was doing a little bit better. Then on the (b) (6) I get the phone call from my vet saying when they came in that morning and my found (b) (6) dead. That he passed away sometime over night. They are planing on doing an autopsy on the (b) (6). They are 100% sure that the rawhide dog bone is the cause in (b) (6) death.	4	Months	Saint Bernard Dog	Dog	42	Pound
<a href="#">EON-342764</a>	11/30/2017 14:00	Butcher's Bones Ham Bone	Since (b) (6) is an active young puppy and is definety in the chewing stage and since he had become board with his kong and other chew toys we purchased a Butcher's Boones Ham Bone from Pet Supplies Plus on a Wednesday gave it to him on Thursday, Friday at 4pm he went to the vet for a routine visit while there he aspirated and coughed so hard that he through up blood clots from his lungs. Was rushed to to an Emergency service where he spent the next 24 hrs in oxygen and multiple test upwards of \$2000.00 the only thing different in his life at the time was the ham bone.	17	Weeks	Boxer (German Boxer)	Dog	30	Pound
<a href="#">EON-342745</a>	11/30/2017 13:40	WholeHearted Grain-Free Chicken Recipe Flaked in Gravy	Fed this new food for 4 days (the kittens LOVE IT!!!), but the litter of foster kittens presented with very dark green, thick and sticky bowel movements. I have seen this reaction from excessive iron from a liquid vitamin supplement in other foster kitten litters. The kittens were exclusively eating this wet food and a mix of dry kibble from a large batch that a dozen other kittens had eaten recently without incident. I'm confident this canned food had way too much iron. Within 3 meals of feeding a different canned food, their bowel movements have improved in color and consistency.	6	Weeks	Domestic Mediumhair	Cat	1.5	Pound

<a href="#">EON-342733</a>	11/30/2017 13:24	Nylabone	<p>Pet was throwing up for about two months prior to us being extremely alarmed. Vet stated that it was common in frenchies to throw up in the mornings or night if their stomachs are empty and they are hungry. (b) (6) had no issues with eating. He would normally eat 2 meals a day. Sunday November 05 2017 he was lethargic and unable and uninterested in eating his meal. He then began throwing up several times a white foam. We immediately took him to our first animal hospital (b) (6) Veterinary Emergency Clinic) due to our vet (b) (6) Animal Hospital) being closed on the weekends. They did not perform an X-ray and was sent home with acid reflux medication and nausea medication. By November 6th 2017 (Monday). He was rapidly getting worse so we then rushed him to our vet where they performed blood work and an X-ray. They saw something in his stomach and notified us that we needed to go to another animal hospital to have it removed. On the night of November 6th 2017 we went to (b) (6) Veterinary Medical Center. They performed more X-rays along with a sonogram. They found that not only did he have something stuck in his stomach but also in his small intestine. They believe the object in the small intestine would pass due to how far along it had gotten in the digestive track and so we opted to have him put under and scoped to get the object out of his stomach. The vets finding were that it was a bitten off end of a Nyla Bone. Due to the throwing up he was also suffering from ulcers and esophagitis. (b) (6) then spent 2 days recovering from that procedure in the Veterinary ICU by Wednesday November 8th they still were unsure of the object moving in his small intestine and after many questions to the veterinarians and countless hours on trying to determine if they could cause large issues not removing they decided to go ahead and perform a second surgery on his (b) (6) had to have his whole stomach opened that day where the incision went from his ribcage down to by his legs. While the surgeon was in there removing the object he ran into complications. His small intestine was punctured and the other part of his small intestine was severely bruised. Not only did he have Peritonitis but they were forced remove part of his intestine due to it completely falling apart. They were hopeful the severely bruised section would heal itself after much needed antibiotics. He had 21 Staples in his stomach along with internal stiches. They found the other part of the Nyla bone in his small intestine and were shocked it was able to move that far. BOTH ends completely blackened due to acid. (b) (6) finally was able to be discharged and come home on November 10th 2017. He was on over 5 medications in an effort to heal his body and we had to return two weeks later to the hospital to have his staples removed on November 20th 2017</p> <p>All vet document and itemized vet bills available if needed.</p>	2	Years	Bulldog - French	Dog	23	Pound

<a href="#">EON-342732</a>	11/30/2017 12:00	Vital Essentials Raw Bar Freeze-Dried Turkey Wings	<p>My dog, (b) (6), ate two Vital Essential Raw Freeze Dried Turkey Wing dog treats around noon on Saturday, November 25. She became lethargic by Saturday afternoon. On Sunday she was vomiting and Sunday night devolved into violent vomiting. We went to the vet Monday and xrays showed bones stuck in her stomach, preventing her stomach from emptying into her intestines. She immediately had emergency surgery that day and her prognosis could not be given until after the doctors opened her up to empty her stomach and assess the possible tissue damage. Thankfully, there was minimal damage, as we caught the issue relatively quickly. However, my once active, healthy, and happy dog is now confined to no jumping, running, or using stairs and needs to be kept in a crate with a cone on while unsupervised for the next two weeks. She is on 5 different medications and requires 4-6 small meals/day. We are not out of the woods regarding complications either. there is still a chance for infection, incision issues, and myriad of other possible complications as a result of this major surgery.</p> <p>I purchased these treats from a pet supply store in (b) (6) and on Monday (the day of her surgery) I spoke with the store manager and advised them to remove these from their shelves - they have been very helpful. I called Vital Essentials on Monday as well and (b) (6) in customer service advised me that she would pass my information on to a man (I cant remember his name, (b) (6) maybe?) in quality assurance and he would get back to me within a day. When I hadn't heard back from anyone by Wednesday, I called again and asked for quality assurance and, again, (b) (6) told me I needed to speak to her first. I explained I did on Monday and was told I would get a call back and no one did so she assured me someone would be calling me back that day on Wednesday. Today is Thursday and I have not heard back from them. (b) (6) is in so much pain and I am in pain watching her. I trusted these treats would be a nice surprise for her and it almost killed her. We have paid \$2,306.12 so far in vet bills for this. These treats come in a bulk-style serving manner - no packaging to contain any warnings, directions, advisements... nothing. Vital Essentials nearly killed my dog and they are dodging me.</p>	9	Years	Terrier (unspecified)	Dog	24	Pound
<a href="#">EON-342721</a>	11/30/2017 1:16	Pedigree Adult Complete Nutrition Roasted Chicken Rice & Vegetable Flavor	<p>After giving my dog pedigree adult complete nutrition food, I noticed him throwing up after. He has ate this food for a couple of years so I started giving him less portions because I thought maybe he was eating too much. A couple days ago, I noticed something shiny in his food and it was a little metal fragment.</p>						

<a href="#">EON-342720</a>	11/30/2017 0:04	Smokehouse Beef Rib Bone	We purchased rib-bone dog treats from (b) (6) located on (b) (6) and (b) (6). All three dogs were given one bone each. That evening there were no noticeable issues; they ate dinner, they drank water, they used the "bathroom" as normal. The next morning, still no problems; normal eating, drinking, and bathroom habits. The dogs stay in an indoor kennel every day while we are at work. That evening around 1630 my husband arrived home to a huge mess in the kennel. One or all of the dogs either vomited, had diarrhea, or both. It was sprayed across the wall and the dogs were all huddled near the door of the kennel to avoid the mess. Our entire home smelled vile; it was a sour smell like I have never experienced in our life. Despite this, all three of the dogs remain in fine health and have not had any more upsets. This was an adverse event and I did not even think of the bones being the issue until the recent reports have made their rounds. It has been over a week and luckily the dogs are still 100% normal in all eating, drinking, and bathroom habits. Had we realized it was the bones and/or had they showed any symptoms, we would have rushed them to the vet.	10	Years	Beagle	Dog	25	Pound
<a href="#">EON-342715</a>	11/29/2017 23:08	Ham Bone	I purchased a HAM BONES VACUUM from Winn Dixie for \$4.99 on 11/21/2017. I gave it to my dog on 11/26/2017 Sunday. I heard the reports on the news from FDA today 11/29/2017. I walk my dog every morning and she usually has a bowel movement but noticed she hadn't had one for the past two days. I check in my yard tonight and found one which was like diarrhea which is unusual for her. She has seemed lethargic for the past few days.	11	Years	American Pit Bull Terrier	Dog	95	Pound
<a href="#">EON-342713</a>	11/29/2017 21:48	Country Kitchen Serrano Ham Bone	I gave my dog a ham bone that I purchased at the grocery store and within a matter of 2 days he had blockage and could not go to the bathroom which I ended up finding out at the emergency vet the very next day he had stopped eating and drinking later on that night he acted like he had more energy and he wanted to get up and move around again he drank a little bit of water the very next morning his eyes were yellowing I took him back to the vet to get reevaluated come to find out his liver was already shut down and his kidneys were shutting down so I had to put my two-year-old puppy to sleep I had to give him euthanized because he had full blockage and there was no way to save him	2	Years	Pit Bull	Dog	65	Pound

<a href="#">EON-342709</a>	11/29/2017 20:40	Redbarn Peanut Butter Flavor Filled Bone	We purchase peanut butter filled real bones for our standard poodle from Pet World (b) (6) on a regular basis. My son bought one for our dog at the end of October. The wrapping seemed different, so I thought the store might have changed vendors, but they claim that they didn't. After getting the bone, we noticed our dog getting a swollen fluid filled bump on the area next to the inside of his eye. We didn't associate it with the bone. It appeared, then disappeared, went from one eye to the other. We even took our dog to a eye specialist on November 1, 2017. The doctor had no idea what it was and said he had never seen anything like it. Was it a reaction or allergy? Then, on November 2, 2017, our dog started vomiting. At first, he still acted hungry, but then stopped eating and had a little diarrhea. When he was lying in bed that evening, he burped up a 50 cent piece size of blood. He started straining to go to the bathroom, and only blood would drip out. We took him to the vet, where he got fluid injected under his skin, blood tests, x-rays, and four different medications. It took him a week to recover, and then he still wasn't back up to his weight. I'm still worried about him. We started talking about what could have caused this to happen. The only thing that came up was the bone. Then, we saw the news reports. Everything else was the same...food, water, milk bones. Did something change at the plant? Did they change a supplier? Is there a connection? I still have the bone. I really feel that he could have died. He was so sick.	6	Years	Poodle - Standard	Dog	54	Pound
<a href="#">EON-342708</a>	11/29/2017 20:40	Merrick Limited Ingredient Diet Grain Free + Potato Free Real Chicken Stew	We have been feeding both (b) (6) and (b) (6) Merrick Real Chicken Stew Limited Ingredient canned food for the past couple of years and about 2 weeks ago, we started a new batch of canned food and both started having really bad bloody diarrhea. We weren't sure at the time what was causing them to be sick so we stopped giving them treats (also by Merrick). We also put them on a bland diet (boiled chicken and rice) for a week and their symptoms were improving. So this past Sunday, we started mixing in some of their Merrick food with the bland diet. We were awoken in the middle of the night with both dogs pooping bloody diarrhea again all over our bedroom, bathroom, including our bed and it went on all night. We took them to the vet first thing Monday morning and they were given antibiotics and two other medications. The girls are both doing better now.  We still have two and a half batches of the Merrick food left that we will be taking back to PetCo.	10	Years	Shih Tzu	Dog	16	Pound

<a href="#">EON-342692</a>	11/29/2017 18:08	Dentley's Nature's Chews Natural Flavor Pork Femur Bones	<p>On Black Friday, I purchased a new Dentley's Nature's Chews Pork Femur Bone for my dog. It was on sale and I immediately snatched up two of them for a treat for our beloved family pooch. That evening, Midnight was awarded one of the bones, which he excitedly began to gnaw and chew on. He had finished it off by the next afternoon, which was Saturday. Throughout that evening, he slept and laid around. When I awoke the next morning, Sunday, I found that he had vomited several times throughout the night. He was adamant about needing to go outside immediately, where he vomited some more, and found the few blades of fresh grass to eat to help calm his stomach. Unfortunately, this was not the end of his vomiting bout and the grass did not help. He vomited several more times throughout the day, and on Sunday evening, we knew something was wrong. We did our best to keep him calm and comfortable that evening and called our Veterinay office the next morning, Monday. We rushed him to the office, and he was immediately examined and attached to an IV for fluids. He had become extremely dehydrated and it was clear that he was very sick. After a round of X-Rays, fluids, strong antibiotic injections, and more prods from the Veterinarian and her staff, Midnight was allowed to come home and put on a strict bland, low-fat diet. While the Veterinary team did what they could to help Midnight, no conclusive diagnosis could be determined. After sleeping all night Monday, and laying around much of the day Tuesday, he has begun to perk up on Wednesday. He continues to act tired and lazy, but I hope he is on the mend. He has been much more alert, and seems to be feeling better.</p>			Retriever - Labrador	Dog		
<a href="#">EON-342689</a>	11/29/2017 17:48	Purina Busy Bone Tiny	<p>I have been giving my dogs "My Bones treats for over a year, not knowing that it's not safe to give them such treats. I fed them as usually I in the morning but on Saturdays I give them their bone treats, after a few hours I notice that my little dog had threw up his meal. I though she ate too much and that was why she got sick. She likes to sleep a lot so I didn't notice a big change in her daily routine until the next day when she didn't want to eat. I work out of my home so I was not able to take her to the vet until that evening. When I got there she was barely walking, a few minutes later the Dr. came to the room to tell that she was dying. She said that my dog had an infection in her stomach and the x rays showed a white mass in her stomach. I was devastated my baby just died. I have to mention that she threw up white foamy liquid a day before also. The next day While watching the news I learned that many dogs have gotten sick or died from bones treats. I am hart broken.</p>	12	Years	Dachshund - Miniature	Dog	10	Pound

<a href="#">EON-342688</a>	11/29/2017 17:48	Grillerz Pork Femur	Our 2 puppies came down sick 4 days apart. We had chosen our puppies and put a deposit on them over a month before they were old enough to come home. During the month that followed, we spent dozens of hours puppy-proofing our home and yard. We eradicated any questionable plants and moved everything up above puppy reach. On Tuesday, November 14th we took the pups to the vet for a regular check-up and their 2nd set of vaccines. They were also checked for worms. Both pups received a clean bill of health. Fast forward 6 days to Monday, November 20th. (b) (6) began vomiting and became extremely lethargic between bouts of diarrhea in the early morning hours and became much more ill as the day progressed. By 4pm, she was in the vets office for anti-nausea injections and fluids. For the next 24 hours she was gravely ill. After 4 days she returned to about 85% of her normal activity. On Friday of the same week, her brother became ill with the same symptoms. This resulted in another emergency trip to the vet, although this one was on a holiday. After a CBC & chem panel for both dogs, the 2 vets have ruled out any environmental contamination. The Grillerz Pork Femur was the only new addition to their environment, food treat or toy routine. After much research and consideration, we are confident that these bones are the source of the gastrointestinal issues our pups have faced.	11	Weeks	Cattle Dog - Australian (blue heeler, red heeler, Queensland cattedog)	Dog	12	Pound
<a href="#">EON-342687</a>	11/29/2017 17:40	Pet Pride Natural Smokey Ribeye Bone for Dogs	I gave my German Shepherd a meaty dog bone I bought from the local grocery store on a Friday night. By Saturday night he threw up several times and by Sunday afternoon he was dead. This happened the weekend before (b) (6) of this year. Last night I became aware of the FDA warning on these bones and realized that it was more than likely the cause of his death since he had no other health issues other than his age. It took 48 hours between eating the bone and his death. I couldn't afford an autopsy from the vet to determine the cause, so I've been racked with trying to figure out why until last night when I read your warning about these bones.	9	Years	Shepherd Dog - German	Dog	150	Pound

<a href="#">EON-342627</a>	11/29/2017 14:36	Nylabone	Annie liked to chew and had gone through several chew toys. So, a friend suggested a Nylabone. I purchased a Nylabone and gave it to (b) (6). She worked the chew toy down pretty quickly, so I took it away from her. Later in the day, she had an accident on the carpet. It was just urine, but it was really out of the ordinary for that to happen. Awhile later, (b) (6) started to vomit. So, we put her in her kennel and kept an eye on her. I thought taking her food and water away until her stomach calmed down would help. She still had a lot of energy, since she was just 18 months, but didn't realize that pieces of the Nylabone had broken off and were in her digestive tract. I assume she was internally bleeding, but didn't realize it yet. Later, in the evening, we put her to bed. She seemed okay. A little after midnight I heard her calling for me and I figured she needed to relieve herself outside. When I got to her kennel and turned the lights on, I knew she was dying. Her face was growing stiff and she was trying everything she could to hang on. I was (b) (6) at the time, so my husband got her in our car and rushed her to the Vetrinarian ER. That was the last time I saw her. They had to put her down immediately. It was horrific what she went through. It was traumatizing for me. I hate that I ever bought a Nylabone. I've never reported it until now. I hate that product.	18	Months	Retriever - Golden	Dog	70	Pound
<a href="#">EON-342621</a>	11/29/2017 14:28	Healthy Hide Good 'n' Fun Flavored Rawhide Bones	"Good and Fun" Brand flavored rawhide bones were tainted with Sanitizer during production (in (b) (6) My Pit Bull loved these bones and could fully consume (an approximate 8" bone) in nine minutes. I used to give him these as a special treat (training aid) about once per week. He started vomiting up all of his food along and dry-heaving after his stomach was empty. I received a notice from place of purchase (Wegman's Grocery Store) that the Columbian manufacturer had mixed a "sanitizer" into the bones and that they were pulling the bones from their shelves. I noticed, however, that other retailers were still stocking & selling this product. These Columbian bat rastards almost killed my dog!!!	4	Years	Pit Bull	Dog	99	Pound

<a href="#">EON-342613</a>	11/29/2017 13:44	Primal Pet Foods Raw Recreational Beef Marrow Bones - Small	<p>My dog chewed on the "Primal Pet Foods Inc." "RAW RECREATIONAL BEEF MARROW BONES - SMALL (1 PAK)" for 20-25 minutes on Saturday 11/25/17 between 2:30 and 3 pm. He had not had ANY new/different foods in the days leading up to this. His regular meals are two cups of FROMM Salmon kibble twice a day and dehydrated sweet potato treats- nothing else.</p> <p>The same night (Saturday, 11/25) he got terrible diarrhea (around 8:30/ 9 pm). He was throwing up and having diarrhea most of the night, all the next day (11/26, Sunday), and part of Monday, 11/27.</p> <p>He did not eat or drink anything for a full 36 hours after chewing on this bone.</p> <p>He had diarrhea and was throwing up for over 36 hours after eating this bone (from Saturday night until Monday mid-day).</p> <p>I had to rush him to the vet on Monday, 11/27 at 9 am.</p> <p>They believe he is suffering from pancreatitis induced by something he ate. Again, he ate nothing new except for this bone- so it had to be this bone.</p> <p>The vet gave him some subcutaneous fluids (for dehydration), maropitant (cerenia) for the nausea (it only lasts 24 hours), and PD i/d Low Fat GI Restore canned food to get him eating again.</p> <p>Around noon on Monday 11/27 around noon he started slowly eating the prescription food he was given. He ate pretty well most of Monday. He did not vomit.</p> <p>However, once the maropitant (cerenia) for the nausea wore off on Monday night/ Tuesday morning he stopped eating again. He has not eaten or drunk anything since Monday night. It is noon on Wednesday 11/29. That is over 36 hours. I have to take him to the vet again today for more of the above mentioned IVs so that he does not die due to dehydration.</p> <p>My dog, my child, is suffering because I trusted this brand, and the pet store that sold it to me. Now my dog's health declining in front of me and there is nothing I can do about it except hope that the vet can help him.</p>	1	Years	Terrier - Airedale	Dog	65	Pound
<a href="#">EON-342607</a>	11/29/2017 12:04	Royal Canin Bulldog Adult	<p>Our dog simultaneously suffered diarrhea, very red irritated eyes, "staining" on his neck and front legs, lethargy. This all began when we started feeding him a bag of Royal Canin Bulldog food. He has been fed this his whole life with no problems until this bag. He had been seen by a Vet 4 times. No explanation could be given for his symptoms. This went on for 6-7 weeks, all this time, being fed from the same bag of food. Finally one Vet recommended putting him on a prescription intestinal food. Within 3 days of stopping his RC Bulldog food, all of his symptoms completely went away. He was not on any other medications other than the prescription food.</p>	5	Years	Bulldog	Dog	65	Pound

<a href="#">EON-342603</a>	11/29/2017 10:24	Purina Busy Rollhide	A couple hours after giving each of my mini schnauzers, (b) (6) & (b) (6) a PURINA BUSY ROLLHIDE (b) (6) began to vomit. He kept throwing up over & over again & chocking. He threw up white chunks then his vomit became like mucumbut yellow. Shortly after that (b) (6) began to vomit. He too became very ill throwing up over & over again. He also threw up big white pieces then the vomit was pure yellow. It finally quit. (b) (6) then laid down and began to jerk off & on. I asked my husband if I should call the ER Vet because it was at night. He said if (b) (6) did t get better soon. After about 30 mins he seemed to do better. Neither dog ate that evening nor drank water. It really scared me because we used to have 2 other mini schnauzers that got sick & nearly died from some treats that were recalled years ago & they got diabetes right after that & nearly died. I don't understand why this keeps happening. Please help.	1	Hours	Schnauzer - Miniature	Dog	17	Pound
<a href="#">EON-342588</a>	11/29/2017 9:08	Redbarn Naturals Bargain Bag Tasty Treat	We bought a variety bag of Red Barn dog treats. The bone looked to be some sort of joint (a knee, maybe) covered in a yellowed seasoning. It all smells awful, like most dog treats, so we weren't opposed to giving it to the dog. However, about 20 minutes into insessent gnawing he had to go outside and his feces was NEON yellow. In the following days his bowel movements continued to feature this yellow color and he vomited yellow flegm. We promptly took the bone away after the first neon dropping. This continued for 2 days and the hacking stopped after 3.	9	Years	Mixed (Dog)	Dog	165	Pound
<a href="#">EON-342579</a>	11/29/2017 2:40	Unknown Brand Lamb Rib	I was at a high end pet food store buying a that for my dog. They told me about the latest item being a 'lamb rib'. I was appalled and commented that I don't give a 12lb dog any kind of bones. I was reassured that it was not a bone. The lamb rib 'is condensed lamb meat to look like a bone. And if there are any bones in it they are very small and treated to dissolve quickly". So I bought one. I gave it to my dog at 3pm on a Friday and by 6 pm she was listless. Took her to the vet and the X-rays showed her complete GI tract filled with pieces of bone. Rushed her to the emergency vet where they had to perform an endoscopy to remove multiple 1-inch fragments of bone from her esophagus. Unfortunately there was so much damage done to her esophagus that it ultimately ruptured and lead to the death of my sweet dog. I reported this immediately to the store that sold the item to me and there only response was that they had never heard of such a thing happening. I also reported it to the distributor who gave me the same response. I have not been in that pet food store since. I did not know these situations for pet food and treats could be reported to the FDA, but I recently saw an article in the news about how 15 dogs have died from these bone treats and want to let you know that other dogs have died.	12	Years	Dachshund - Miniature	Dog	12	Pound

<a href="#">EON-342540</a>	11/28/2017 16:52	Pur Luv Mini Bones Peanut Butter Flavor	My dog has puked twice over the course of 48 hours since ingesting this product. Chunks of the product have been coming up each time she has puked, indicating that this product is not digesting. She is not willing to eat much and I fear that there are still chunks trapped inside which will remain undigested and harm her digestive track. I have heard other reports of dogs getting sick and some dying so I remain very fearful and concerned. I have called my vet to advise them of the situation.	1	Years	Poodle - Miniature	Dog	10	Pound
<a href="#">EON-342509</a>	11/28/2017 14:16	Harvest Valley Farms Pork Femur	She swallowed some of the pork femur bone that splintered. There was some initial blockage but eventually passed through. However, she had to have emergency surgery because the vets thought there was still blockage. Once they had her open they found there was Severe damage done to the lining of her stomach, intestines and is still very infected. We are now on week 4. She's lost almost 15 lbs since this started. She is still under veterinary care and will be for at least another 2 weeks. I feel that these types of bones should not be allowed to be sold.	1	Years	Mixed (Dog)	Dog	30	Pound

<a href="#">EON-342503</a>	11/28/2017 12:32	Dynamic Pet Products Real Ham Bone	On a Saturday evening, I gave my boxer a Dynamic Pet Products Real Ham Bone that was purchased at the Wal-Mart in (b) (6). This was around 3:00 p.m. By 6:00 p.m., she was pacing and drinking an excessive amount of water, while continuously licking her chops. The following day, she was very lethargic and refused food. She continued to drink an excessive amount of water, but was vomiting it up. Around 8:00, this progressed to bloody vomit and bloody diarrhea throughout the night. She was taken into emergency surgery the following morning (Monday) at (b) (6) Animal Hospital in (b) (6). The Real Ham Bone caused an intestinal obstruction. Without surgery, she would have died (b) (6) was supervised while she was chewing on this product.	4	Years	Boxer (German Boxer)	Dog	75	Pound
<a href="#">EON-342501</a>	11/28/2017 12:16	Milk-Bone Flavor Snacks Biscuits - Small/Medium	Purchased a new box of Milk Bone Treats from Amazon. This was my second purchase of this product from Amazon. Both dogs have been eating Milk Bone Treats for their entire life, 5 yrs and 7 years. After about 48 hours of opening the new box and giving them the treats both dogs started vomiting. The German Shepherd started vomiting blood and then within two hours was passing blood and clots in his stool to hemorrhaging blood from his bowels. We rushed him to the ER vet and they put him on an IV, gave two shots and an RX. He was on RX food for 3 days. He has made a full recovery. The Chihuahua could not keep food down for 4 days and had to be fed a diet of boiled chicken and rice. He is still recovering. Upon further inspection of the treats we noticed they were full of black bugs. We threw the entire box away.	5	Years	Shepherd Dog - German	Dog	100	Pound

<a href="#">EON-342448</a>	11/27/2017 12:40	Friskies Savory Shreds with Ocean Whitefish & Tuna in Sauce	I've had my cat, (b) (6) for 15 years. In those 15 years, I've purchased mainly Friskies brand cat food; the wet food in cans. I've never had a problem, and she seems to really enjoy it. Her favorite is the Whiteocean Tuna, in shreds. Recently, I've noticed two things: the cans look different, very generic, with bland yellow labels that look similar to the other brands, and my cat doesn't have the same liking to the food. Personally, I've noticed the cat food doesn't have the same smell like it used to. I fear that the formula has changed, and not for the better. My cat hardly touches it, instead, going for the hard cat food (Purina brand) and water afterwards. She is also noticeably weaker and rests more. The latter might not be out of the ordinary for a cat her age, but the fact that she's not eating the same is worrisome.						

<a href="#">EON-342417</a>	11/26/2017 23:48	Pure Balance Chicken & Brown Rice Recipe	Two weeks ago, our dog threw up during the night. We found vomit in multiple locations in his sleep area. His food kibble could clearly be seen in the vomit. His food was undigested and had not been broken down by stomach acid. The next four to five days, he ate his food sparingly, but did not vomit. Then last week he started having hard hacking attacks like he was trying to throw up. The only thing that would come out was white mucus like spittle. We began feeding him cheerios only and the episodes stopped. We re-introduced one serving of Pure Balance Chicken and Brown Rice and the attacks returned.	11	Years	Terrier - Yorkshire	Dog	13	Pound

<a href="#">EON-342316</a>	11/23/2017 13:52	Dogswell Vitality Chicken Breast Jerky	<p>In August, 2017 (b) (6) suddenly started vomiting frequently (daily), had very loose stools, and diminished appetite. On 8/3/17 we took (b) (6) to our veterinarian. The vet was prescribed Sucralfate tablets. No changes were made to our dog's diet. During the months of August and September the diarrhea persisted. A 2nd appointment was made with our vet for October 11, 2017. A fecal test was ordered. The fecal tested positive for Giardia. Vet prescribed Metronidazole and Panacure-C for nonspecific diarrhea disorders. There was no change to dog's diet. On 10/31/17 a 2nd fecal test was done. This once came back as "clear"/"negative for Giardia. However, the diarrhea persisted and vomiting persisted. In early November I suspected that there might be a link between the symptoms and the Dogswell Jerky based on the fact that I pieces of Jerky could be identified in the vomit. I stopped feeding (b) (6) the Jerky Treats on or about November 7. Within a day, all vomiting ceased and (b) (6) stools returned to "normal". I contacted Dogswell via an online submission to report suspected tainted jerky. The bags of the Dogswell Treats fed to (b) (6) has a Good To Date of 11-30-2018 and Shift 1B 1205. They were purchased through Amazon. We have some of the suspected tainted treats in our possession along with the bag/s from which they came. They were 24 oz bags. The listed ingredients are: chicken breast, vegetable glycerin, salt, chicken broth, vinegar, flaxseed oil, vitamin E and A supplement. NO grains, corn, wheat, soy, artificial colors, artificial flavors or preservatives.</p> <p>Since eliminating the Dogswell Chicken Jerky Treats from our dog's diet, her appetite has returned, she has zero incidents of vomiting, and her stools have returned to normal.</p>	9.5	Years	Spaniel - Springer English	Dog	51	Pound

<a href="#">EON-342096</a>	11/20/2017 8:24	Simple Trainers Real Turkey	We dumped some treats out onto a plate because they were small treats and hard to handle to give to our dogs. We were horrified when we noticed worms and webs had formed and were living on the treats.						

<a href="#">EON-342092</a>	11/20/2017 0:20	Freshpet Select Tender Chicken Recipe with Vegetables & Brown Rice	<p>(b) (6) had been eating Pet Fresh dog food for about 1 year. He ate it twice a day. We bought the dog food two rolls of the dog food from Walmart in (b) (6) on (b) (6). We started feeding him from this tube (b) (6). At first he was eating the food fine and it didn't appear to have any affect on him. Tuesday he ate in the morning but was no longer interested in any food. We began to notice him not really feeling well, seeming a little uncomfortable, and had to cut his insulin medication down to 5 units because he did not eat. He was continuously going outside in what we thought was a need to poop but was unable to. He was pretty lethargic Tuesday night. Wednesday morning he became very lethargic, laid around and was uninterested in everything. He was up and moving around quite a bit appearing to seem very uncomfortable and was just trying to find a position that he could lay in comfort. Seemed to have stomach cramps. He was very restless. We called the vet that morning to get him in but the soonest they could get him in was Thursday morning. Wednesday evening around 5:30 he began pooping blood. An hour later he started to throw up blood. He continued to do that and he seemed to lose the use of his back legs. Had a hard time breathing and died in our arms about 12:30 Wednesday night/Thursday morning.</p> <p>Because we were unaware of the potential dog food being the cause of (b) (6) death we continued to give this food to our other dogs.</p> <p>(b) (6) had been eating this dog food for the past few days along side (b) (6) and (b) (6).</p> <p>(b) (6) had been fine until Sunday 12th. She acted fine in the morning but later in the afternoon she seemed to get lethargic and didn't want to eat or drink anything. Seemed uncomfortable. She started to have diarrhea about 4 that afternoon. It continued to get more consistent throughout the evening and she seemed very uninterested in food, and water. About 8:00 that night she went out the back door and I followed her and noticed a very large pile of blood. I immediately took her to the vet. She was dehydrated and in pain. She pooped pure blood in the vets office and he was able to get a sample of her poop and look at it under the microscope. That is when he told me that he was suspicious of food poisoning. She was admitted into the hospital and spent two days there. She would not eat or drink. She came home and has been on Metronidazole. She appears to be making a full recovery.</p> <p>(b) (6) was displaying similar symptoms of lethargic, and not wanting to eat or drink. She didn't display any of the diarrhea but the doctor put her on the Metronidazole as a precaution.</p>	10	Years	Lhasa Apso	Dog	18	Pound

<a href="#">EON-342021</a>	11/18/2017 10:52	Orijen Original	We typically buy Orijen Dog Food for (b) (6) (No Grain). She has albinism so she can be sensitive to foods. Orijen is one of the few products she responds positively to. When she began eating this food (afternoon of 14/11/2017) we noticed lethargy setting in. The next day, when we took her out, she would only poop bloody diarrhea. We gave her more food that morning though a much smaller amount. After that the diarrhea got far worse: basically only blood. We stopped the food to see if that was causing the problem. She has gotten much better. As of this morning, her stool was not watery though there was still a little bit of blood present.	7	Years	Boxer (German Boxer)	Dog	65	Pound
<a href="#">EON-342003</a>	11/17/2017 20:12	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	I have been giving Taste of the Wild Bison and Venison to my puppy for the last couple of months. Since that time he has diarrhea on and off and had excessive eye discharge. His diarrhea and lethargy, however, has gotten worse in the last few weeks. His coat is no longer shiny and after many tests and medicine we have to the realization that it is the food causing his issues. I have since stopped the food.	7	Months	Retriever - Labrador	Dog	37	Pound
<a href="#">EON-341997</a>	11/17/2017 18:56	Evanger's Meat Lover's Medley with Rabbit	My cat (b) (6) died early this morning while under the care of an emergency vet. The emergency vet and his regular vet could not figure out why. They did tests, took blood a stool sample and all came back inconclusive. He was in excellent health but declined rapidly while under two different veterinarian's care. His symptoms correlate (in my opinion) with the symptoms of pentobarbital poisoning. His body temperature was below normal, he was dehydrated, off balance, confused and lethargic. The cat food I fed him, "Evangers", has a history of past recalls for pentobarbital contamination. I have a sample of the cat food that he was fed and the UPC code from the bag it came from. His blood is still at the lab and will be good for a few more days for testing. I do not know if you can test blood for the presence of pentobarbital or not. I wish I had thought of this correlation sooner so we could have tried another approach to save his life.	3	Years	Domestic Shorthair	Cat	11.5	Pound

<a href="#">EON-341860</a>	11/16/2017 15:08	Pedigree Chopped Ground Dinner with Chicken Beef & Liver	On 11/4 I went to open a can of pedigree dog food. When I started the can exploded in my hand and the food started to expand and foam out. The smell was awful. I had just purchased this can from Wal-Mart the week before and it showed no damage. I have video of the food foaming if you need it. I contacted pedigree and they said sorry we will send you coupons. I don't want there product ever again. We need to find out what they are feeding our pets.						
<a href="#">EON-341840</a>	11/16/2017 13:08	Castor & Pollux Organix Grain Free Lamb & Peas Recipe	I opened a new 22# bag of Organix Grain Free lamb and peas recipe, and scooped out some food and put it in my dog's bowl. She began to eat it. I went to get another scoop and when I looked inside, I saw a clump of whitish ?food? and pulled it out. It was attached to a brown sticky clump that appeared to be (and smelled like) dried dog feces. I then went to my dog's bowl and she had already eaten some of the food. I took her bowl away and discarded the remaining food. That evening she developed diarrhea in the house, which she never does. She had previously been healthy without G.I. problems. I attribute this to the contaminated food.  I contacted company (Castor Pollux), which was going to check to see if they would reimburse me for all expenses associated with returning the dog food to them. They never got back with me as promised.	12	Years	Shepherd Dog - Australian	Dog	45	Pound

<a href="#">EON-341806</a>	11/15/2017 19:48	Nature's Domain Beef Meal & Sweet Potato	I purchased a 35lb bag of Kirkland Nature's Domain food from Costco sometime last week. When I fed it to our Boxer (b) (6) he became very sick with vomiting, foaming out of the mouth and some very loose stool, his behavior became very lethargic and was refusing to drink water or eat, when he drank a bit of water within a few minutes he would again stat vomiting. (b) (6) had to be taken to the Vet on Tuesday morning as he was very weak, throwing up and with some shakes. upon arrival to our veterinarian's office they conducted various GI exams and some x-rays, the veterinarian didn't find anything lodged in his digestive track which is what we feared, but did state that something he ate had made him very sick. As we backtracked every step of the prior days we noticed that he had only been eating the Kirklands pet food, I went online and decided to do some research and found various reports on Consumer Affairs, Dog advisor and a few other sites that described the exact same thing that happened to (b) (6) occuring to other dogs withing the same month and days apart. I contacted Costco who basically placed blame on the manufacturer right away and forwarded the info to them. On 11/15/2017 I received a call from a representative at the manufacturer requesting information on the incident and our pet vets information, i questions her on testing and safety of their product and she asked me to send them the information from the SKU ( which I did)	7	Years	Boxer (German Boxer)	Dog	90	Pound
<a href="#">EON-341804</a>	11/15/2017 19:36	Ol' Roy Variety Pack - Filet Mignon Flavor in Savory Juices Porterhouse Flavor in Savory Juices	My family and I bought the Ol Roy 12 pack of dog food. I opened one of the plastic containers and the smell nearly made all my family and myself throw up. You could see worms moving around in it, the color was beyond words gross and I nearly fed this to my dog. The smell traveled throughout my apartment and I cannot get the scent of death as that's what it smells like out of my house. This is NASTY.						

<a href="#">EON-341714</a>	11/14/2017 17:04	Blue Buffalo Blue Basics Indoor Turkey & Potato Entree	<p>For years now I have noticed my 2 cats (one in particular) occasionally running from their food dishes mid meal. I assumed the reaction was teeth sensitivity, since I typically mix wet with dry food. I figured maybe the soft food was too cold, or the dry kibble hit a gum. Anyway... a couple months ago I decided to inspect the cat foods more closely to see if there was another possible culprit. Upon closer inspection I saw white fragments that I had seen before, though I had always assumed prior that these were just soft egg shell fragments. When I felt these fragments with my fingers they did not crumble like an egg shell, but instead were sharp and hard enough to puncture a gum, or even worse a stomach lining or intestinal wall.</p> <p>I began sifting through more food from additional cans and was finding multiple bone pieces. Pretty much every can I opened had dangerously large bone pieces. Over a couple months time I collected dozens and dozens of hard bone fragments, many over a 1/4" in size, and some a 1/2" wide with pointy sharp ends that would easily cause pain when eating, or damage.</p> <p>I called Blue Buffalo regarding this (after first discovering the bone fragments), and they played dumb and mentioned that this was new news to them, and they said they would mail me a container so I could send them back some samples. They showed no urgency and have never contacted me back since I mailed them the sample and a letter explaining my distaste for their actions.</p> <p>These large bone fragments were not isolated to one can of food, but instead were found in dozens of cans, and are still found in new cans that can be purchased today. It has now been many weeks since I informed Blue Buffalo of this, yet they have not issued any recalls and not asked me for more further information. I find this quite sad that there is either no quality control team at this company, or they simply don't give a damn that they are endangering thousands of cats around the world, unknowing to pet owners, some of who may have experienced health related issues with their cats (or even death). If they did care, they would have looked into this and issued a recall. My</p>						
----------------------------	------------------	--	---	--	--	--	--	--	--

			<p>cat has experiencing digestive issues for years. I now wonder if these bones have been the culprit all along.</p> <p>I wasted dozens of hours of my own time, hand sifting through dozens of cans of this cat food, just so that I could have enough samples to readily supply to Blue Buffalo as evidence, as well as to the FDA and anyone else who needs this. Blue Buffalo knows fully well that it's not wise to switch a cat's food immediately. It's also not easy doing this, as cat's are very finicky. If Blue Buffalo was an honorable company, they wouldn't have allowed these bones to be in their food in the first place. So it doesn't surprise me that they haven't issued a recall, haven't followed up with me, haven't offered me any de-boned food for my cats, etc.</p> <p>The reason I am issuing this statement to the FDA is because I want an investigation into this company, as they are obviously negligent and irresponsible, and I want an immediate recall to be made with the food product mentioned. I can send bone fragment samples, and provide any further info you may require. Thank you.</p> <p>p.s. It asked for a specific date below. I don't know the date this all started, or even a specific date when I first noticed the bones. I just know I contacted the company soon after discovered the problem. I've waited some time to contact the FDA because I wanted to collect enough samples just in case I needed extras if some were lost in the mail, or if Blue Buffalo decided to destroy the samples I sent to them. I am also very sick with a health condition and it's difficult finding the time or energy to deal with all of this. I would like a followup however, and hope to be informed regarding the status of how this plays out.</p>						
<a href="#">EON-341712</a>	11/14/2017 16:12	Merrick Limited Ingredient Diet Grain Free Real Turkey Recipe	We found a large sharp arrow shaped bone in our dogs food bowl. It was in a Merrick Limited Edition Real Turkey can #16 187 CL 3 39003 1757. The man. rep. asked me to send them the bone, but I hesitate because I believe safety measures should be taken. If eaten my Yorkie and Morkie pup could have died. I have photos if needed. They were sent to Merrick for their info and "investigation"

<a href="#">EON-341704</a>	11/14/2017 14:04	Good Lovin' Cow Ear	<p>(b) (6) became very ill having non stop diarrhea and constant vomiting after consuming a Good Lovin rawhide Cow ear. Worrying about dehydration, I contacyed his vet who recommended that I bring (b) (6) in ASAP. Upon arrival at the vets they evaluated (b) (6), asking the usual questions about diet, exposure to other animals, non food items, etc. I explained that, (b) (6) has had no changes in his diet-food, he gets absolutely NO human food whatsoever, he is an indoor dog only, there are no other pets in the house, we do not bring (b) (6) outside, we also do not and have never worn shoes in our house, (b) (6) drinks bottle water not tap, and it is/ was physically impossible for (b) (6) to have eaten anything he was not supposed to ie: trash, a toy, etc. I could say this with 100% certainty because when (b) (6) was a year old he got very ill and we thought we were going to lose him, so from that day forward we have been obsessively conscience and extremely diligent to ensure that (b) (6) does not ever get ill from ANYTHING within our control. I also explained that (b) (6) was only allowed to have 2 "treats" if you will, which he has had since he was a puppy: RedBarn bully sticks and RedBarn cow ears-bagged or plastic wrapped only-in order to avoid any possible dog-to-dog contamination and possibly making (b) (6) sick.</p> <p>The vet then took (b) (6) and preformed 2 x-rays to check for a possible blockage anywhere along his digestive track-both were negative and drew some blood. After about 30 mins, the vet returned and explained that unfortunately they don't have a definitive explanation as to why (b) (6) got sick. She explained that they gave him subcutaneous fluids and an anti-nausea medicine and sent him home with Flagyl. She stated that (b) (6) liver enzymes were slightly off but was nothing to panic ovet at this time but we should do a follow up blood test in 14-21 days just to make sure there was not some underlying problem causing the enzymes to be off.</p> <p>Seeing that (b) (6) was feeing much better I let out a sigh of relief, however, I was deeply disturbed by not having the answer to the question of what/why/how did (b) (6) get sick in the first place. Being a person who needs answers I began to thoroughly examine my apartment. I searched every inch of it, under beds, under every piece of furniture, under dressers, behind doors, I stripped the beds down to the bare mattresses, I shook every sheet, blanket and comforter out looking for ANYTHING that "might" have made</p>	6 Years	Terrier - Yorkshire	Dog	8 Pound
----------------------------	------------------	---------------------	---	---------	---------------------	-----	---------

			<p>(b) (6) so ill and found NOTHING! I then carefully examined ALL of his toys to see if any showed signs of something missing, rips where stuffing could have come out, damage etc, again nothing was amiss. Not finding the answer in any of those "things" I then focused on his food. I immediately checked for recalls of his food and there were none. Even more frustrated and perplex I called the vet and asked if they could send me an email of his blood work. Upon receiving his results I began to research each and every blood test they had done and what those results might possibly mean. After 9 hours of research I discovered that (b) (6) had seemed to have suffered some kind of acute liver damage and most likely from consuming "something" he was not supposed to. But what?? Since a thorough investigation of my apartment turned up nothing, my inspection of his toys showed nothing, and his food was not under recall the only 2 things left to investigate were his bully stick and his cow ear. The bully stick search yielded no known recalls, which only left his cow ear. Luckily, we had purchased 2 of the cow ears (b) (6) had consumed and still had one still in its wrapper. I immediately searched to see if any Good Lovin products had been recalled and found out that they in fact had recalled a series of their rawhide dog chews. I checked my product lot # against those which were recalled and my product didn't seem to match the recalled ones. Based on (b) (6) becoming suddenly ill after consuming one of their products I called the phone number listed in the recall to let them know that perhaps they should include the product I had because my dog had fallen ill after eating it. To my horror, when I gave the representative the lot#, sku#, and expiration date, she informed me that that product was in fact under recall! Adding to my shock and horror was the fact that we had just purchased those Good Lovin Cow ear dog chews on September 9, 2017 and the recalled was from June of 2017!!!!</p> <p>I finally had my answer: Our beloved Yorkie became suddenly ill because we were able to purchase and give him a dangerous and previously (4 months prior) recalled product. Not only did (b) (6) become suddenly and violently ill after consuming this product, but it also appears as though he suffered acute liver poisoning from this product.</p>

<a href="#">EON-341688</a>	11/14/2017 13:08	Nutro Max Adult Recipe with Farm-Raised Chicken Mini Chunk	<p>On Saturday (b) (6), at 9:30 AM my husband fed our 3 dogs, ( the other two dogs eat a different formula from the same brand) within an hour of eating, (b) (6) got off the couch and was vomiting and defecating on the floor, my husband got up and took him outside and set him in the grass. (b) (6) then collapsed in the grass, but was still conscious. At 11:00 AM we got in the car to take (b) (6) to the vet. It is about a 15 minute drive, and on the way there he stopped responding to us, and when I lifted his head he would not move his eyes to look at me. Once we got to the vet's office, they took him in the back and said all his vitals seemed fine, but his heart rate was high and he was completely unresponsive. They did blood work and told us that his liver enzymes were abnormally high. The vet asked if we had any sago palms or other toxic to dog plants in our yard. We do not. (b) (6) sleeps in our bed, so he did not get into anything during the night, and after he ate he did not leave our sides. He goes outside on a leash, so it is not possible that he got into anything while outside. (b) (6) ate out of a new bag of dog food that morning, that was bought the night before.</p> <p>The vet tech came into the room and let us know that she thought he was taking his final breaths, and said we could see him. When we walked into the back (b) (6) was receiving oxygen and could still barely breathe. They told me that he was completely unconscious and was unaware of any pain he was in. I asked them to go ahead and euthanize him because it wasn't fair for him to not be able to breathe. My dog who had been perfectly healthy and running around at 9:30 AM was now dead at 12:00 PM.</p>	9	Years	Terrier - Jack Russell	Dog	18.2	Pound
<a href="#">EON-341671</a>	11/13/2017 20:36	Fromm Adult Gold	<p>Began transitioning from Fromm puppy to Fromm adult gold. She was reluctant to eat it the first time, but eventually did. She got nauseous later that night then started to have diarrhea. We treated with ondansetron, metronidazole and a bland diet - she started to get better within 36 hours and was having normal stool again within 48 hours. We thought the new food was most likely a coincidence, and she picked up a GI bug from doggie daycare, the environment, etc. We then started to mix some of the new food in with her bland and old food again and she started become reluctant to eat, started to have diarrhea, then started to vomit again.</p> <p>Blood work relatively unremarkable. Ultrasound consistent with gastroenteritis.</p> <p>Granted this could still be an infectious or other disease process, but the introduction of the food and response on 2 occasions is a little suspicious.</p>	1	Years	Mixed (Dog)	Dog	50	Pound

<a href="#">EON-341466</a>	11/9/2017 22:04	Diamond Hi-Energy	Dog had started vomiting and having runny stool. One week before purchased a new bag of dog food, next day my other dog that was one year younger than this one got sick with same symptoms was taken to vet and was put down one week before. Buckshot is currently still at the vet on support. Our vet and a disease specialist both think salmonella is likely evident.	4	Years	Pointing Dog - German Short-haired	Dog	60	Pound
<a href="#">EON-341459</a>	11/9/2017 21:20	Diamond Hi-Energy	He got very ill very quickly. He started vomiting frequently and had very liquid bowel movements very frequently starting Wed Nov 1. We took him to the vet, they determined there is something blocking his intestine. It was either put him down or a very extensive and expensive surgery that they weren't sure he would make it through. We had him put down Friday Nov 3. After he was gone the vet wanted to know what the blockage was - it wasn't a blockage afterall. His small intestine was wrapped around his large intestine twice. The vet told us there was no way he would have made it through surgery. We thought it was a freak incident....until Wed. Nov 8 another one of our dogs got sick with same symptoms. He is currently at the vet clinic. They have determined that the dogs were either poisoned or have salmonella. They're not able to test the other dog (Buckshot) at the time because his bowel movements are water. They're not sure he will make it, right now it's a waiting game.	3	Years	Pointer - German Longhaired	Dog		

<a href="#">EON-341436</a>	11/9/2017 13:00	Digest-eeze Plus Chicken Wrapped	<p>We purchased Digest Eeze dog chew rolls wrapped in chicken jerky for our dog (b) (6). It was his favorite treat. He would have 2 each week as they lasted several days. We purchased them from Petsmart every weekend. We were always careful to never buy any treats made in China. We purchased Digest Eeze because they were safe and supposedly digestable.</p> <p>(b) (6) became noticeably sick in the summer of (b) (6) but may have been sick for a while without our knowledge. In summer, he was vomiting and not as active as usual. He seemed depressed. (b) (6) had regular vet checkups and all shots.) I took him to the vet and she checked him out and ran blood tests. Much to our surprise, he was in kidney failure. He spent 2 days in the hospital for IV hydration and was barely eating at this point. Even with IV hydration, his creatine (10.6) and BUN levels were extremely high. The IV hydration was not helping and the vet's advice was to put him down before symptoms got to the end stages of kidney failure. We brought him home and he continued to vomit and not eat. He was still able to urinate, but the vet explained that even though he was still urinating, his urine was "clear" and his kidneys could not work to eliminate the toxins that were building in his body. About 4 days later, I took him to the vet and euthanized him. He was only 7 years old. I know that some people do not understand how deeply you can love a dog, but losing (b) (6) was losing a member of our family. We loved him. I have read about the reported problems with certain brands of chicken jerky. Digest Eeze has now been removed from stores. I could never prove that Digest Eeze was the cause of (b) (6) kidney failure, but based on the many recalls and the many dangerous pet treats that have caused pet illness and death, I believe it was the cause. I will ask my vet to file a report and to provide any pertinent information.</p>	7	Years	Mixed (Dog)	Dog	30	Pound
<a href="#">EON-341412</a>	11/9/2017 10:48	Castor & Pollux Natural Ultramix Grain-Free & Poultry-Free Adult Dog Natural Salmon	<p>I switched foods because of a special chewy had to entice customers to try a new brand. I read review on Castor and Pullox and decided to try it. My dogs were very healthy before I switched brands. After eating this brand for about 3 weeks one of my dogs got very sick with lots of bright bloody stool starting Monday Nov 6th, the next day, Tue, it was black (old blood) stool, but he was hungry and I made him chicken and rice and gave him subcutaneous fluids every day he's been sick. The next day, yesterday, Wed, he refused to eat or drink and the red stool came back. I took him to the vet, waiting on bloodwork results. Last night, my other dog became ill and vomited and had diarrhea. This morning I have 2 sick dogs. I'm wondering if it's related to the food. Have you had any other reports come in lately about this brand? They will only be eating chicken and rice and ID formula food until this resolves. Please contact me and let me know if there has been report with Castor and Pullox food. I cannot see what else can be causing this.</p>	9	Years	Terrier - Yorkshire	Dog	7	Pound

<a href="#">EON-341309</a>	11/7/2017 17:57	Friskies Shreds Turkey & Cheese Dinner in Gravy	I have always fed my 2 cats Friskies soft canned food in the morning. They have had all of Friskies soft canned food flavors except anything with fish or tuna. I fed them Monday morning (11/06/2017) at 11am as usual, Friskies Turkey & Cheese Dinner in Gravy (Shreds) and by noon both cats had diarrhea and continued to have uncontrollable diarrhea the entire day and into the night. My two cats have never had this issue before and then by 9pm they were both throwing up the food multiple times. Then in the morning at 11am on Tuesday (11/07/2017) one of my cats had uncontrollable watery bloody diarrhea. I took her to the vet for treatment and noon that same day. Since both my cats had the same reaction after I fed them this soft food I know it was caused from the food.	10	Years	Sphynx	Cat	8	Pound

<a href="#">EON-341153</a>	11/5/2017 2:48	Premium Pork Chomps Pig Earz	Ate one pork chomp pig ear and LOVED it, stole another while we weren't looking and immediately projectile vomited before even finishing, didn't continue eating it. This is a 8 month old lab puppy, FULL of energy and crazy, wouldn't even move for the rest of the night except to pee (excessive amounts) and drink water. Thinking it was just because he ate two, a few days later we gave him one more, he threw up in the car, had projectile diarrhea, up to this point still hasn't had any energy or interest in food or exercise, can Hardly even get him up off the floor. Breathing hard and fast, runny nose, and excessive Inting also currently occurring.			Retriever - Labrador	Dog		

<a href="#">EON-341151</a>	11/5/2017 1:00	Purina Cat Chow Indoor, Meow Mix Indoor Formula	My calico cat began vomiting a few weeks on (b) (6) but no other symptoms until last week she was quite lethargic on (b) (6) and then on (b) (6), went to vet and was shockingly told had abdominal cancer as they had to remove a lot of fluid from her abdomen as her breathing prior to going to vet was labored and no idea was ill with cancer. I thought possible pneumonia. She then was taken to a different vet as per my recommendation as was very displeased with exact diagnoses not given by first vet. The second vet, whom have dealt with many years, said the fluids in stomach having been prior removed, was not a good sign. There was no exposure on the part of this cat or my others, to any pollution or smoke, therefore, I attribute the problem to the food, which for many years consumed either Purina Indoor formula or Meow Mix Indoor Formula. I am devastated at this terrible loss as my cat (b) (6) was my ultimate favorite cat whom I adored. I think these foods need to be highly investigated and want to know the outcomes. In (b) (6) my (b) (6), another cat, passed from stomach mass and was and still am devastated by this. In (b) (6), a male cat passed from a lump in legs which travelled as cancer. I think having three cats who had cancer in this way is more than just coincidence and would like this to be thoroughly investigated.	11	Years	Domestic Shorthair	Cat	12.5	Pound

<a href="#">EON-341024</a>	11/2/2017 21:44	Nature's Variety Instinct Raw Frozen Bites All Natural Beef	I microwave frozen Instinct Raw bites so I can hide medicine in them for my dog. They are a frozen treat/food additive that is allegedly made with all natural ingredients. I have seen them pop and have burn spots on them after only 5 seconds. I thought this was because they were so small and cooked incredibly fast. Tonight, in 7 seconds, it set the paper towel on fire which burned completely before I was able to get it out. I cannot find anywhere on the package that says they should not be microwaved to thaw quickly. Besides, if they are made with the ingredients listed, they should not be doing this. Nothing else was in the microwave but the four bites and a paper towel. It's very disturbing since I have been feeding these to my dog, (b) (6) I.						
<a href="#">EON-341020</a>	11/2/2017 19:36	NaturVet Senior Wellness Hip & Joint Advanced	2 days after starting to give my dog Naturvet Senior Wellness Hip and Joint Advanced treats daily (half of a treat in the morning) my dog began to have watery diarrhea. He needed to be taken to an emergency animal hospital where he needed to be given fluids, anti nausea medication and antibiotics. The doctor diagnosed him with colitis possibly due to Naturvet Senior Wellness Hip and Joint Advanced treats due to the facts this is the only new food/treat our dog started recently.	11	Years	Mixed (Dog)	Dog	11.5	Pound
<a href="#">EON-340776</a>	10/31/2017 17:56	Sheba Perfect Portions Pate in Natural Juices Chicken Entrée	I'm a (b) (6) My 5 house cats get a varied diet, are given their routine favorites at routine times of day. I order a couple of the food brands and flavors by the case. Mars Pet food had recently phased out their Sheba 3 oz cans in favor of "perfect portions", which are packaged in two(2) perforated/separable 1.3 oz plastic, foil-topped containers. As my mail-order sources ran out of the 3 oz. cans, I asked my husband to get some of these "portions" locally to try on our cats before our stock of Sheba cans ran out. (b) (6), (b) (6), (b) (6) and sometimes (b) (6) i would eat Sheba Chicken Pate in cans: (b) (6) would not eat it. When I tried the first 1.3 oz portion one evening, only (b) (6) and (b) (6) ate it, the others still preferred the canned of the same flavor. My husband got a couple more of the plastic portions from a different store a few days later. On Oct 15, with their regular nightly selection of foods (4-5 different flavors, a half to a full 3 oz. can each, as each cat of course has his preference, though they share several flavors, a few different brands), I also put out one (1) 1.3 ounce (b) (6) portion out for (b) (6) and (b) (6). I did this three nights in a row (Oct 15-17); I watched both of them eat most of it the first evening (b) (6) I, more assertive, usually takes the lion's share first), and some of it the second evening, along with their other usual foods that make up the bulk of their overnight intake. The third evening, (b) (6) got up from a sleepy day, eliminated a pale, smelly diarrhea, and vomited once he exited the litter box, uncharacteristically not burying the stool. His inner eyelids were apparent (similar to an animal being tranquilized with acepromazine), as if very, very sleepy, rather than alert as he usually is in the early evening. He was notably lethargic, slowly retreated to a quiet area away from the other cats, did not eat for two days (he held down water after a day). He had little interest in food for another 4-5 days; I coaxed him to eat very small amounts of his favorites, a little more each successive day. He became more alert by Day 3 of his symptoms, but his appetite took an additional 3 days to return; his behavior suggested taste and smell abnormalities, and mild hyper vigilance. It took 6-7 days for his appetite to return to normal. (b) (6) was roughly 36 hours behind (b) (6) with an almost identical pattern and timing of symptoms. (Both cats were eating normally and active by Oct 24-25.) This makes sense, since (b) (6) ate more of the Sheba portion first. Until the 3rd night when (b) (6) became sick, I wasn't sure what caused his illness and hoped he'd eat later	10	Years	Unknown	Cat	11	Pound

			<p>in the night, so I put down one more 1.3 oz portion with the other foods of routine - only (b) (6) ate a little from that dish. However, (b) (6) now has symptoms of reactivated rhino virus (presumably due to the food poisoning stress). He was eating and becoming more active for about 2 days after his GI ordeal, but began sneezing, runny nose and eyes around Oct 26. He is still eating, but skips his normal evening activities. He has not had URI symptoms since he was rescued 9 years ago. Presently, he seems to be recovering in the normal amount of time for a rhino virus. As a 50 year cat rescuer, this was far more severe than merely "new food tummy ache." All 5 cats share food bowls, litter boxes, playing, sleeping and living areas. None of the other 3 cats have shown any symptoms remotely similar to (b) (6) and (b) (6); none of the other cats touched the Sheba (or Wild Calling) food. My vet has been informed. Nutritionists at two pet food companies have been informed. (A second suspect food which (b) (6) and (b) (6) ate, Wild Calling, has tested samples from the lot I have for bacteria and nutrition, but not for contaminants.) Mars/Sheba, the most recent new lot of food these two cats ate, and more likely suspect, showed no interest in testing the lot#s of the food I still have here. I'm concerned about other people's pets getting this food. A kitten, geriatric, chronically ill or immune suppressed cat might die or be more severely affected than my cats have been. I don't know yet if my own cats will have lingering or chronic after-effects.</p>						
<a href="#">EON-340769</a>	10/31/2017 16:24	Rachael Ray Nutrish Real Chicken & Brown Rice Recipe	<p>I purchased Rachel Ray Nutrish Nautral Dry Dpg Food, Real Beef and Brown Rice, after a few days after eating this food my pekingese was rushed to the ER. My dog had bloody diarrhea he left pools of blood every where I washed him and saw the blood coming out of his anal. ER admitted him as he was needing critical care. He was diagnosed with Hemorrhagic gastroenteritis (HGE). My vet confirmed that the change of food set it off. My (b) (6) was healthy prior to this I never had any issues. I had to put him down his was in such bad pain.</p>	10	Years	Pekingese	Dog	13	Pound
<a href="#">EON-340664</a>	10/30/2017 22:56	Taste of the Wild Sierra Mountain Canine Formula with Roasted Lamb	<p>My dog absolutely loves Taste of the Wild dog food and has never had any problems in over 5 years of using them. This last bag I bought though, he just will not eat! He is a free-feeding dog that eats when he's hungry, his bowl is always full..., but I usually refill his bowl every two days or so, I haven't had to refill it once in over 3 weeks! I even tried enticing him to eat it by adding people food to it, he still won't eat it! I truly believe there is something wrong with this bag of food and my dog senses or smells it, there is no other reason my dog wouldn't eat it. I don't know how dog food recalls are done, or how to find out if one has been recalled, so I am starting here.</p>	11	Years	Siberian Husky	Dog	63	Pound

<a href="#">EON-340659</a>	10/30/2017 20:36	Royal Canin Intense Beauty Thin Slices in Gravy	<p>We have Royal Canin Intense Beauty Thin Slices in Gravy with a lot number of 730C3NSC1. We have 102 Cans purchased from Chewy. The first order was around the first/second week of September and the second case was received last week.</p> <p>Both of our cats started having vomiting and diarrhea. We took them to the Vet and were prescribed meds and told to change food. We changed food and they gradually got better, so tonight we fed a can from the new shipment, and one of our cats turned her nose up at it, and the other one threw up the entire contents of her stomach within 10 minutes of eating the cat food. Needless to say, we need to send this food back to Chewy. I will write to them this evening as well to start the process.</p> <p>There needs to be an investigation into this matter before more cats are sick.</p>	3	Years	Ragdoll	Cat	10	Pound
<a href="#">EON-340639</a>	10/30/2017 16:00	Taste of the Wild Sierra Mountain Canine Formula with Lamb in Gravy	<p>Watery diarrhea started Saturday night, Sept 23, 2017. Stopped taking Carprofen Sunday morning. Continued normal feeding of Taste of the Wild Sierra Mountain Canine Formula with Lamb dry and either Sierra Mountain or Pacific Stream (with Salmon) or Wetlands (with Fowl) canned food mixed in. Diarrhea seemed to be improving, then vomited Monday. Changed food to white rice and pumpkin &amp; took to vet Tuesday morning. Total Health w/Spec cPL-IDEXX labs showed nothing out of the ordinary. Medicines to control vomiting and diarrhea were given. Dog had recovered, and returned to eating Dry food with canned pumpkin, then dry food with Taste of the Wild canned food alternating. Health seemed good until Saturday Oct. 28, 2017 when diarrhea started again. Since she was not on Carprofen (which we originally thought was the cause of the 1st incident) anymore, we discontinued feeding the wet food &amp; fed only the dry food. By Sunday evening she seemed much better (no diarrhea) &amp; did not need to go outside for extra walks during the night after 9:00pm. So, our thinking now is that the canned food is what was likely causing the diarrhea. Since the label had been removed from the can, I am not sure which flavor we were feeding her, but I still have 2 recently used cans available with lot numbers on the bottom, which may be from the food I still have in the refrigerator.</p> <p>#1) Best by Mar 31 20 59XSM2-H 1118 #2) Best by Mar 31 20 59XMM2-H 0326</p>	13	Years	Mixed (Dog)	Dog	26	Pound
<a href="#">EON-340636</a>	10/30/2017 14:40	Pure Balance Small Breed Grain Free Chicken & Garden Vegetables Recipe	<p>We changed over to a grain-free food for our older dog. About 2 weeks into use, we started to notice her acting sluggish like she was being careful not to hurt her abdomen. She was hunching her back to keep from anyone touching her belly. We immediately took her to the vet. The vet found extremely high levels of enzymes in her liver. I also have a friend feeding her dog the same brand as well as the grain-free version. Her dog is having similar symptoms. I advised that she needed to go get her dog tested to see if it is the same. My dog was diagnosed with chronic pancreatitis. I read up on some reviews on Amazon stating that more than a couple of people were having similar issues. They also talked about increased level of liver enzymes. After the vet visit, the vet placed her on a low fat, prescription diet moving forward.</p>	13	Years	Shepherd (unspecified)	Dog	18	Pound

<a href="#">EON-340192</a>	10/24/2017 12:16	Evolve Lamb & Rice Formula	A large chunk of rusty magnetized metal was found as I scooped dry EVOLVE dog food into my Great Danes bowl on 10/19/17. I wondered what may have happened had my dog actually ingested any of it, as well as questioned if any smaller pieces may have already been ingested by either the Dane or by any of my small Chihuahuas. In addition I worry about other dogs that are eating this same food. This piece of metal appears to be old and a bit rusty; it weighs .06 of an ounce and is just a bit larger than a quarter. This bag of dog food was purchased at Chewy.com and is the "EVOLVE LAMB & RICE FORMULA DOG FOOD"; the UPC code is 0 7365700860 6. I thank you for your attention to this issue. Feel free to contact me with any questions.						

<a href="#">EON-340191</a>	10/24/2017 12:08	Evanger's Chunky Chicken Casserole	<p>First I apologize for not submitting a report earlier. I have been a long time purchaser of Evangers canned dog food. I became more cautious after their beef recall earlier this year and returned all the cans containing beef to my retail store. However in August 2017 I purchased cans of Evangers Chunky Chicken Casserole from Healthy Pet Products Store in (b) (6). This can was a favorite of my dogs. Upon opening a can, my father noticed the color was drastically different than usual. Instead of being a light colored food in a very light sauce, this can was dark as if in beef gravy per its appearance. So he opened another can and another can only to find the same. The expiration date was December 2020. We had the same can with expiration date in October 2020 that looked normal in appearance. Unfortunately my father still gave my two dogs the food with the dark appearance, only 1 would eat it. When I came home from work, saw the dog food we immediately gathered all the cans, I had about 10-15. My dog seemed to have no ill effect from eating it but I was very concerned about this batch of dog food. I emailed Evangers twice, once towards the end of August with no response except for the automatic email reply and I emailed them again on August 30th again with no response to my problem or inquiry. I returned all my cans to the retail store I purchased them from, both open and unopened cans. The store clerks were dismayed at the appearance and issued a full refund. The store is Healthy Pet Products located at (b) (6). The owner is discontinuing all Evangers products sold at her two stores. I wish I would have kept the label, the UPC code or took a picture of the food or emailed sooner. I regret not doing so. When I asked the store owner about what I returned she questioned the type of meat it actually was, horse?? It has been 2 months since emailing Evangers and they have never responded to my inquiry or concern so now I am emailing you to please look into their food, plant, meat, warehouse, or process. I believe they are putting our animals at risk for their gain and lack of commitment to quality dog food. Thank you for your time.</p> <p>(b) (6)</p>						
<a href="#">EON-340159</a>	10/24/2017 7:32	Friskies Pate	<p>Our cats have eaten Friskies can pate cat food for years. In recent months they have become very selective and now will not eat any variety in any size can and that includes the Treasures variety now. If they do eat it, they vomit. I have read the forums and there have been many complaints in recent months from other consumer but Friskies won't acknowledge. Also, they have had many issues with bugs and larvae in their dry food which I recently discovered going through the forums.</p>	5	Years	Domestic (unspecified)	Cat	8	Pound

<a href="#">EON-340147</a>	10/23/2017 21:28	Friskies Meaty Bits with Beef in Gravy	I purchased Friskies Meaty Bits wit Beef in Gravy in a 24 pack. Normally I feed him other varieties of Friskies, this was his first time having the Meaty Bits with Beef in Gravy. Week one I started to give him the food and he started having smelly gas (he never had this problem before). He started having diarrhea shortly after. I stopped giving him that particular food and tried another version of Friskies varieties. He started to get better, no more diarrhea or gas. Another week passes and I try the Friskies Meaty Bits with Beef in Gravy again. By day 2 he was throwing up and having diarrhea all over the house. Again I switched to a different version of Friskies varieties and he improved. I did try the Friskies Meaty Bits with Beef in Gravy a THIRD time, starting yesterday. This afternoon he threw up and has been sick ever since. He LOVES to eat and now he will not even touch the food on his plate. He hasn't moved from his chair all day--he is still very sick from eating the cat food I gave him. We do not feed him anything else except Friskies canned cat food. The fact that he has had symptoms THREE different times giving him this cat food has alarms going off for me. There is definitely something in this food causing illness in my cat.	3	Years	Ragdoll	Cat	13	Pound

<a href="#">EON-339716</a>	10/19/2017 16:52	Hill's Science Diet Adult Light Small Bites	<p>My small dog was switched to the "light" food in (b) (6) and started having weight loss. I took her to the vet and she had a bladder infection and had lost half her weight. We decided to remove this from her diet food as she was withering away.</p> <p>she passed away before we could get her better. I usually buy the small bites for my aussie but accidentally bought the light and started my (b) (6) on it. She lost 3 pounds the first weekend and ended up getting iv fluids, meds and a chicken rice diet. I looked at the old bag from (b) (6) and it has the same number and dates on it. I believe these are linked. My (b) (6) never leaves food and has turned away or left some in the bowl. We have a puppy who is on puppy chow and has not been ill at all. Date below is for the (b) (6). The toy chihuahua died on (b) (6)</p>						
<a href="#">EON-339658</a>	10/19/2017 10:12	Blue Buffalo Blue Wilderness Chicken Recipe Adult Indoor	<p>Started my pets in late July on the Blue Buffalo Challenge (dry food) give my cats both wet (mostly fancy feast) and dry food.</p> <p>I slowly introduced the dry food which (b) (6) took a liking to it. In late August, noticed he was a little off but nothing major. In early September, I rushed him to the vet. He was pacing, uncomfortable and trying to throw up but nothing came out. They realized he had a urinary blockage - severe.</p> <p>Vet asked what I was feeding him and told her dry &amp; wet food and the only new thing I start was Blue Buffalo.</p> <p>They flushed his system, but after three days recommended he have a PU operation in order to open his urinary tract so it would not get blocked again. ( TOTAL \$4474!) not including special food.</p> <p>I went on line to see if anyone else experiences this with BLUE BUFFALO and lo and behold, there were a lot of complaints.</p> <p>I have written the company and hoping to be compensated for my expenses.</p> <p>Now cat has developed anemia ( could be stress related as he is semi feral and hospitalized for a long time ) Vet is determining if its parasite related or auto immune. Currently on steroids and returning to vet for blood work to see if he's improving.</p>	8	Years	American Shorthair	Cat	10	Pound

<a href="#">EON-339621</a>	10/18/2017 23:12	Golden Rewards Sweet Potato Wrapped with Chicken	We purchased these treats in the evening and gave our dog 1 treat that night and 2 the following day. That evening he was very lethargic not his normal playful self but we thought he was worn out from playing outside. We gave him another treat that evening. The next morning he was staying in his bed and we had to coax him outside to go to the bathroom. His ears were tucked back. When we came home from work he didn't greet us and was laying in his bed whining. I went to pet him and he was shaking. His lymph nodes on his neck were swollen and he was obviously in pain. We gave him a baby aspirin and continued to monitor him and did not give him anymore of these treats. The next day he started showing improvement so we did not take him to the vet. It was hard to get him to go outside. After 2 additional days he is getting back to his normal self. This is the only new thing introduced to him during that time, golden rewards sweet potato wrapped in Chicken treats. I thought about giving him another treat when I realized this may be the cause. I checked the package and was alarmed seeing the misleading USA distributor in bold print followed by smaller print saYing made in china and am irate after looking the product up on the Web and reading the horror stories and fda complaints. I am apalled that this pet poison is still on the shelves. My dog is a member of my family.	6	Years	Bulldog - American	Dog	42	Pound

<a href="#">EON-339468</a>	10/17/2017 11:32	PureVita Chicken & Brown Rice Formula	All three of my dogs were eating the same dog food kibble. when the 2 other became ill in early (b) (6) and were prescribed bland diet, I chose to feed (b) (6) bland diet as well, simply for convenience. My one male husky died from this suspected pet food contamination on (b) (6) , but at the time I did not suspect that the food was the root cause of all this illness for my dog sin (b) (6) . Only when I attempted to transition my 2 surviving dogs back to their regular diet on (b) (6) , within 2 days, both dogs were showing signs of hemorrhagic gastroenteritis. For (b) (6) , this was his 3rd occurrence that month. (b) (6) was showing the same signs as well, decreased appetite, lethargy, bloody loose watery diarrhea. I call my vet and given the recent history with my other 2 dogs that month, she prescribed Metronidazole for (b) (6) , 500 mg, 1 tablet twice daily for 14 days along with a daily probiotic and bland diet. After this last re-occurrence, I have not feed the contaminated food to my dogs again and will not feed it to them again.	5	Years	Siberian Husky	Dog	54	Pound

<a href="#">EON-339463</a>	10/17/2017 11:12	PureVita Chicken & Brown Rice Formula	<p>Opened new bag of food on (b) (6) and fed all three dogs from this bag of food. (b) (6) was ill within 36-48 hours. Seen at the vet on (b) (6) with diarrhea, gastroenteritis, decreased appetite, weight loss but no fever. He was treated with IV hydration, anti nausea medications, antibiotics and Aluminum Hydroxide Gel along with bland diet for several days. He has recovered and returned to his normal baseline by (b) (6). Spoke with my vet that day to follow-up, stating that we was doing well, had recovered for this most recent episode of gastroenteritis, was eating great on bland diet, stools were normal, going for short walks, 20-25 minutes. On (b) (6) (pm meal) I attempted to transition (b) (6) back to his normal diet. On (b) (6) when I came home from work at about 530-545 pm, I found (b) (6) splayed out on the kitchen tile floor in near respiratory distress. He was unable to sit up or ambulate. He has bloody mucous discharge from his rectum. His eyes were open but he appeared not aware of his surroundings or of my presence. I wrapped him in some large towels and placed him in my SUV and drove him immediately to the Emergency Clinic in (b) (6) alerting them to my imminent arrival via phone. Upon arrival (b) (6) was stretched into the clinic and taken to the treatment area for immediate evaluation and treatment. It was about 30-45 minutes before the ER vet came and spoke to me. They informed me that he was in hypovolemic shock due to massive GI bleeding, his temperature upon arrival was 104.5, he was in respiratory distress from shock, blood pressure was 90 (hypotensive), but at times during treatment it dropped to 40 due to continued uncontrolled GI bleeding. They told me that his condition was very critical, they were working hard to stabilize his condition. He was given IV fluids and numerous drugs through the IV to try and try and stabilize his condition. In the middle of the night he was given a plasma transfusion and despite al of these efforts he continued to pass large amounts of liquid blood from his rectum. His blood pressure was too low to sustain life and we went into respiratory arrest and passed away at about 330 am on (b) (6)</p>	9	Years	Siberian Husky	Dog	46	Pound
<a href="#">EON-339454</a>	10/17/2017 10:28	PureVita Chicken & Brown Rice Formula	<p>Open new bag of food on 8/31/2017, feeding the same food to all three of my dogs, (b) (6) began ill within 3 days, was eventually seen at the emergency clinic in (b) (6) on 9/6/2017, diagnosed with hemorrhagic gastroenteritis. He was treated with several medications and bland diet. Every time I attempted to transition him back to his regular diet he would relapse and have recurrent symptoms of hemorrhagic gastroenteritis, as did all of my dogs during the month of September 2017 and early October. After 3 rounds of antibiotics and 3 failed attempts to transition them all back to their regular diets, I firmly believe that the food is contaminated or has microbiologic impurities.</p>	10	Years	Retriever - Golden	Dog	100	Pound

<a href="#">EON-339453</a>	10/17/2017 10:16	Hill's Prescription Diet k/d Canine	After some blood work on our Cairn Terrier, (b) (6), our vet recommended this dog food. He gave us a sample pack, we mixed with our dog's usual food (Nutro) he seemed to do ok with it. I purchased a bag from the vet on Friday, again mixed with his usual food, that night he vomited all of his meal up, about 45 minutes after eating and he tipped over and got really stiff, in hindsight, this may have been a mild seizure, but he bounced back quickly. Saturday was uneventful. Sunday within 2 hours of eating, he was in a full blown seizure, that lasted approximately 7 minutes. We rushed him to a pet hospital and he had to be put down due to the neurological damage that occurred as a result of the seizure. They questioned me at the pet hospital if he had gotten into any toxins, which he did not. I never thought of his dog food until the next day when our regular vet called and they want the food back.	13	Years	Terrier - Cairn	Dog	14	Pound

<a href="#">EON-339186</a>	10/13/2017 19:48	Premium Bird Feed Thistle Seed	Purchased thistle (niger) bird seed from local Walmart. Noticed finches acting strangely, not flying away, confused. Found many dead finches and some dead field mice in my backyard near the feeder. Then noticed a finch feeding at the feeder and approximately 3 hours later found in on the ground fluttered its wings and beak in the dirt with clear central nervous system impairment. Recovered dead finches and put in iced cooler. Contacted Arizona Department of Agriculture. Pesticide Control inspector came to my house two days later and recovered bird seed to test for toxins and also dead bird for autopsy. Google search found Walmart has sold pesticide toxin thistle seed in (b) (6) and killed hundreds of birds. Also press release from US Dept of Justice regarding 112 million settlement with Miracle Gro who knowingly sold toxic bird seed contaminated with EPA banned chemicals. Suspect this bird seed is contaminated with pesticide. Contacted Walmart 9/25/17 and notified them of bird deaths. State Pesticide inspector also notified local Walmart of this complaint.						
<a href="#">EON-339148</a>	10/13/2017 15:00	Nutro Farm-Raised Chicken, Brown Rice & Pumpkin Adult	After feeding her this dog food, her fur fell out in clumps, she stopped eating, she became very lethargic, and vet said her liver enzymes were very high. She could barely stand.	14	Years	Mixed (Dog)	Dog	60	Pound
<a href="#">EON-339137</a>	10/13/2017 14:00	Redbarn Naturals Beef Pate Urinary Support with Parsley & Cranberries	Piece of blue plastic was found in the cat food I was giving my cats. This blue piece of plastic in the Redbarn cat food looks just like the piece of plastic I also found in Hound & Gatos cat food! I am outraged over this as I feed my cats these "superior" brands to avoid these types of problems.						
<a href="#">EON-339131</a>	10/13/2017 12:00	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	Purchased Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison dry food (15 lbs.) from (b) (6) on September 21, 2017. Product bar code 074198609635, TDH0721 RBF 10:38 337, food expiration date: 28 Jul 2018.  Pet ate food and had a severe case of diarrhea and vomiting. Veterinary test and ultrasound revealed extensive thickening, ulceration and irritation of his digestive organs.  Veterinary bill was about \$2,000 that includes all test, medications and prescription foods.	4	Years	Mixed (Dog)	Dog	26	Pound

<a href="#">EON-339085</a>	10/12/2017 23:16	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	I have been feeding Taste of The Wild Bison & Venison dog food (Puppy to Adult) to my Aussie for 4 years. About 3 1/2 weeks ago, I bought a new bag of dog food. He started turning away from his food and leaving most in his bowl. He was vomiting about 2-3 times per week. This past week he started vomiting 2X daily. Loose stool and acting lethargic. I stopped feeding him this food and put him on a rice/chicken/pumpkin diet. He immediately chowed down this food and is acting normal again. No vomiting, etc.	4	Years	Shepherd Dog - Australian	Dog	50	Pound
<a href="#">EON-339084</a>	10/12/2017 23:16	Golden Rewards Chicken Jerky Recipe	I gave him 2 bites torn from a jerky stick--all other food was the same as he consumed for many days prior and no other treats were given within days of this incident. He had diarrhea for 2 days and vomited for half-day. He lost weight--it was a significant event. I couldn't get an appointment with his vet. I watched him closely--prepared to take him to emergency vet hospital if necessary, but he slowly improved.			Pekingese	Dog	14	Pound
<a href="#">EON-339077</a>	10/12/2017 19:36	Dingo Meat in the Middle with Real Peanut Butter - Mini	I gave my dog a mini "Dingo Meat in the Middle with Real Peanut Butter" treat that he could not digest because the treat was softened and trapped near the back of his throat having attached itself to the back teeth. I had to stick my hand in his mouth to remove the treat before he choked on it. I was concerned the dog would not allow me to place my fingers in his mouth although I was able to do so without taking him to a veterinarian for extraction. I have never given my dog this product before and the packaging indicates the product was made in China.						
<a href="#">EON-339072</a>	10/12/2017 18:20	Acana Grasslands Regional Formula	Our two large dogs (lab and golden retriever) were both lethargic and vomited about ten times throughout the night. They had no other treats or ingested any other substances prior to eating the Acana Grasslands dog food that day. They usually eat Acana Grasslands dog food and have eaten it for years. We fed them as usual. However, over the past six months, we had noticed some white spots on their food with previous bags, but we thought this was natural variation in the appearance of the food. After inspecting this bag carefully, we discovered large areas of white mold in the bag. This was a brand new bag that had not passed the expiration date. I have other friends who are also finding mold in their Acana dog food, so I am hoping that you could look into this to protect other dogs from getting sick. My dogs have now fully recovered, but they also do not have compromised immune systems, thankfully. We always loved Acana food due to their ingredients, and I am sad that we can no longer feed this brand to our dogs. It seems like something might be going wrong in terms of the production and packaging of the food.	10	Years	Retriever - Golden	Dog	65	Pound

<a href="#">EON-339069</a>	10/12/2017 17:52	Darwin's Natural Pet Products Natural Selections	I ordered a trial offer of Darwin's Pet Food. My dog wouldn't eat it, so I called their office. The person on the phone told me to "cook it a little bit, just pick out the bones you can feel". So I did that. Unfortunately my dog became very ill with bloody diarrhea, vomiting, lethargy, refusal to eat, and refusal to get out of bed. After 3 trips to the ER, my dog was admitted to the hospital. After xrays & ultrasounds, he was found to have a mass of bone shards in his stomach. The ER doctor told me that bones weren't digestible and the shards are tiny - too small to miss by hand. The shards had completely ripped his stomach so much that the doctor said they only see that level of inflammation in pets with stomach cancer. My dog has been sick for over a week and after staying in the hospital for IV fluids and several medications. He is starting to feel better. Also, in the beef product there are large pieces of white, hard objects - I have no idea what it is - you cannot cut it with sharp steak knives. The pieces are the size of a quarter - my dog is 13 pounds, thank goodness he didn't try to swallow one of these pieces. I feel there is a huge quality control factor in this product. In the second shipment I received, the beef is completely brown before and after thawing and has a very sour smell. My dog would not eat it - thank goodness.	5	Years	Havanese	Dog	13	Pound
<a href="#">EON-338916</a>	10/11/2017 11:20	Nature's Variety Instinct Raw Chicken Recipe Medallions	After opening a new bag of Natures Way "Instinct Raw" Chicken Medallions our Chihuahua became violently ill within a matter of hours. <a href="#">EON-338897</a>	10/11/2017 3:48	Bully Max	Dog food was tainted gone bad... I have previously feed this the entire year before, upon notice on new shipment food seemed smaller bites! After my dogs straying yo get sick one by one, vomiting yellow in the middle of the night. This when on for about two weeks until yesterday, buying new food problem solved! I called the manufacturer told the. About issue no response!						
<a href="#">EON-338893</a>	10/10/2017 23:00	Fancy Feast Chunky Chicken Feast	My kitten ate a can of Chunky Chicken Fancy Feast and an unknown shard lodged in his cheek. Luckily, the Vet found this while he was being neutered and declawed. He had a massive infection and several teeth had to be pulled from his top and lower gums. The Vet saved the shard, sealed it in plastic and gave it to me. I have photos of it. I called Purina/Fancy Feast to report the issue. They forwarded the information to their outside claims company. They called 3 times and I called them 10 times but have not heard from them in almost 2 weeks. I called Purina twice after they forwarded to their outside claims company. Neither company has shown any interest in this. My kitten is alive thanks to the fact that he was scheduled for surgery. He could have died as the infection was so serious and he was so young. He is doing better but not fully eating dry food when I put it out and I do not know what long term damage this may cause. I have his medical records from my Vet to substantiate this. I am using his surgery date as the date the problem started because I don't know when he actually ate the shard - probably a week or two prior to this date. I am using today as the date of recovery .	5	Months	American Shorthair	Cat	7	Pound

<a href="#">EON-338782</a>	10/10/2017 12:20	Lafeber's Tropical Fruit Nutri-Berries for Parrots	<p>I bought 25lb of pet food from the store "my safe bird store" (website: <a href="http://www.mysafebirdstore.com/">http://www.mysafebirdstore.com/</a>).</p> <p>The food is made by a company named Lafeber Company (CEO: Dr. Ted Lafeber III, addr 24981 N 1400 East Road Cornell, IL 61319)</p> <p>The food is infested with worms and covered with their web excrement. I contacted the store and more than once I expressed my concern to keep the infested food in my house and more than once I requested for a return shipping label. I didn't receive any position about my concern and my request for a return label.</p> <p>In addition I asked for a replacement. I also send picture of the worm and the web that covers the food.</p> <p>The store told me they contacted their sale representative in attempt to try solve this issue but I understood Lafeber did and will do nothing about it, so I decided to report this and have this infested food be handled by the proper authorities because I'm worry about having people and pets's healthy exposed in addition to affect the environment with this infested food.</p>

<a href="#">EON-338486</a>	10/6/2017 18:20	Steve's Real Food Raw Frozen Nuggets Chicken Diet	Steve's Real Food I loved this food for my dogs until I found a piece of ferromagnetic metal in the middle of one of the nuggets. After contacting Steve's I feel that I will never buy it again! They were completely nonchalant about the whole thing. Acted like it was no big deal that I almost fed my small dogs metal in their food. And just told me they would look into where it may have come from.							
<a href="#">EON-338462</a>	10/6/2017 16:12	Merrick Lil' Plates Grain Free Real Salmon + Sweet Potato Recipe	I fed my dog, (b) (6) Merrick Lil' Plates Salmon + Sweet Potato Recipe. Approximately 20 minutes after eating the dog food, her stomach started making loud squealing sounds. For the next 2+ days she had explosive diarrhea and refused to eat any type of food. Eventually her appetite returned and her stool became solid. I suspected the dog food might be the cause. When I felt she was fully recovered, I gave a small amount of the dog food, about 2 tablespoons. The symptoms returned, stomach noises, diarrhea and refusing to eat.	11	Years	Mixed (Dog)	Dog	8	Pound	
<a href="#">EON-338413</a>	10/6/2017 9:48	Nudges Jerky Cuts Made with Real Duck	When I opened the bag of Nudges jerky cuts (duck) there was what looks to be a large amount of mold. The use by date is 01/19/19. I contacted Nudges Case # (b) (6) and Tyson but have not heard anything. I also emailed pictures to them and can email pictures to you if you want. I have used these treats in the past my dogs love them. However they have been sick in the past with throwing up but I blamed it on they probably ate something outside. These treats were bought the day before and kept in the house.							
<a href="#">EON-338383</a>	10/5/2017 22:08	Wellness Complete Puppy	My 5 month old French Brittany, (b) (6), has been eating Wellness Complete Puppy food for the last 3 months. Bought a new 15 pound bag a week ago, started noticing strong bad gas on occasion. Did not have this problem before this bag. Have new 2 month old puppy, (b) (6), have been try to mix breeders puppy food with Wellness for last 6 days, and have noticed puppy has horrible gas smell too, the same as what the 5 month old has. Concerned there maybe something wrong with Wellness Complete Puppy food.	2	Months	Brittany	Dog	7	Pound	
<a href="#">EON-338309</a>	10/5/2017 9:12	Sammy Snacks Cheddar Snackers	I opened a sealed bag of Sammy Snack Cheddar Cheese Snackers. Sell by date of 4/2018. I first noticed what looked like mold on a few pieces. After inspecting the entire bag I found around 30 pieces that have what appears to be mold, spider webs, insect egg clusters, and/or small rodent poop attached to them, or loose in the bag. I have photos of the pieces I can forward that show what I found.							
<a href="#">EON-338296</a>	10/4/2017 21:56	TLC Pet Food	TLC Pet Food of 171 Cooper Ave, Tonawanda, NY 14150, USA (716) 551-0996 is selling imported dog and cat food in USA without state agricultural permits.  Their food is made in Canada, but because they sell it online and ship direct to American homes, they think they can avoid state laws on pet food label and ingredient registration and approvals.  I ask that the FDA demand TLC seek approvals from the states they distribute to before importing pet food into the USA. Thank you.							
<a href="#">EON-338280</a>	10/4/2017 17:28	Friskies Savory Shreds with Beef in Gravy	In a can nt wt 5.5 oz of Purina Friskies Shreds with Beef in Gravy I found a copper colored wire of approximately 2 cm in length. I recovered it.							

<a href="#">EON-338188</a>	10/4/2017 11:08	Pedigree	After feeding my two dogs Pedigree canned dog food for about 3 months. (b) (6) last week started having cluster seizures. I took him to the vet for blood tests, came back with no signs of other diseases. Immediately took the pedigree food away and started feeding him boiled chicken, rice and the broth from the chicken we cooked ourselves. Seizures stopped. But, he is still very very weak, partially blind and cannot hardly walk. My female shitzu, (b) (6) is weak, lethargic as well. We don't know if (b) (6) is going to make it or not. Time will tell.	15	Years	Shih Tzu	Dog	22	Pound
<a href="#">EON-338144</a>	10/3/2017 18:48	Beneful Originals with real beef	She suddenly became extremely ill, vomiting and blood and bloody diarrhea. She was lethargic and drooling really bad. We took her to the vet they did blood work that came back consistent with poisoning. They thought she may have had something stuck in her intestines and did emergency exploratory surgery to check for blockage and he did not find anything but her intestines were inflamed and full of blood. She lost so much weight. After a week she finally started to eat and now she is on a strict diet. Two out of three dogs that eat the same PURINA BENEFUL ORIGINAL dog food got extremely sick. After the blood work we ruled everything out but then (b) (6) got sick, We were still giving Beneful to the chihuahuas and that night (b) (6) had the same symptoms and died that same night of becoming ill. We lost a member of our family and everyone was devastated by that loss. That is the only dog food we feed them. There has been no changes in the environment, our yard, the house, no chemicals, nothing.. just Beneful as their food.	2	Years	Pit Bull	Dog	40	Pound
<a href="#">EON-338132</a>	10/3/2017 17:16	Rachael Ray Nutrish Real Salmon & Brown Rice Recipe	Gave her the dry food "real salmon and brown rice" version bought at dollar general on September 30th 2017 the first day no symptoms but on October 1st I noticed her drinking more than usual. the second day also no symptoms but today the 3rd of October she had diarrhea and was sensitive to being picked up- she vomited a weird brown sticky goo- smelled like the food. I then found out the wet cat food for this brand was recalled two years ago with same symptoms due to high levels of vitamin D- I'm concerned this batch may have issues - my cat had a clear wellness exam at the vet mid September so this is definitely the food- she hasn't had this brand before ever. I called the manufacturer and they said they couldn't help me. The bag has expiration of Jan 7 2019	16	Months	American Shorthair	Cat	10	Pound
<a href="#">EON-338093</a>	10/3/2017 13:32	Blue Buffalo Life Protection Formula Fish and Brown Rice Recipe Adult	My dog stopped eating her food. I smelled it and it had gone rancid. When I contacted Blue Buffalo they said there hadn't been other reports and to get a replacement bag.  I bought a replacement bag from a different batch, and my dog wouldn't eat that food either. I smelled it and that bag too didn't smell right.  Both bags were the Fish & Rice formula, 30 lb bags. The first has an expiration date of May 18, 2017 and is from batch AH 1A 1459. I believe I bought it from (b) (6) (b) (6). The second has an expiration date of May 16, 2018 and is from batch AH 1C 1333 and I bought it from (b) (6) in (b) (6)						
<a href="#">EON-338059</a>	10/3/2017 2:32	HARTZ ULTRA GUARD PLUS	I applied Hartz Ultra Guard Plus on both of my cats after finding fleas on them. A couple hours after applying the treatment my cats started twitching uncontrollably and breathing heavily. One of them has what seems to be skin irritation( red bumps) in the area where treatment was applied. They won't eat and are not themselves.	1.5	Years	Domestic Mediumhair	Cat	10	Pound

<a href="#">EON-338013</a>	10/2/2017 16:36	Fedwell Cricket Treats	Appearing on ABC's Sep 24th, 13th-episode of FUNDERDROME, Fedwell Pet Products advertised and sought funding for "Cricket Dog Treats", which owner Emily Lagasse sells at <a href="https://www.fedwell.com/products/cricket-treats">https://www.fedwell.com/products/cricket-treats</a> as well as on Amazon.com. Description reads, "Is your dog bugging you (see what we did there?) for more Fedwell treats? Satisfy their curiosity (and yours) by trying Fedwell cricket treats. Crickets are a great source of protein, are low in fat, high in fiber, and produce minimal greenhouse gases. Our crickets come from North American cricket farms that specifically raise crickets for human consumption. They are fed a Certified-Organic grain-based diet and filtered water. To produce the cricket protein, the farms clean the crickets, dry them, and mill them into fine powder, which is then included in our tasty treats." As Crickets are not an AAFCO approved ingredient for pet treats, I'm concerned about the health and safety of any animal who consumes them.						
<a href="#">EON-337825</a>	10/1/2017 21:00	Luvsome Ocean Whitefish & Tuna Dinner	Fed her half can at dinnertime Friday, she only ate part of it. 10-15 mins later she experienced ataxia, confusion, dilated pupils, rapid heart rate. Worst of symptoms lasted a couple hours. After, she laid in corner, lethargic and less responsive than usual. Following day loss of appetite. She was back to normal Sunday morning.	17	Years	Domestic Longhair	Cat		
<a href="#">EON-337791</a>	10/1/2017 12:08	Freshpet Select	Dog food package was softer than usual in package. Other package was firm. This one felt loose. When package was opened the product had fluid in the food. Product is a moist food but firm. No additional water in package. Fed dog the food approximately an hour later the dog threw up the entire contents that was in the package. Approximately 2 hours later when walking the dog she went to move her bowels and it was completely liquid and bright red blood only. No excrement mixed in.	7	Years	Mixed (Dog)	Dog	49	Pound

<a href="#">EON-337676</a>	9/29/2017 18:32	Taste of the Wild High Prairie	<p>Upon opening a new bag of Taste of the Wild High Prairie Grain-Free Dry Dog Food (30-lb bag Best Buy 10/Sept/2018 725330 TDH0907D2M JRP 0313) (b) (6) became ill. His first meal of the new bag was 9/24/17. On 9/26/17 at 3AM, he woke us up by jumping in our bed (unlike him) to tell us something was wrong. He proceeded to projectile vomit uncontrollable on the bed and on the carpet three times while trying to make it to the door. He is a much disciplined dog (Border Collie) and never makes a mess in the house; he was very embarrassed by this clearly uncontrollable vomit. He vomited a few more times outside and would not come back inside, even when commanded (unlike him). He continued to drool excessively the rest of that night. 9/26/17 during the day he was lethargic. Normally he works all day, and he couldn't help but work a little (Border Collie), but his effort was about 20% of usual. He had diarrhea all day. He is a free eater and usual empties his measured amount every day, but he would not eat and his food bowl remained full.</p> <p>9/27/17 he was still lethargic, but was up to about 50%. He still had diarrhea and still would not touch his food. It had been 48 hours since eating when I decided to test him. My mother, who lives nearby, has fed her dogs Taste of the Wild for at least 5 years. She had a half empty bag that clearly wasn't contaminated, as her dogs and (b) (6) have all had been eating it over the past few weeks and have been in great health. I brought some of my mom's food to (b) (6) and it in a bowl next to his food that has been untouched for 48 hours. He gobbled my mom's food up. They are both the exact same Taste of the Wild High Prairie Grain-Free Dry Dog Food.</p> <p>Now we are at 9/29/17. I conducted another test. I threw out the previous food in the bowl. Got a new bowl and filled it with the contaminated bag. Got another new (identical) bowl and filled it with my mom's bag of food. Put them both on the ground, and he instantly chose my mom's bowl. This is proof. He can smell hundreds of times better than me. Taste of the Wild has contaminated food and they need to recall it. Consumeraffairs.com has hundreds of reviews from people with the same exact symptoms as (b) (6). Many reviews I read ended with dogs dying.</p>	19	Months	Collie - Border	Dog	43	Pound

<a href="#">EON-337583</a>	9/29/2017 16:52	Hill's Prescription Diet w/d Feline	<p>Day 1-My cat suddenly developed violent vomiting and diahrea after opening a new bag of Hills Prescription Diet WD feline. My cat has been on this same diet for several years and I have used Science Diet for all of my animals for years and never had a problem so I did not initially suspect the cause as being the Hills Diet. My cat also has never had diahrea and I can't remember her ever vomiting either.</p> <p>Day 2 &amp; 3-I had removed the Fancy Feast and her 1/2 tsp of Fancy Feast medleys wet from her diet, but her vomiting became worse and she continued having diahrea.</p> <p>Day 4-it dawned on me that I had just opened a new bag of Hills WD and so I withdrew that from her diet and replaced her dry food with a Purina product. No vomiting and no diahrea.</p> <p>Day 5-I reintroduced her antibiotic back to her as well as her 1/2 tsp of Fancy Feast medley. No vomiting or diahrea.</p> <p>Day 6 and today is Day 7-all seems well, no vomiting or diahrea. The culprit looks suspiciously like it was the WD Hill Diet and I am returning the rest of the product to my vet.</p>	16	Years	Domestic Longhair	Cat	10	Pound
<a href="#">EON-337560</a>	9/29/2017 15:56	Taste of the Wild Pacific Stream, Taste of the Wild High Prairie	severe lethargy, bloody diarrhea and wouldn't eat. Changed brands, all three seem better now. The other two were dragging around, the are 13 and fourteen, no other symptoms. Had been on Taste of the Wild for years. No problem, until the last two months. (b) (6) is still not up to par as of 9-29-17. Been off the for three weeks, seems better.	13	Years	Terrier - Rat	Dog	12	Pound
<a href="#">EON-337482</a>	9/29/2017 11:28	Hill's Prescription Diet k/d Feline with Ocean Fish	On Tuesday 26th 2017 we received by Federal Express a bag of k/d Hills prescription renal support from Chewy. We fed (b) (6) with the dry treats and one hour later aproximately at 8.30PM he vomited something similar to foam and pinkish, we assumed that could be hair. He didn't eat again until the next day, Wednesday 27th in the morning when after one hour of eating the Hills formula vomited again, this time, a lot and some blood. We didn't relate the episode to the food, we thought that we was experimenting symptoms of the illness. His eyes became very watery, he drank water but he felt very tired and just lied down in my bed and touched my arm with his paw, so we decided to wait and observe him. In the afternoon he ate again and again he vomited a lot and some blood. I left a message to his Vet at 5.33PM, the receptionist guarantied me that the Dr. would call. So, we assumed that were not symptoms of the renal issue, by the opposite, it was the food. We suspended it completely and switched to Friskies that was perfectly tolerated by our cat and stopped vomiting and bleeding. The next morning I sent an e-mail to (b) (6) and she called me. The lot # in the bag is: 10375 PT 313495	12	Years	Unknown	Cat	10	Pound
<a href="#">EON-337349</a>	9/28/2017 10:04	Foppers Gourmet Pet Treat Bakery	Within 48 hours of receiving the treats the dog developed a case of dietary distress and diarrhea. She was taken to the vet, and it was determined that it was most likely caused by something she ate. She was placed on dietary restrictions, and a few days later the problem resolved. She was given the treats again after she was feeling better, and again within 48 hours after receiving the treats developed a relapse of the diarrhea.	4	Years	Crossbred Canine/dog	Dog	70	Pound
<a href="#">EON-337298</a>	9/27/2017 17:40	Blue Buffalo	All three dogs in household began vomiting shortly after beginning a new bag of dog food. Two recovered with treatment and one died.			Mixed (Dog)	Dog		

<a href="#">EON-337290</a>	9/27/2017 17:08	Blue Buffalo	Dog began vomiting occasionally around (b) (6). Also had a couple of incidence of diarrhea. Seemed okay between episodes. Two other dogs in the house also vomiting but recovering with treatment.	6	Years	Mixed (Dog)	Dog	50	Pound
<a href="#">EON-337254</a>	9/27/2017 9:44	Raw Meat	<p>My neighbor is distributing raw meat pet food from her driveway. She and a colleague obtain the "food" from a farmer in (b) (6). The boxes of food have no labeling on them nor does she transport the food in a refrigerated vehicle. I have notified the local police, but, although they paid her a visit regarding this issue on August 11, 2017, she continues to distribute the food to other pet owners. I am concerned for the safety of the animals being fed this food.</p> <p>I know that the boxes contain this raw meat pet food because earlier this year (maybe in April or May) she gave me a box to feed to my dogs. I returned the box to her stating that my dogs would not eat it without feeding them the food.</p> <p>The first time I saw her distributing the "food" was on August 11, 2017. She was observed by other neighbors (not myself) distributing the "food" again on September 22, 2017.</p> <p>I have been hesitant to report her because of retaliation. She has already called (b) (6) County Animal Control on me citing failure to provide animal with sufficient food, water and/or proper shelter. A report was filed on September 14, 2017. I spoke with (b) (6) regarding the violation and it was declared unfounded.</p>						
<a href="#">EON-337228</a>	9/27/2017 0:32	Plato Thinkers Pacific Salmon Dog Treats	My dog ended up with Immune Mediated Hemolytic Anemia and his immune system caused his death within 2 weeks. I read that Zinc toxicity can be a cause or factor in this disease. I also read that dogs should not have too much zinc and I believe that 5mg. is the recommended daily dose. This dog treat that we were giving him has 180mg. but it doesn't specify what the serving size is - I am assuming it is per unit of treat. He was also getting zinc in his supplements for joints and vitamins. This may be nothing, but I think that it should be checked out for the good of animals - that is quite a bit of zinc. His stools were orange, which also is a symptom of zinc toxicity. Please check into this if you can - the overdose of zinc in food products.	8	Years	Mixed (Dog)	Dog	115	Pound

<a href="#">EON-336533</a>	9/21/2017 19:04	Simply Nourish Large Breed Adult Chicken & Brown Rice Recipe, Simply Nourish Senior Chicken & Brown Rice Recipe	My wife purchased a bag of dog food from pet smart on 9/20/17. When she opened the bag is had a maggot sitting on the top of the food. She quickly scooped it out and put in a zip lock bag. The brand we always buy for our dogs which is Simply Nourish large breed chicken and rice for our 4 yr old 145 lbs. English mastiff and Simply Nourish senior chicken and rice for our 14 yr old 85 lbs. bull mastiff/red nose pit bull mix) They haven't been eating there food like they normally do and their poop has been diarrhea for the last month. I contacted Pet smart and filed a claim. I am taking our dogs to the Vet on 9/23/17 to get a check up on their health.	4	Years	Bullmastiff	Dog	140	Pound
<a href="#">EON-336505</a>	9/21/2017 9:16	Diamond Puppy	had a litter op puppies that suddenly became ill and died just after weaning began. The same week my husband and I also were sick with what we thought was just GI virus. However, are symptoms were the same as salmonella. Headache, fever, chills, muscle aches, abdominal cramps, diarrhea x5 days.	1	Months	Rottweiler	Dog		

<a href="#">EON-336480</a>	9/20/2017 19:08	Ol' Roy Multi-Flavor Biscuits Large	A NEW BOX OF OL' ROY LARGE MULTI FLAVOR DOG BISCUITS WAS PURCHASED ON MONDAY (b) (6) ON TUESDAY (b) (6) MORNING AT 8:00AM THE BOX WAS OPENED AND EACH DOG WAS GIVEN ONE OF THE BISCUITS. MY GIRLFRIEND RETURNED HOME ON TUESDAY (b) (6) AT 3:30PM TO ALL THREE DOGS WITH SEVERE DIARRHEA AND VOMITING. I ADMINISTERED THE CORRECT DOSE OF DRAMAMINE AND IMODIUM AD. ON WEDNESDAY (b) (6) I HAD TO CALL OFF OF WORK TO MONITOR THE DOGS. THE TWO FEMALE DOGS (b) (6) SEEMED TO BE GETTING BETTER. THE MALE DOG (b) (6) SEEMED TO BE SLOWLY GETTING WORSE. ON THURSDAY (b) (6) AT AROUND 3:00AM THE MALE DOG HAD TO BE RUSHED TO AN EMERGENCY VET HOSPITAL (b) (6) BECAUSE HE COULD NO LONGER WALK. HE WAS TREATED WITH FLUIDS, ANTIBIOTICS, BLOOD PRESSURE MEDICATION, PAIN KILLERS, OXYGEN, ETC. ON THURSDAY AFTERNOON (b) (6) AND (b) (6) TOOK A TURN FOR THE WORSE AND ALSO HAD TO BE TAKEN TO (b) (6). THEY WERE GIVEN FLUIDS, ANTIBIOTICS, AND ANTI-NAUSEA MEDICINE AND SENT HOME WITH ANTIBIOTICS AND ANTI-NAUSEA MEDICINE. ON THURSDAY NIGHT I CALLED (b) (6) TO CHECK IN ON (b) (6) AND THEY INFORMED ME THAT HIS BLOOD PRESSURE AND GLUCOSE LEVELS HAD CRASHED AND THAT THEY WERE HAVING TROUBLE GETTING THEM BACK UP. AT ABOUT 2:00AM ON (b) (6) (b) (6) CALLED ME AND TOLD ME THAT THEY COULD NOT GET HIS LEVELS BACK UP AND THAT HE WAS NOT GOING TO MAKE IT AND THAT HE WAS IN PAIN DESPITE BEING GIVEN PAIN MEDICATION. I RUSHED TO (b) (6) AND HAD TO MAKE THE UNFORTUNATE DECISION TO PUT (b) (6) DOWN. (b) (6) AND (b) (6) WERE VERY LETHARGIC FOR SEVERAL DAYS BUT SEEM TO BE GETTING BETTER.	8	Years	Pit Bull	Dog	65	Pound

<a href="#">EON-336468</a>	9/20/2017 16:48	Rachael Ray™ Nutrish® Zero Grain Turkey & Potato Recipe	Rachael Ray Nutrish Zero Grain Natural Turkey & Potato Recipe Grain-Free Dry Dog Food, 28-lb bag.  I have been feeding Rachel Ray Nutrish Zero Grain to my Great Dane for a few months and I believe it has slowly made him seriously ill. Over the past few months these symptoms have progressively worsened: diarrhea, gas and the food seems to sour in his intestines and can't get through. Eats grass constantly, drinks enormous amounts of water- the vet seems to think the grass eating and water drinking are due to nausea. I am concerned that I will not be able to get the symptoms to go away. Here is a link to more people who have had complaints about it. <a href="https://disqus.com/home/discussion/dogfoodadvisor/rachael_ray_nutrish_dry/newest/">https://disqus.com/home/discussion/dogfoodadvisor/rachael_ray_nutrish_dry/newest/</a> . Also you can do an internet search for Rachel Ray Dog Food and diarrhea and many other complaints come up as well. Thanks very much!	6	Years	Great Dane	Dog	135	Pound

<a href="#">EON-336467</a>	9/20/2017 16:48	Orijen Six Fish Dog	<p>I have been feeding Orijen Six Fish for over a year and a half to all three of my dogs (b) (6), male, neutered, golden retriever, 3years old,96 lbs. (b) (6) Female, spayed, golden retriever, 2 years old, 72lbs. (b) (6) male, intact, Shi-tzu, 12years old, 10lbs. all three were thriving and healthy on this food until 6 weeks ago. About one year ago Orijen changed manufacturing from Canada to the USA and at that time their food went through some changes and my dogs were all use to the new food and had no issue the first 6 months with the new food. Well roughly 6-7 weeks ago my dogs started having issues first it was my female (b) (6) she would refuse to eat for so we brought her to the vet immediately they gave her fluids and ran tests nothing was wrong sent us home and said if she got worse to bring her back in. She finally starting eating a few days later and seemed okay. Now when this happened we had just bought a new bag of food but the other dogs were eating it so I didn't even think twice about the food. Shortly the after this about halfway through the bag of dog food my male (b) (6) starting have explosive diarrhea every ten minutes. The next morning we got him into the vet brought in a stool sample of the diarrhea, again the vet looked him over ran tests and nothing was found. Placed him on antibiotics just in case and a prescription diet for a few days. He started getting better with the prescription food mixed with a bland diet. We thought at this point maybe it was a viral infection and it would pass. Our third dog (b) (6) then followed with illness that's when I contacted Champion foods about our Orijen Six Fish. They asked for the lot numbers on my bag of food and checked their system for any know issues or complaints and found nothing stated they had no other consumer complaints. They did send me a free voucher for a free bag just in case. We stuck to a very bland diet of boiled rice and chicken everyone seemed to be getting better. I threw out the bag of food just in case. A couple days later i received me from voucher and went to (b) (6) and (b) (6) and received another bag of Orijen Six Fish checked the lot numbers and they were different so we though all was good. We started out mixing only 1/4 cup of kibble with their bland diet to ease them back into this food after a few days we were up to one cup mixed with kibble and all three of my dogs had explosive, water, slimy diarrhea. At this point I was so confused how could a food they ate for a very long time all the sudden make all three dogs sick? I</p>	2 Years	Retriever - Golden	Dog	72	Pound
----------------------------	-----------------	---------------------	--	---------	--------------------	-----	----	-------

			<p>immediately contacted Champion pet foods and let the. Know the food must be bad. They reassured me up and down nothing was wrong with the food they double and tripled tested food and everything o. Their end was good. They had me convinced something was wrong with my dogs and it had nothing to do with their food. We then went back to a bland diet I purchased another bag just in case the first two were bad. I again started really slow mixing 1/4 cup kibble with bland diet this with in a couple hours of eating all three had severe diarrhea again. I contacted Orijen immediately and explained the situation and that time they yet again guaranteed me no one was having issues but now stating my three dogs must have grew and intolerance all at the same time with this food. They also stated maybe try a different flavor so I went and bought another bag these bags are 100.00 and the same thing happened. I contacted them again and this time they said they would send me free samples to try different flavors. And reassured me nothing was wrong with the food and played the intolerance thing again. There is no way three daubs all grew an intolerance at the same time and we tried two different foods introducing very very slowly. I was pretty sure at this point it was the food but I told them I would do my own research and see if I could find out if others were having issues she gave me her email to send anything I found. Boy did I find the complaints hundreds and hundreds of pets going through the exact same thing as mine both Orijen and Acana both manufactured from Champion pet foods. All the same symptoms but some worse than others. A few comments with no issues some consumers contacted the company and never received a reply. Most comments on their Facebook page were deleted of consumer complaints!!! Who does that is champion trying to hide something. After talking with them today I know for a fact they are having massive issues and are ignoring the situation. I emailed screen shots of some of the complaints they state they never received the email. They also tried blaming the problem on the new manufacture which is a lie because we've all been using that kibble for 6-12 months with no issue. After lying on three phone conversations they had no complaints today they admitted they have some issues. But their doing nothing to fix it. And saying all these dogs built up an intolerance all at the same time were talking hundreds thousands of dogs eating both Acana and Orijen! They keep deleting consumers comments off Facebook but there are a few they missed under other people posts on Orijen Facebook page. You can see alll These complaints on Dogfoodadvisor.com search Orijen and scrollll allll the way down to the comments section and you will see page after page of complaints ranging from today to to many months ago and they are not in order per date. Then search Acana and do the same and there are even more complaints from concearned pet owners whose dogs are ill. Please help me get tthe word out because there are a few comments about healthy dogs just dying for no reason. Many complaints about the same issue I'm having with my three dogs some are worse and very few are good. They company is being negligent and trying to cover up the issue and as consumers paying 100.00 dollars for 25lbs of dog food that's making our pets sick and costing us even more with vet bills. Orijen ignoring the real issue at hand. I just want to save some pets from illness or death because I can't imagine. Dog with health issues eating this food could kill them.</p>						

<a href="#">EON-336454</a>	9/20/2017 13:44	Nature's Domain Puppy Chicken & Pea	diarrhea in the puppies and their dam after opening a new bag of kibble. They had previously eaten three other bags of the same kibble - different lots - without any problems. All dogs had vet check within 6 days and were healthy. Normal formed stools were noted with other bags. Puppies already in forever homes are not having diarrhea. Dam also has been vomiting and has a very noisy stomach.	8	Weeks	Chinook	Dog	11	Pound

<a href="#">EON-336011</a>	9/18/2017 18:40	Grillerz 3LB. Bag of Bones	Approximately July 25, 2017 i purchased a large bag of dog bones from Tractor Supply Co. in Jackson, CA. They were the "Grillerz" brand manufactured by "Scott Pet Products". One of my dogs were chewing on one of the bones that evening when she started choking and gagging. I pulled the bone from her mouth and swept her tongue with my finger. In addition to finding small bits of bone, there was also a small metallic object. It appeared to be lead buckshot. I called the company to inform them the next day. I spoke to a woman who seemed, not to be surprised. I sent her photographs, at her request, showing the bone and lead, as well as the Lot # on the bag. She offered to replace the bag. I did not find that reasonable since I was cautionary about their product and requested a refund of \$10.00. I waited about 30 days and never received any communication. I called again and the same woman now said I needed to provide a receipt or proof of sale. I was extremely upset that now this information is being requested. I was told again, that a check would be sent. To date, no communication has been received. I am also very alarmed about their lack of interest or concern. The statement "well, things like that happen" is not very assuring, that my pets are safe consuming their products.						

<a href="#">EON-335943</a>	9/18/2017 10:00	Nutro Max Grain Free Adult Recipe with Pasture-Fed Lamb	<p>Hello,</p> <p>I have a concern on a product we purchased for our dog. (b) (6) is a small yorkie poo and has allergies to chicken and grain. He has been sick for the past 3 to 4 weeks with severe scratching and losing hair in small clumps. My daughter took him to the vet and paid \$600 for medications and shampoo (and of course the tests and vet visit). (b) (6) had a staph infection. He is still breaking out with blisters in his ears. Yesterday we realized the food she bought, which the ad stated it was made with Lamb and was grain free and chicken bi product free, was extremely misleading. The first ingredient was Chicken meal and the 4th ingredient is Chicken fat! Lamb isn't even in it until the 6th ingredient!! There is even a picture of a lamb on the front Poor (b) (6) has been having a horrible reaction to the food which was definitely mislabeled!!! I have attached pictures of the food bag. Is there anything we can do??? We are extremely upset. We feel totally mislead with false advertising. and now have a sick puppy. The food is Nutro MAX Grain Free Adult Recipe with Lamb</p>	3	Years	Terrier - Yorkshire	Dog	12	Pound

It exploded with such force that the top tab of the can sliced open my left middle finger. The can then fizzed and bubbled over for several minutes, and the contents of the can smelled terrible. I went to the doctor to treat my finger. My MD prescribed me antibiotics, treated the wound, and advised me about symptoms of botulism in the event that the food was contaminated by this bacteria. The use by date is 28JUL20 and the lot # is 12TKS1.						
<a href="#">EON-334828</a>	9/12/2017 10:28	Hartz Oinkies Pig Skin Twists Stuffed with Bacon Flavored Crunchy Middle	I have (b) (6) a Hartz Oinkies Pink Skin Twist on 9/8 as a treat. As a direct result, (b) (6) began vomiting hours later nonstop. She was having bloody diarrhea and dehydrating fast. She couldn't even keep water down. I looked online and noticed a site "Hartzvictims.org" which stated many issues like this have arisen from pets eating these products. Animals has seized and died. I brought my dog to the ER and she had to stay overnight receiving fluids and IV antibiotics. She was previously 50 pounds and had lost weight and suffered as a result of this issue. She could have died. Please, please get all Hartz products off the shelves. They are killing animals.	2	Years	Mixed (Dog)	Dog	45	Pound

EON-334644	9/10/2017 18:04	Exer-Hides Rawhide Twists with Chicken	<p style="text-align: center;">Previous History:</p> <p>(b) (6) is a 2-year-old spayed female mixed breed dog presented to (b) (6) Veterinary Medical Center on 8/29/17 for anorexia, vomiting, lethargy, and weight loss. (b) (6) has a two week history of vomiting, anorexia, lethargy and weight loss. She has lost 0.3 kg in that time.</p> <p>(b) (6) was seen by her primary veterinarian on 8/21/17 for vomiting that began on a plane ride the past week and continued throughout the weekend. She had not eaten for the past 2 days, was lethargic, and drank small amounts of water. She was treated with Cerenia (injections every 3 days), probiotics (7 days), and her food was switched to canned Hill's I/D.</p> <p>(b) (6) was seen by her primary veterinarian on 8/25/17 because she still was not feeling well. At this time, a CBC and serum chemistry were performed. CBC showed a leukocytosis (17.96) with neutrophilia (12.62) (unknown bands). It is noted that lymphocytes were high normal at this time (4.19). Chemistry showed hypoglycemia (39) but was otherwise unremarkable. It is noted that BUN and Cr were normal (16, 0.7). (b) (6) was treated with Ceftiofur (Naxcel) and Dexamethasone injection and Nutri-Cal.</p> <p>(b) (6) presented on emergency to her veterinarian on 8/27/17 for continued lethargy and vomiting after drinking water. She was hospitalized and treated with IV fluids, Dexamethasone, Cerenia, and Cefazolin IV. A CBC and serum chemistry were performed again on 8/28/17. CBC showed a more severe leukocytosis (19.59), more severe neutrophilia (16.08)(unknown bands). It is noted that lymphocytes were mid-range (2.06). Chemistry showed continued hypoglycemia (57), elevated BUN (35) with normal creatinine (0.6), hyponatremia (137), hypokalemia (3.2), hypochloridemia (101). Abdominal radiographs were performed on 8/28. Survey radiographs showed mildly dilated stomach. Barium study showed barium remained in stomach for at least 6 hours before moving out into the small intestine.</p>	2	Years	Mixed (Dog)	Dog	1.5	Kilogram
------------	-----------------	--	---	---	-------	-------------	-----	-----	----------

			<p>(b) (6) was seen for a suspect ear infection with a head tilt on 8/12/17 by a veterinarian in (b) (6) (her family was traveling there) that responded to topical therapy.</p> <p>(b) (6) had an umbilical hernia repair and deciduous tooth removal. (b) (6) is spayed. She is up-to-date on vaccinations.</p> <p>Hospitalization at (b) (6) Veterinary Medical Center:  8/29/17 (day of presentation): (b) (6) was lethargic on presentation with estimated 5% dehydration. After-hours CBC/chemistry showed mildly decreased white blood cells (5.4) with increased % of neutrophils. Elevated BUN (72) with normal Cr (1.1), hypoglycemia (46), hyponatremia (136). (b) (6) was treated with IV fluids + 5% dextrose to rehydrate with frequent blood glucose monitoring.</p> <p>8/30/17: (b) (6) was transferred from Emergency Service to Internal Medicine (care of (b) (6)). Baseline cortisol was elevated (7.78). Bile acids were normal (pre 1.4, post 12.7). (b) (6) had eaten a small amount of baby food overnight and glucose stayed average of 70. CBC and chemistry were repeated - mild normocytic, normochromic anemia (31.8%), normal WBC count, lymphocytes were decreased, mild hyponatremia (138), potassium low-end normal 3.9, hypochloremia (110), hypocalcemia 9.6, hypophosphatemia 3. Urinalysis showed USG 1.010, pH 6, trace protein, glycosuria (100), small ketones and 1 granular casts. Abdominal ultrasound was performed which was unremarkable. (b) (6) in's and out's fluids were matched overnight and glucose monitored.</p> <p>8/31/17: (b) (6) did well overnight with good appetite and energy level. Renal panel showed mild hyponatremia 140, hypokalemia 2.9, decreased HCO3 16, hypocalcemia 9.4, hypophosphatemia 2.8, azotemia (BUN 20, Cr 1.9). (b) (6) was started on potassium phosphate supplementation added to her fluids. (b) (6) in and out's fluids were matched overnight and glucose monitored (avg 110) overnight.</p> <p>9/1/17 (b) (6) did well overnight with good appetite and energy level. Urine output still polyuric (avg 20ml/h). Leptospirosis titers were all &lt;100. CBC and serum chemistry</p>						
--	--	--	---	--	--	--	--	--	--

			<p>showed mild leukopenia (5.44) with normocytic, normochromic anemia (23.2%), neutropenia 2 with slight toxic granulation, hypokalemia 3.5, hypocalcemia 9.5, hypophosphatemia 2, azotemia (BUN 19, Cr 1.9), hypocholesterolemia 114. Enrofloxacin was added 15mg IV Q 24h in addition to unasin. Continued therapy with glucose supplementation and potassium phosphate with matching ins and outs.</p> <p>9/2/17: Repeat CBC and chemistry: normocytic, normochromic non-regenerative anemia (24.9%), normal leukocytes and neutrophils with rare dohle bodies and basophilia indicating toxic changes with bands 1.07, hypophosphatemia 2, mild azotemia (improved) (BUN 16, Cr 1.3), low cholesterol 109. Normo to hyperglycemia so discontinued glucose supplementation. Continued other therapies as previously described. (b) (6) continued to do well clinically with good appetite and energy level. Maintained weight 1.5kg.</p> <p>9/3/17: Renal panel: hypocalcemia 9.5, hyponatremia 139, BUN 10, Cr 1.1 (improved), hypochloremia 108. (b) (6) had low glucose again and so was started on 2.5% dextrose supplementation in addition to her other continued therapies. (b) (6) continued to do well clinically with good appetite and energy level. Maintained weight 1.5kg.</p> <p>9/4/17: CBC: WBC WNL with slight toxic changes to neutrophils, bands decreased 0.345, lymph 1.97 with reactive lymphs. Renal panel: hypocalcemia 8.8, BUN 14, Cr 1.3 (increased), hyponatremia 140, hypokalemia 3.8. Increased fluids overnight to 15ml/h. Still matching ins and outs average of 15ml/h. (b) (6) continued to do well clinically with good appetite and energy level. Glucose range 87-97 overnight. Maintained weight 1.5kg.</p> <p>9/5/17: CBC: hypochromic, macrocytic regenerative anemia 26.3%. Normal WBC with no bands. Lymph 2.11. Chemistry: hypokalemia 3.7, hypocalcemia 8.8, azotemia (BUN 21, Cr 1.9, increased from previous), hypocholesterolemia 113. (b) (6) continued to do well clinically with good appetite and energy level. <a href="#">EON-334635</a>	9/10/2017 15:12	Evanger's Nothing but Natural Jerky Treats Natural Venison with Fruits & Vegetables	<p>Evanger's Dog &amp; Cat Food Co. Dog Jerky Treat (Natural Venison) dated best used by 3/5/2018 purchased off Amazon or directly through the manufacturer. The entire bag of treats had white &amp; green mold on all the pieces. I emailed the manufacturer replied with: "Thank you for contacting Evangers regarding this issue and for being an Evanger. You are correct that the treats are not supposed to be white or moldy. The NBN jerky treats do have a high retained moisture and are shelf stable because we bind the moisture molecules. This is the more natural way of making a meat based dehydrated treat rather than an extruded treat which are loaded with carbs and not so much meat. The lot number you provided us is great. It would allow us to see when the treats were made, how they were processed, where they were shipped to, where the raw materials came from, we can pull retained samples and other records." NEVER REPLIED BACK CONCERNING OTHER DOGS SAFETY. HOW MANY OTHER BAGS WERE SOLD TO OWNERS WHO THINK WHITE ON TREATS IS NORMAL?</p>						

<a href="#">EON-334634</a>	9/10/2017 15:12	Darwin's Natural Pet Products Natural Selections Turkey Meals for Cats, Chicken Meals for Cats, Duck Meals for Cats	This kitten was fed Darwin Natural Selections Chicken Meals for Cats, Darwin Natural Selections Turkey Meals for Cats, and Darwin Natural Selections Duck Meals for Cats. She died unexpectedly on (b) (6). I then lost another kitten on (b) (6) who was necropsied by (b) (6) and tissue cultures showed a severe Salmonella infection. When I realized that the food was the source of the infection that killed my 2nd kitten I contacted Darwin Pets. I had none of the food left to determine the Lot number and Darwin Pet Products had no food left from that production run to test. All of my cats ate food from these three products for 2-3 months. Because the food from Natural Selections Duck Meals for Cats tested positive for Salmonella by (b) (6) I believe that there is a good possibility that the other varieties were also contaminated. But I had none left to test. All I know is that the Turkey and Chicken were the bulk of what my two kittens ate who died. I just don't have the lot number for those two products. It was purchased at the same time as the Duck which I have already filed a report on.	3	Months	Japanese Bobtail	Cat	3	Pound

<a href="#">EON-334528</a>	9/8/2017 19:00	Wellness Core Grain Free Ocean Whitefish, Herring Meal & Salmon Meal Recipe	Got new bag of dog food from Chewy.com. Gave Dog #1 (b) (6) the new dog food this was at 6pm. At 9pm (b) (6) went outside and started with Diarrhea, that continued ever 15 minutes, at 930 she went out for diarrhea and threw up. The diarrhea continued every 15 minutes for 2 hours, then it went to every 45 minutes all night long. She was going mostly clear with a blood, At 638am it was the last time out. We fell asleep until just before 9 when she needed to go out. She came back in bloody. I gave her two droppers of water, within 2 minutes she threw that up. out the door we went to the VET hospital 09/06/2017. She was at the vet hospital until 8pm that night. The could find nothing wrong with her despite xrays, numerous tests, blood tests, stool tests and xrays. I fed Dog #2 (b) (6) at 6pm on 09-06/2017, She had many trips outside with very soft poop, she eats less than (b) (6). The next AM she had no poop left. I fed (b) (6) at 6pm on the 7th by 9pm she had to go out and had diarrhea, this too continued every 15 minutes and at 930pm (b) (6) threw up all the food in her belly and had diarrhea too. I had some dog immodium and gave it to her every hour and put droppers of water in her mouth SUPER often. She went out every hour or so with blood coming from her anus and nothing but blood and mucus. Today is 09/08/2017 at 333pm. (b) (6) has stopped going outside all the time for diarrhea. she has been laying around sleeping all day long. (b) (6) is also just sleeping most of the time. They usually wag their tails a hundred miles an hour and will love on anyone that is near. They are both listless.	2.3	Years	Shih Tzu	Dog	9	Pound
<a href="#">EON-334514</a>	9/8/2017 17:20	Darwin's Natural Pet Products - Natural Selections - Duck Meals for Cats	Kitten (b) (6) developed diarrhea and bloating beginning around (b) (6). He died on (b) (6) and his body was taken to (b) (6) Diagnostics Lab in (b) (6) for necropsy. The necropsy showed that he died of a severe bacterial infection that went systemic. Cultures were done on liver tissue samples and the pathogen identified was Salmonella, Type B, Typhimurium. I then sent sealed food samples of the only two foods that my kittens were eating, The Darwin food tested positive for Samonella of the same type as that which killed my kitten. I also lost a 2nd kitten named (b) (6) who was (b) (6) months of age. She had no symptoms and died unexpectedly for no apparent reason. I did not have her necropsied.	2.5	Months	Japanese Bobtail	Cat	3	Pound

<a href="#">EON-334457</a>	9/8/2017 14:32	Greenies Dental Treats Regular 25-50 lb	I purchased one - 18 pieces pkg. of Greenies Regular dental treats on 8/24/17 and opened it on 9/03/17 and noticed what appeared to be contaminations on the individual treats. Description: 1/4 to 1" wide by 1/4" deep depressions surrounded by circular and discolored rings and some fungal looking white "fuzz" growing from these areas. I returned to the pet food store and showed the item and receipt to them on 9/07/17 - the delay in returning was due to looking for the receipt and having the time to go to the store. I was told to notify the manufacturer and the clerk telephoned them and I spoke with them giving lot number and all required, by them, information. They agreed to issue a refund. I informed them that I was an M.D. and was going to notify the FDA about this problem in order to protect other pet dogs from this contamination. I also declined a coupon for the same product even from another batch as both were made in the Kansas plant and I was concerned that there might be a problem at the plant so I accepted the refund.						
<a href="#">EON-334278</a>	9/8/2017 9:00	Orijen Regional Red Biologically Appropriate Dog Food	My dog began throwing up her kibble intact and undigested one hour or so after every feeding. She was losing weight and obviously low energy. She has been having issues throwing up after eating for several months prior to this becoming severe. I noticed when I stopped feeding her the kibble and moved to a cooked diet of chicken and rice she would do fine. When I went back to the kibble the issues resumed. I started doing some research and believe I know what the issue was. Orijen used to be 100% sourced in Canada. Recently they moved some of their operations to Kentucky in the USA. There was no way to know this change unless you read the bag front to back every time you purchased - which I did do initially. When the food was sourced in Canada we had no issues. Ever since the move it is obvious the USA plant is doing something different. There are MULTIPLE blogs by people posting on truthaboutpetfood.org that state ever since the change their dogs are having the EXACT same issues. This food is clearly either contaminated or using crap in their kibble, probably to save money. I notice the price hasn't gotten any cheaper. Of course, the last part is all sheer speculation on my part. What I know for sure is this dog food is no good and needs to be investigated.	2	Years	Corgi - Welsh Pembroke	Dog	23	Pound
<a href="#">EON-333867</a>	9/7/2017 3:40	Pedigree Choice Cuts in Gravy Grilled Chicken Flavor in Sauce	Pedigree ChoiceCuts in Gravy was divided between them and mixed with their solid dog food. This has been done before with no health issues. This time we ended up with 3 sick dogs. 2 more than the other. Bloody diarrhea many times a day with awful decomposed smell and vomits. This has been a nightmare. Their stomachs movements can be heard and medication has been given. As I write this report their status is the same for the past two days.	4	Years	Other Canine/dog	Dog	10	Pound
<a href="#">EON-333865</a>	9/7/2017 3:20	Pedigree Choice Cuts in Gravy Grilled Chicken Flavor in Sauce	We red the dog some Pedigree Choice Cuts in Gravy, they have eaten them before as treats mixed with solid dog food. This time they have had horrible diarrhea for two days. Non stop stomach pains and their stomach can be heard. It has gotten to the point that the poop seems to contain blood and smells terribly decomposed. As I write this he is still in the same condition.	7	Years	Chihuahua	Dog	10	Pound

<a href="#">EON-333262</a>	9/1/2017 13:56	Taste of the Wild	Dog became lethargic, then had pain. Quick vet check up (sans blood work) did not reveal a cause. (she had not been wanting to eat her food and had had some vomiting and diarrhea which was unusual for her, but we did not realize at the time that the food was the cause, we thought she was not eating because she didn't feel good) Then she go sicker, the trip to the vet with blood work revealed she was in kidney failure. We and the vet were baffled. He said she must have eaten something toxic, but being as she is a house dog, and basically with us 24/7 we could not think of a thing she might have eaten that was toxic. The only explanation was toxic ingestion. The vet made a 48 hr treatment plan to help her but said with the level of kidney damage she would only live another 4 to 6 months. 10 hours later we were called to come back to the vet, she was dying. We had her euthanized while we were with her. She was only 8 years old.	8	Years	Siberian Husky	Dog	40	Pound

			<p style="text-align: center;">Information</p> <p>My Shih Tzu, (b) (6), has gone into convulsions on eating this food. I did not associate his problem with the food until I had fed him several times. After the 2nd event, I stopped trying to feed him your food, not because I suspected it, but because I became worrisome and tried to make sure there was nothing I was doing to cause the problem. About 4 weeks later, AND NO FURTHER EPISODES, I TRIED TO REINTRODUCE him to the new food and within minutes of him consuming your food, he had another attack. That is when I concluded your food must somehow be causing the problem. No incidents before your food, no incident when I took the food to back away, but when I fed him your food again, another incident. This seems to coincidental not to be somehow connected to your food. I bought 2 cases and have only used 3 cans. I have attached photos of my order from CHEWY.COM</p> <p style="text-align: center;">The results of this submission may be viewed at:  <a href="https://www.instinctpetfood.com/node-(b)(6)">(b) (6)</a></p> <p style="text-align: center;">THIS WAS THERE REPLY</p> <p style="text-align: center;">Hi (b) (6)</p> <p>I have spoken to my Research Team regarding the experience you are having and they have not heard of this issue occurring with our food. We would recommend conferring with your trusted veterinarian.</p> <p>We do have a 100% Satisfaction Guarantee that covers all of our foods. <a href="#">EON-332682</a>	8/29/2017 19:36	Pedigree Choice Cuts in Gravy	<p>She had a reaction that began vomiting, so we took her to the vet. The vet said she had some kind of liver enzyme issue probably from ingestion. When we brought her home we changed foods to what vet office had with no issue. Two weeks later we ran out of the food that we purchased from the vet. Then, I returned to our normal food (Pedigree) and our pet started vomiting again. We feel that link between the first sickness and the second sickness maybe because of the Pedigree Food.</p>	1	Years	Dachshund - Miniature	Dog	15	Pound

<a href="#">EON-332664</a>	8/29/2017 16:24	Primal Pet Foods Primal Patties for Dogs Turkey & Sardine Formula	<p>I purchased multiple bags of Primal dog food frozen raw patties, for the first time ever (finally made the switch to raw). Went through the first bag, chicken, no issues. Got half way through the second bag of Turkey &amp; Sardine when while feeding my pups, as i went to place a patty into one of their bowls, I noticed something slightly reflective in the light. Thinking something tiny fell on it, I went to pick it out, only to have a HUGE piece of a plastic bag pull out of the middle of the patty! It's maybe about a 1/3 of the size of the patties, which are NOT small. My pup definitely could have been injured by swallowing this. It's giant in relation to food that they swallow.</p> <p>Went on the Primal website and submitted an email via web form to them about the issue. Also posted on their Twitter and Facebook pages. So far their responses have not offered an apology nor will they commit to doing a recall which I would think would be essential.</p> <p>While on their Facebook page, found 2 other people who also found plastic in the food as well. Have only been able to confirm with one of them that it was the same meat type, Turkey &amp; Sardines, but his was the bag of Nuggets while mine was the bag of Patties.</p> <p>So far the communication with the manufacturer has been unsatisfactory in my opinion for what's been found, by multiple people. They have yet to apologize and won't reply to my inquiry about them doing a recall. They don't seem very concerned and are acting like this is a normal thing for them. I'm sorry but I feel that finding something in food they are responsible for that could kill a pup should be treated more seriously, and since they don't seem to care, I'm hoping reporting this here will help. I also understand things do happen during manufacturing but at a minimum, they should be warning their customers.</p> <p>Have also shared to all of the dog border collie and raw feeding facebook groups I'm in so folks can keep an eye out.</p>

EON-332419	8/28/2017 13:40	Husse	<p>Dear Sir, I have done dozen emails with FDA for over than 1 year.( sse the last one below)</p> <p>I am the Husse California Master, a pet food company and I have received for over 2 years prohibited ingredients, several prohibited bags, 10,000 thousand samples with no US measurements ( measurements are only in kg and cup/kg) and illegible . and there is no information about the manufacturer on bags. Issues informations had been made to the Franchisor ( Trademark INT PTT AB, husse) from Sweden, for over 2 years, FDA has the information since September 2016 ( 1 year).</p> <p>Issues are penally reprehensible . I have hundred of emails, pics of the bags, copies of entries, copies of errors stickers labels, on copies of documents , emails we informed the Franchisor who shipped the goods anyways" and does not care about US laws", US Franchise Masters mails and Franchisees mails who received the goods and did not destroy because the Franchisor" imposed to sell because they have commissions."... USA is not a jungle country and cannot accept a foreigner company to ship "anyways because the business. FDA and USA regulate the laws and I DO trust in it. I personally stop to import on January 2017, but other US Husse Masters are still importing, still selling the goods with issues to their franchisees, who are still selling the goods to the poor customers , who are not informed about anything!!</p> <p>Will my request, I am doing today ,be with no solution, no action from FDA or other USA department?</p> <p>Will my request get again and again a simple answer by email ( as I have got for one year), while the Swedish Franchisor is still shipping again and again their goods, knowing they do not respect the US Laws labelling or whatever?</p> <p>Might I have the correct person , who will take the responsibility to STOP this illegal process??!!</p> <p>Best regards, (b) (6)</p> <p>Dear (b) (6)</p>						
------------	-----------------	-------	--	--	--	--	--	--	--

--	--	--

Thank you for your last email,

That said, I am very surprised and would like you to answer me please to my questions below:

- You wrote : "Our routine imports process is that products go through an initial screening, and during that screening if it's not flagged in the system then it is generally allowed to be imported"

So that means : If the person (s) who had made the initial screening , had made correctly his job and had found out that the Menadione Sodium Bisulfite ( MSB) was prohibited ( and I sent you the picture of the bag which is clearly on) , the good would have been removed before its first entry in the US, correct?

Same thing about the Hydrolyzed animal protein, ingredient not identified,

Same thing about the type of vitamin D ( it is not indicated if it is D2 or D3)

Same thing about the ingredients which must be listed in descending order of predominance by weight , which it is not the case on several Husse products

Same thing about the absence of the company name of manufacturer ( !)

Same thing about the net weight ( net quantity of content)

Same thing about lbs and kg, Us/ cup and kg/ cup

Same thing about the name of " Exclusive Urinary " which would have been reviewed BEFORE the importing/marketing the product.

So that means also , as somebody missed it BEFORE, and as FDA had been informed in September 2016 ( so 1 year ago from now (!)), and as other U.S masters did not get this information, the Swedish company could continue to ship to USA, and U.S citizen might be poisoned ?

And most clearly, if FDA missed the first step, Companies from Europe could continue

--	--	--	--	--	--

--	--	--

to ship prohibited products ( and maybe narcotic?!! ) , with no worries for almost 1 year, only because the first step had been missed , and if even people like me , informed , informed and informed again??

THIS IS A NONSENSE

So, YES OR NO?

If yes, US Masters and US Franchisees could continue to sell these products.  
 IF not, US masters and US Franchisees need to be officially informed, because the European Franchisor still continues to ship ignoring all the U.S laws.  
 But who will forbids ? Laws? Who will enforce US laws? and when? 1 year from September 2016 = now!!

Someone missed the FDA screening process for sure, and consequences are dramatic because US Masters and US franchisees bought a franchise importing prohibited products for over 2 years. found out the issues later. and as they did not want to be against the laws, stopped to make the order of these products, lost money , lost customers and so lost their franchise investment ( several hundred thousand of dollars !!)

" If a violative product is allowed entry (e.g. it is in domestic commerce) and we discover that there is a violation we will follow up on the violation as our resources permit" Yes it was very easy to discover the violations, only if the initial screening had been made correctly!

"For example, a high priority risk item would be if there are deaths or illness of humans or animals due to an animal food" That means that you are waiting for a person or a pet to die to move, even if you have got these informations for 1 year??

"Items such as labeling violations, that may not cause an imminent health hazard, are often followed up with communication with the responsible company."

--	--	--	--	--	--

--	--	--

often followed up with communication with the responsible company.  
Labeling are informations , specially about lbs and US cups. This communication IS VERY IMPORTANT . 1 kg = around 2 pounds !! OUR US CITIZEN customers fed almost twice their pet BECAUSE this missing information and did check because unclear on the bags!

Please note that FDA does not issue fines for violations, and for someone to go to jail they must have committed a criminal action (such as lying to a federal agent. YES , " someone " ( specially the Swedish company ) were lying to a federal agent for 1 year, as the US Florida Master gave the informations about the prohibited ingredient, The Swedish Company did continue to export these prohibited ingredient and signed official documents (ATTACHED) Husse Trademark uses to complete this OFFICIAL Document " As far as the importing country authorizes the importation". please read it/

We informed Husse trademark that , for example , MSD was prohibited, and they continue to complete this document with fake information and ship to the US Borders!! So the answer is YES they made committed a criminal action such as lying to a federal agent with this document signed by them( and several times with several containers) , and so YES the US condemnation is JAil.. and as far as they are not in the USA, who might go to the jail? (b) (6) the first importer? The US Masters because the most of them continue to import prohibited ingredients? Franchisees because they are selling prohibited ingredients?

Or maybe ,because nothing had been done and as the initial screening , "nothing had been flagged at the system" :  
Husse Sweden can continue to ship from Europe to USA,  
US masters can continue to buy these products and sell to their franchisees  
Ans franchisees can continue as well to sell these products to their customers

On june 28th 2017, 3 more products had been found out as inapproved by the FDD, and had heed imported during 2 years : VERMI ARTRO and DIGESTION

--	--	--	--	--	--

--	--	--

and had been imported during 2 years : VERMIL, AVIRO and BIOLETON  
The franchisor wrote we had to give as samples and not destroy these products!  
Also, what 's about all the other samples, husse sales procedures is to give samples to prospects , and then we supposed to try to figure out if the pets like it?  
In this case, the customers make an order. The problem is that the samples have prohibited ingredients, 100% have no US measurement ( only in KG)?  
This sales system is still on live in several States as Arizona, Florida, New York, New Hampshire, New Jersey...!!

"Alternatively, State Agencies may issue fines for items such as labeling violations. "  
If FDA was not doing anything, might you give me please the address and phone number of the `State Agencies`, we will contact them/

In my opinion, FDA cannot answer with a simple mail , saying " it is not FDA fault" and let the serious pending issues with no solution .

Us masters, Us franchisees and customers need to be officially informed /

One more time. if it was not the FDA job. who suppose to relay the information, who must inform all masters, franchisees and hundreds of customers???

This franchise concept was based on the advices franchisees give to customers about nutrition! What can they do now? What can we do now??

--	--	--	--	--	--

Best regards

CVM Import Requests Good morning, Thank you again for the detailed information. Unfortunately at this time I am not able to comment further on FDA's follow-up actions on this product, as we cannot share internal follow-up information with others that are not the responsible party for a business. I am passing along the information you have provided and are discussing with the appropriate people in FDA to determine follow-up. Thank you, Sonya Lambkin Supervisor, Post-Market Compliance Animal Food Team  
FDA / Center for Veterina

<a href="#">EON-332327</a>	8/27/2017 9:44	Retriever Hi Protein	<p>(b) (6) was offered Retriever Brand high protein blend kibble. I noticed the kibble chunks looked smaller than normal upon pouring it in his dish. At first he refused to eat it, then slowly through the evening he ended up eating the entire bowl. That night in the middle of the night he started crying in his crate. (He NEVER does that) when I came out to check on him I noticed that he had vomited what looked to be even more than what I would expect his stomach to be able to hold. I took him out and cleaned up his mess. He ended up throwing up twice more outside and once more in his crate. After that he would only very reluctantly eat one bowl of the kibble a day, some days not even finishing an entire bowl. Usually he would eat 2 bowls (one morning and one evening) No other vomiting episodes for a while. When his kibble was getting low in his dog food keeper, I filled it with another bag of the same dog food. It looked a little better, not as small of chunks, but he still has been reluctant to eat it. This has been going on for about a month now. The kibble in his bin was getting low again yesterday, and I noticed I could see the small pieces of kibble again when I scooped his food. Last night in the middle of the night he started whining (NEVER whines at night in his crate) and when I woke up and came out to check on him he had explosive diarrhea all over the inside of his crate, the walls, and the carpet surrounding his crate. He had never had a bowel movement in the house before this... Not even as a puppy. I thought maybe the first vomiting episode after eating the smaller kibble might have been a coincidence, but after last night I KNOW it had to have been that bag of kibble.</p>	1	Years	Pointer (unspecified)	Dog	75	Pound

EON-332320	8/27/2017 0:08	Waggin' Train Chicken Jerky Tenders	<p>On (b) (6), I bought a bag of Purina Waggin Train Chicken Jerky Strips at Sams Club, located at (b) (6).</p> <p>Within hours, both dogs, a beagle and a tree walker coonhound, had vomited the treats up. Later, they both ate dinner, which is always a lean meat mixed with a pouch of their Purina dog food. No problems. Next day, fed treats to both dogs again, Noticed vomiting later that day. Stopped treats. They both ate dinner. Noticed the beagle having problems with rear legs as though he was having balancing problems and heavy, fast breathing. Took the beagle to the vet the next day, (b) (6). I told the vet of all symptoms he was having. The vet examined the dog briefly and stated that he believed that he was having problems with either arthritis or a bone spur in his hip/spine area. The vet injected Carprofen and gave me 75 mg tablets to give to my dog, a half tablet at a time, twice daily. The vet did not inform me of any side effects nor did he give me the Patient Package Insert. That night, my dog was in a lot of pain and cried all night long, which he had never done. I thought it was from the injection in the hip/spine area. I called the vet back the following morning and was told that I had to allow 4-5 days for the medicine to work. That week, my dog was still eating, not as much as normal, and was having a hard time walking. Because of his diminished appetite, I cooked him beef liver friday, (b) (6) which he ate. He even barked once, which he had not done all week, so I thought that he was getting better. Saturday evening, his breathing seemed worse, but he was still alert, but laying around. Also, saturday, we noticed a bad odor coming from his breath. and I attributed it to the fact that it was the medicine, and I stopped the meds. Also that day was the last stool he had, and there was more mucous than stool. By Sunday evening, he was much worse. He had stopped urinating that afternoon, but still drank water. He could not get comfortable in any position. Monday morning, (b) (6), the odor form his breathing was terrible. I was at the vets office at 6:45 AM. The vet examined my dog and said that he thought he may have a liver mass, and that he needed to get an IV in him, a catheter, do blood work, and get a chest xray. I called the vet at 11:30 am to check on him and was told that he was resting comfortably and that he was doing better. The vet called me at 1:30 and said that the xray showed what appeared to be a mss in his left lung. He instructed me to pick my dog up at 5:30 as they close at 7:00 pm, and to bring him back at 7:00 am the following day. We arrived at 5:25 pm. When the tech brought my dog to us, he was in much worse shape. There was absolutely no reaction to us. In fact, it was though he were blind. He could not stand nor walk. We left and took him to the VCA hospital in (b) (6). On the way there, we were stopped at the xit ramp for 5-6 minutes, and my dog died in my arms. We rushed to the hospital and got him inside where CPR was performed to no avail. A breathing tube was inserted and medicine was given to restart his heart, which did not work.</p>	9	Years	Beagle	Dog	41	Pound

<a href="#">EON-332319</a>	8/26/2017 23:20	Taste of the Wild High Prairie	(b) (6) slowly began refusing to finish her food, then started to have diarrhea and wetting herself more often (she did have issues with this on occasion after she was neutered). I attributed this to stress from a recent move and continued feeding her the same food I always have - Taste of the Wild. In the last week I noticed a significant loss of weight and reluctance to eat, so I gave her canned food. She was drinking a lot of water and peeing very often as well. She started vomiting her food up a few days ago, and also became quite lethargic. When I came home from work on Friday she stumbled to get up and had a difficult time opening her eyes. I rushed her to the emergency vet where I found out she was suffering from kidney failure. I had to put her to sleep that night. I watch her very closely and know that she had not gotten into anything that was toxic. I trusted this food and never thought to switch it. I was poisoning my dog and didn't know it.	7	Years	Retriever (unspecified)	Dog	50	Pound
<a href="#">EON-332301</a>	8/26/2017 19:00	Chef Toby Chicken Jerky, Golden Rewards Sweet Potato Wrapped with Chicken	Patient presented for annual exam. Owner stated that she had increased thirst and urination. Did bloodwork and a urinalysis. Found glucose in the urine without increased blood glucose. Repeated urinalysis and got same results. Also mildly increased ALP (liver enzyme) on bloodwork. Consulted with an internal medicine specialist and primary differentials included chicken jerky toxicity, Fanconi syndrome, and leptospirosis. Owner stated that dog receives a lot of chicken jerky products daily. Declined additional diagnostic tests.	1	Years	Chihuahua	Dog	3.5	Pound
<a href="#">EON-332294</a>	8/26/2017 17:20	Blackwood Puppy Food Growth Diet Chicken Meal & Brown Rice Recipe	My puppy was fed Blackwood Puppy Food. He vomited and had diarrhea. I thought it was because he was reacting to the new food; getting used to it. Then, I find shreds of plastic strips inside the Blackwood Puppy Food pebbles. It was as if a giant plastic bag was shredded and molded together to make the puppy food. I notified the company, Blackwood Puppy Food. They said to return the remaining food. I notified the store and the distributor of Blackwood Puppy Food. They said to return the remaining food. No one wants to talk about why there are strips of plastic in my puppy's food and no concern regarding the puppy's health. I request that Blackwood Puppy Food manufacturing process be investigated.	9	Months	Bulldog - French	Dog	22	Pound
<a href="#">EON-332143</a>	8/25/2017 14:20	Beneful Baked Delights Snackers	We started giving (b) (6) Beneful snackers two or three times a day as a treat in (b) (6). By (b) (6), she was drinking a large amount of water and sleeping a lot, unable to comprehend as well and not as stable when walking. We assumed she was just getting old. However, we decided to try and see if there might be another reason for her change in habits. After trying different things, we found that she was better after no longer giving her the Beneful Snacker product. I then checked with our vet to see if he had heard of other dogs having this problem and he had. I feel that Purina's Beneful Snacker would have killed our precious little girl. She is now almost back to her old self... still alert and a little more active. Purina probably cut her life shorter than it would have been.	16	Years	Spitz - German Pomeranian	Dog	14	Pound

<a href="#">EON-330716</a>	8/18/2017 16:32	Taste of the Wild	<p>We adopted (b) (6) from (b) (6), a local animal rescue here in (b) (6); where they exclusively fed Taste of the Wild brand dog food. She was there from August 2015, until May 2016, when we adopted her on May 4th, 2016. We continued feeding her the exact diet, Taste of the Wild, with varying flavors up until a few weeks ago. I would always try to get her the salmon variety, but varied all the flavors. We would supplement her food with some fish oil and coconut oil along with a supplement for her fur/skin, sometimes a bit of cooked egg in the morning.</p> <p>She has slight allergies, as her breed is prone to, and wiping paws after being outside at night, coupled with fancy shampoo and baths, she was a vibrant, healthy, happy baby puppy.</p> <p>Every other day, with dinner food, we would always give her a bit of the canned taste of the wild food. She ordinarily gobbles this down. She also will gobble down anything with that on it, so we normally sneak in green beans and carrots, potatoes, rice, "healthy stuff", a bit of the canned wet TOTW dog food, and then dry kibble. She'll eat anything with it. Her heartguard pill, raw boring carrots, etc, is gonna be gobbled if it had the wet canned food on it. She eats this every other day, since we got her in May 2016.</p> <p>In about July 2017, I noticed her eating less of her food, and her fur was getting flaky. Nothing in her diet had ever changed, no routine changed, nothing. She was just eating less and getting a little lethargic. I didn't understand it, I wondered if she had gotten into something outside, or what. We jog/run just about every morning, and she would actually stop and sit which NEVER happens...She's never varied in health of any kind ever before so I was immediately worried. I called the vet who asked what we were feeding her, what could've changed, etc. She told me to bring her in for a blood/stool test, and recommended a food change to see if that would help. She prescribed we do it gradually, from 1/3 of new stuff for a week, 2/3 old stuff, next week go half and half, and then the week next go full on all new stuff. I started this right away. (b) (6) immediately went for the new dog food, right away. Gobbled it. She would gingerly pick out the old TOTW kibble and leave it lay. Like, her bowl had probably what, I dunno, 50-100 kibble pellets in it, and she would go piece by piece and not eat the Taste of the</p>	5	Years	American Pit Bull Terrier	Dog	60	Pound

			<p>wild kibble. There'd be a little pile by her bowl. Then, on the wet food day, she completely ignored her food. Completely. It was bizarre, seeing how that was gobble day.... I was like, what the hell is going on. It didn't make sense, but then it clicked. She would eat the egg in the morning let the kibble lay, and I thought well, duh, it's way better than dry food, but I didn't connect that it could possibly be her food that's the bad thing. Lightbulb, and within two minutes of just googling Taste of the Wild, I was completely appalled and screeching like a lunatic. I started bawling like a nutbag, because, hello. I could've been killing her for weeks now. The Consumer Reports website speaks VOLUMES. Look at the submissions! Please! Something is WRONG with this goddamn dog food, and I cannot believe the company hasn't issued a recall nor any kind of anything. You trust them to feed your dog. Like, I couldn't believe it. I called them, wanted to send all my food I had back to them for testing, and they had a canned, robotic, liability type response for me. I spent \$50 some bucks at <sup>(b) (6)</sup> sending it all back to them. I doubt I'll ever hear anything. I don't even really care about the money, just. I can't believe if you think something is making your dog sick, that's how they respond. I understand customer service, I understand the general public being batshit crazy, but come on. Dogs are family members, and are legitimately DYING because of the product they're producing. If it were gerber baby food there'd be an immediate investigation. I don't mean to be the crazy lady screaming about her dogs, but goddamn it I will. TOTW's social media accounts keeps getting attacked, (and then deleted) and frankly I believe, rightly so. There's people on Facebook who are trying to spread the word, and little groups circulating on Nextdoor trying to spread awareness.</p> <p>Amazon has a little blip of complaints in the comments that I saw starting a big discussion. I think it's absolutely downright shameful that there has been no, ZERO response from TOTW nor pulling from shelves or anything. My local petstore isn't selling it anymore, and that was lovely to see. I urge you to please, please investigate this. I contacted my vet, the company that manufactures it, and the place we got her from. I don't know what one angry, heartbroken person can do, but, I can't just sit with gears turning while pets fall ill and possibly die. There's something wrong. Taste of the Wild isn't investigating it, or if they are, it's to cover their ass and not lose money/avoid a lawsuit. It's such a shame what matters to corporations and how food is produced nowadays and I just cannot believe I didn't see it sooner. All for the dollar bill at whatever cost or expense. We switched her to a local, small produced brand and are never looking back. It took about two weeks for her to recover, and I'm so so happy she's a big muscly beefcake of a dog. If she were elderly, or had a preexisting health condition, she would've gotten sicker. The reviews show it; smaller dog breeds are dying, less healthy doggies have died and are dying. She was ill, she was affected by this, but I'm just damn lucky I caught it before she was affected further. Please investigate this. PLEASE.</p>						
<a href="#">EON-330567</a>	8/18/2017 13:44	Wellness Core Grain Free 95% Chicken with Broccoli	<p>My husband fed <sup>(b) (6)</sup> a new can of food. It was the first can from the new carton we ordered on 7/21/17. Shortly after, he threw up 4 times and defecated on the floor. He is let outside regularly and has not had an accident since the first week I had him, 10 years ago. His stomach had to have been in bad condition as, like I said, he is let out frequently, and he also knows how to signal to go out.</p>	11	Years	Mixed (Dog)	Dog	22	Pound

<a href="#">EON-330355</a>	8/17/2017 20:20	Waggin' Train Chicken Jerky Tenders	<p>On July 10th, during Amazon Prime Day, I saw a "lightening deal" for chicken jerky treats from Purina. I purchased the treats, and then looked at the website and saw they were "reformulated" and only had two ingredients. Guaranteed safe. I received the product July 12th. I read package directions and although it said my dog could have 3 treats/day, I feed him a very healthy diet and expensive food (limit treats) and only gave him one every other day. I started that on July 13th. I noticed he was drinking more water than normal, but attributed it to the heat. On Aug 6th I fell asleep on the couch after prepping for my son's 1st birthday party to find my dog had made a bloody stool on the hardwood floor (he has NEVER had an indoor accident) and had thrown up over 25 times in his own bed, and all over the house. His entire body was blood red and he had blood in ears and anus. Vomit had blood. His entire body was flushed red and he was exhibiting strange neurological symptoms (rolling head on floor). He was having trouble getting up. Was not eating. I crated him because guests were coming over, gave him oral hydration, and made sure he was not stressed by party guests. He seemed tired but ok. When I came back to check him 30 minutes later he had thrown up bile multiple times in his crate and continued to gag and roll his head on the ground. I then took him immediately to an urgent care facility. I was worried he had been bitten by a spider or snake or been poisoned. His hair was falling out and was unable to stand for long periods. Blood work showed liver enzyme ALT was 467 (normal 125 max) and he had blood on stool exam and was dehydrated. He had to be kept overnight and monitored due to dehydration and pain. Needed IV fluids, 2 bags. Potassium injection. Cerenia. Famotadine. Sucralate. Diphenhydramine. Metrodinazole inj. and was stabilized. He was released to me the next day on restriction. I couldn't determine ANY changes to diet or any poisons in our house or yard (we have small children and all chems are locked in cabinets). We do not use any poison baits or poisons in yard. He is an inside dog.</p> <p>The next few days I watched him recover and it was not until I opened the pantry and saw the Purina Waggin Tails treats I realized this was the only change in diet. I looked through consumer affairs and found HUNDREDS of reports. I contacted purina and they said they were sorry, sent me a check for the purchase price, and wanted the treats returned (no way). They said they "did not believe they were at fault."</p> <p>Took dog to vet today. Labs ran. Chem is back to normal. Dog has fully recovered. Vet agrees there is a direct cause and effect between these treats and the liver problems. A much smaller or older dog likely would have died. If I had given treats as directed on bag my dog would have died. At this point, total vet bills are over \$900.</p> <p>This is a DIRECT concern for the safety of animals (or a child who may eat these things). I have saved them and suggest you test them.</p>	4	Years	Mixed (Dog)	Dog	67	Pound

<a href="#">EON-330345</a>	8/17/2017 19:32	Reptilinks	<p>Company out of Blanchester, Ohio named Reptilinks sells a frozen raw meat product that is vacuum sealed in a plain plastic bag. The product has no labelling at all, (no logo, intent to use, ingredients, warning: not for human consumption, packaged on date, Warning raw food, or any other lettering on the packaging.) When asked to return this item, due to it not being vacuum sealed clearly packaged with the least regard, and no dry ice. I was offered a label to send it back. The package was sent back to what seems to be the owner's home address. The product was said to not be "resellable" when it returned despite following all packaging protocols, and receiving a picture of the items, with frost and packaging in the picture. The owner admitted to wanting to resell the product despite it being a frozen raw meat product that was shipped on two separate occasions and was admitted to be faulty. The product was returned because it was bad. I do not believe this company is following proper FDA protocols such as labelling, handling, false advertising, and misleading it's consumers. Animals consuming and humans handling this product could be subject to poisoning due to this negligence. Thank you.</p>						
<a href="#">EON-329995</a>	8/17/2017 10:56	Retriever Hi Protein	<p>So here goes!!! The dreaded post that I have been trying to make for a few days. I just couldn't get my thoughts and feelings compiled until now. As most of you know, one of my rescue dogs (b) (6), was rushed to (b) (6) Emergency Vet Clinic this past Friday night very weak, dehydrated, lethargic, bloody stool, abnormal body temp etc. She was in bad shape, fighting for her life. Based on her labs, the diagnosis was leaning towards Addison's disease or Leptospirosis. She tested negative for Addison's disease over the weekend, but we had to wait until Monday for her Leptospirosis results. I racked my brain trying to think of what could have made her so sick, a mushroom, frog, etc. Over the weekend, I was cleaning out food bowls, water bowls, disinfecting etc just in case it was Leptospirosis. When I opened a brand new bag of dogfood, I found mold all in the dog food as well as on the top of it. My mind immediately thought about (b) (6). I left the bag there and opened a new bag that was ok and free of mold. As I went into one of my fenced in areas, I found one of my precious babies, (b) (6), laying beside the food bowl, dead!!! He was only 5 years old. I freaked! Looking back a few feedings ago, I fed them out of a bag that seemed perfectly fine until I got to the bottom of the bag, it was all molded!!! I immediately threw it away, praying that my dogs didn't ingest any molded pieces. On Monday morning, (b) (6) was transferred to my regular vet (b) (6) Pet Hospital, where she tested negative for Leptospirosis. I immediately started putting the pieces together and realized that the only other diagnosis that she could have based on her labs and liver and kidney functioning was some type of toxin/poisoning. (b) (6) was diagnosed with Aflatoxin, due to the high levels of toxins in the moldy dog food!!! Three weeks ago, my completely healthy 14 year old chihuahua (b) (6) was found dead. At the time, we thought his heart gave out on him because of his age, but (b) (6) ate that dog food too!!! My heart is absolutely shattered and this has been an absolute nightmare for me! My babies were innocent precious angels! (b) (6) is still in hospitalization at the vet. She has shown some improvement, but still has a long ways to go. She had so much damage to her liver and kidneys, it is a slow and scary process. Her lab results today are still concerning even though she looks better clinically. Please pray that she can recover from this. I have contacted Tractor Supply to pull the dog food from their</p>	3	Years	Chihuahua	Dog	10	Pound

			shelves and they are contacting the buyer to investigate. I wanted to share to warn others in case other dogs are symptomatic like (b) (6) was. I also don't want others to have to go through what I've been through. PLEASE check your dog food before feeding. My heart is broken for (b) (6) and (b) (6), but (b) (6) is still fighting to pull through this. I have no idea how long she will be hospitalized there. It depends on her little body and how quickly she can recover from the high levels of toxins in her body and the damage to her liver and kidneys. Vet reports can be obtained for further research. I also still have the contaminated bags of dog food as evidence, as well as pictures. I have spent over \$1500 in vet bills since Friday (b) (6) and (b) (6) is still at the vet accumulating charges. All of this information is documented. I have lost 2 of my beloved rescue babies and I feel a tremendous amount of guilt. They were both fixed, heartworm negative and completely healthy with no prior health issues at all. I am sick over this!						
<a href="#">EON-329732</a>	8/16/2017 21:32	Reptilinks	Came across a company called Reptilinks. Purchased a "Starter pack" for my store to sell. The product is supposed to be frozen meat sausages meant for pet consumption. Product arrived half thawed and not vacuum sealed as advertised. I contacted them about it and they agreed to take it back for a refund. They made me go and purchase 20lbs of dry ice, pack it per their instructions and sent it back. The address looks to be the owner's home. They refused to refund me as the product is not resellable. Frozen food that was shipped twice thawed out should not be "resellable." I feel as though I was ripped off. I also do not believe their practices to be healthy for human, and/or animals. Also do not believe the product to be made with proper food handling protocols.						
<a href="#">EON-329726</a>	8/16/2017 19:40	Friskies Tender & Crunchy Combo	After buying this product for the first time- within twelve hours, I noticed my cats were throwing up, having abnormal bowels, didn't want or like the food. This is very abnormal for them to have abnormal eating problems. Shortly after, I noticed that (b) (6) really wasn't acting right. He was in a dazed state, lethargic and was eventually brought to the emergency veterinarian at the (b) (6) Animal Hospital. (b) (6) was an extremely lovable cat who was filled with energy and he had none. He was admitted with little chance of survival. However, he was given a successful blood transfusion and survived! He was extremely dehydrated, iron deficient as well as very low red blood cells. He did not get into anything unusual. He is home now thankfully but I am worried about this happening to other pets!!!!	1	Years	Domestic (unspecified)	Cat	8	Pound
<a href="#">EON-329725</a>	8/16/2017 19:40	Nutro Wild Frontier Adult Cold Water Recipe with Salmon	Purchased a 24 lbs bag via Petco auto delivery it was delivered on July 5th, 2017. I had dog begin to show signs of illness within 2 weeks and the others within 3 weeks and then I purchased a 4 lbs bag to supplement as the next auto-ship was not going to come in time. The dogs all had vomiting and bloody stool. 2 Had severe pancreatitis. When all 5 of my dogs became ill the Vet concluded that it would have to be the food causing the illness. By the time we picked up our fourth dog there was another dog at the Vet with the same symptoms who had been eating the same brand of food. NUTRO!						

<a href="#">EON-329721</a>	8/16/2017 18:56	Nutro Wild Frontier Adult Cold Water Recipe with Salmon	Purchased a 24 lbs bag via Petco auto delivery it was delivered on July 5th, 2017. <a href="#">EON-329709</a>	8/16/2017 17:20	Taste of the Wild Southwest Canyon Canine Formula with Wild Boar	The past few months I have been feeding Taste of the Wild Southwest Canyon Canine Formula to my dog. He would no longer finish his meals or even eat and earlier this month he stopped eating the food at all. He actually became quit ill and in the past week I ran up a \$1000.00+ plus vet bill getting x-rays, an ultrasound and lab tests trying to figure out what was wrong. He had elevated liver enzymes and the vet diagnosed him with ulcerative g-i mucosal disease. I have been feeding him a homemade diet since the diagnosis and he is eating and feeling much better. Today I read about the problems others were having with this dog food and it mirrored my dog's issues. I am going to contact the manufacturer. I feel the dog food caused all the problems since they are resolving by just taking him off this food. He has not taken any meds because I did not want to stress his liver further. This food needs to be recalled so no other pets and owners have to go through this distress and expense.	11	Years	Pit Bull	Dog	48	Pound	
<a href="#">EON-329503</a>	8/16/2017 10:44	Whiskas Temptations Chicken Flavor	I have a bag of pet treats which I think may be contaminated - due to the responses in my pet after eating these specific treats from this specific bag. She has been throwing up pretty frequently following the ingestion of these treats. After not giving them to her for a few days because of the vomiting, and me not suspecting at the time that there was something wrong with the treats, I gave them to her again and she started vomiting soon after ingesting the treats.	6	Years	Domestic Shorthair	Cat	5.5	Pound	
<a href="#">EON-329362</a>	8/15/2017 22:08	Chicken Soup for the Soul Holistic for Health Weight Care, Chicken Soup for the Soul Holistic for Health Adult Small Bites	(b) (6) was fed her dog food and ate it without any problems. I lay down for a nap and woke up and found multiple piles of vomit, dry heaving areas with spit up, and several areas of diarrhea to include blood. She got progressively worse so I took her to the emergency vet and they sent her home after treating her. She was treated with subcutaneous fluids, I shot for nausea, and a shot for reflux. She was sent home with Flagyl to take twice a day for one week. Instead of getting better if you hours she was getting worse so I took her to her regular vet. They took a sample of her stool and said they suspected salmonella. I advise my veterinarian that the only thing she'd eaten prior to getting sick was her pet food she's eating for a couple of years. She became lethargic, wouldn't eat or drink not even water. And had multiple episodes of bloody diarrhea. When she left the vets office she was given another antibiotic, Amoxicillin to take twice a day and something for the diarrhea.	11	Years	Shepherd Dog - Australian	Dog	21.5	Pound

<a href="#">EON-329174</a>	8/15/2017 13:40	Taste of the Wild High Prairie Puppy Formula with Roasted Bison & Roasted Venison, Taste of the Wild Wetlands Canine Formula with Roasted Fowl	We have been giving our older dog, (b) (6), Taste of the Wild dog food for years without issue. Our cat also eats Taste of the Wild. We recently got a puppy, (b) (6) and began giving her the Taste of the Wild puppy formula. A couple weeks ago, after purchasing new bags of dog and puppy food, we noticed that (b) (6) was lethargic and would turn her nose up to her food and (b) (6) began to have bad stomach upset, including diarrhea. After 3 days of diarrhea, we took (b) (6) to the vet where they gave her an antibiotic and suggested we give her boiled chicken and white rice for a few days to see if she improves. We decided to give both dogs the chicken and rice for a couple days. After the vet visit, we came across very negative reviews of Taste of the Wild on a consumer complaint site, as well as on their Facebook page. Many people are complaining of lethargic dogs, dogs with stomach problems, even some with liver or kidney issues. They had been feeding their animals this food for years but only had noticed the issue lately. Many of the bad reviews have been happening since July. Taste of the Wild is consistent with their reply to customers that they have checked their food and it's fine but this is very suspicious. We moved to different food and both dogs have noticeably improved. We contacted Ace Hardware, where we purchased the food, and they gave us a full refund. We went to a high-end pet store for new food and they said they had been getting a lot of returns of Taste of the Wild food. We are glad the extent of our dogs issues were not more severe but some dogs are experiencing serious issues. We believe this should prompt a recall and full review of their products.	4	Months	Collie - Border	Dog	27	Pound

<a href="#">EON-328557</a>	8/12/2017 0:48	Fancy Feast	I fed (b) (6) and the rest of my cats with Fancy feast all their lives. Something happened within the year. I suspect the food ingredients got changed as 3 of my cats prematurely died and two surviving ones developed some health issues. After connecting the dots, I realized it was caused by Purina Fancy Feast, this is the only food I have been giving them all. In February I suddenly lost (b) (6) who was only 8 years old and died of renal failure. The kidney disease progressed surprisingly fast even my vet was shocked to hear about my cat's sudden death. My cat died within less than 2 months. He lost half of his body weight, got lethargic, vomited frequently: several times a day, had horrible loose stool, constant thirst and increased urination. His body temperature dropped abruptly, his blood went poisoned according to the emergency hospital vet, his kidney shut down and he went into coma. My other cat (b) (6) died last week. He suddenly developed lack of appetite, lethargy, was unable to hold his head, through the palpation the vet felt a large abdominal mass. (b) (6) lasted less than a month since the problem started and died horrible death. He developed leg trembling, terrible pain while urinating, facial muscle twitch followed by seiizures and unconrolled urination. His last hour he was panting and couldn't breathe, had his mouth wide open. I had to give him an emergency pain killer shot to reduce his suffering prior to bringing him to the emergency room where he was euthanized. My younger newly adopted cat developed asthma within the last few months and another 7 year old cat developed constant vomiting. These two are doing better as I stopped giving them Fancy Feast. My ex husband is going to write to you too, as his cat who was only 8 has just died form large abdominal mass that cut blood circulation in his guts. He was feeding him exclusively Fancy Feast, just like I did. His cat became suddenly lethargic, couldn't hold his head, lost weight and lost appetite and had frequent vomiting	7	Years	American Shorthair	Cat	10	Pound

<a href="#">EON-328539</a>	8/11/2017 17:48	Merrick Grain Free Real Chicken + Sweet Potato Recipe	I had been feeding this food for two years. In April 2017 he got horrible diarrhea and nausea with some vomiting. I first went to the vet. We did the stool test and it was clear. He was put on metronidazole and a bland for the inflammation and irritation in his abdomen and intestines. The diarrhea cleared up and I mixed the dry food back in with the bland to get him back to the normal diet. The symptoms immediately returned. We went through another round of exactly the same, meds and bland diet, once back on the Merrick Chicken and Sweet Potato kibble, the symptoms immediately came back again. It was then that I realized it was the Merrick dry food that had been making him sick. I immediately switched to a different brand of food. I contacted the manufacturer and they opened an incident number. They also issued a Call Tag through UPS and picked up the mostly full bag of food that I still had. They took it upon themselves to diagnose my animal, sight unseen, with a food sensitivity, and mailed me a voucher for yet another bag of Merrick food!	3	Years	Siberian Husky	Dog	45	Pound

<a href="#">EON-328508</a>	8/11/2017 14:24	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	Used same brand since weaning; received new package on 7/25 and by 7/28 she needed emergency treatment at our vets office for severe diarrhea, dehydration. Vet treated, meds effective and fed prescription I/D with slow reintroduction of TOTW over 8 days. Within 36 hrs of being back on the TOTW alone she again became ill with previous symptoms. Now undergoing another round of treatment from vet. Between the food cost and vets trips I'm about \$500 in the hole... frustrating!!	1	Years	Retriever - Golden	Dog	43	Pound
<a href="#">EON-328409</a>	8/11/2017 9:36	Pedigree Adult Complete Nutrition	<p>First 18 mos. we fed (b) (6), but due to his rapid growth we were advised to switch. We bought Pedigree complete nutrition in 55 lb bags. Within a weeks time he started having seizures. Our vet originally diagnosed him as epileptic. We have now spent over \$10k in emergency hospital bills, tests, and medications which includes an MRI and a spinal tap. In May of 2017 the neurologist taking care of my dog suggested we switch dog foods, Purina Pro Plan bright minds #7 due to the MCTs ( medium chain triglycerides) The new bag was dumped in the dog food bin on top of the pedigree. A month passed without any seizures. Unknowingly when the Purina was gone and (b) (6) was again consuming the Pedigree the seizures returned severely. Now I made the connection and started researching.</p> <p><a href="http://www.ukrmb.co.uk/.../Pedigree%20sued%20by%20dog%20owner">http://www.ukrmb.co.uk/.../Pedigree sued by dog owner</a>  This link shows an international law suit that was filed due to animals getting sick and or dying as a result of Pedigree dog food due to arsenic in the product.  <b>ARSENIC POISONING</b>  Arsenic is used in the manufacture of pesticides. The gas from arsenic also has some industrial uses. Overexposure may cause headaches, drowsiness, confusion, seizures, and life-threatening complications.</p> <p><a href="http://www.naturalnews.com/041694_Pedigree_dog_food_pet_deaths_customer_complaints.html">http://www.naturalnews.com/041694_Pedigree_dog_food_pet_deaths_customer_complaints.html</a>  This link is one of many of the numerous complaints pet owners have against Pedigree dog food.</p> <p>(b) (6)</p> <p>This link is showing my dog in full blown grand mal seizure as a result of pedigree dog food.</p>	3	Years	Mixed (Dog)	Dog	116	Pound

<a href="#">EON-328345</a>	8/10/2017 20:52	Dentley's Rawhide Munchy Strips Peanut Butter Flavor	My families two dogs were given Dentley's Munchy Peanut Butter sticks as treats (on list of recall.) The smaller dog, (b) (6), approx. 20 lbs became sickly first with vomiting, diarrhea, and loss of appetite. After 2 days, it was apparent that he wasn't getting better and took to vet. Vet ran lab tests, gave antibiotics, and rehydrated him. Improved over the next five days afterwards. (b) (6) a 49 lb bassett/dauschand mix became ill about five days later after (b) (6) After two days of the same symptoms that (b) (6) had, I took him to the vet. Same thing, lab tests, antibiotics, and rehydration. He took about a week after treatment to fully recover. Vet bill combined amounted to about \$700.00!	13	Years	Other Canine/dog	Dog	49	Pound

EON-328338	8/10/2017 19:32	Earth Animal No-Hide Salmon Stix	<p>The following morning after eating a No Hide salmon stick, (b) (6) began vomiting. He vomited up his breakfast and an object we didn't identify at first. It had a rubbery texture and looked synthetic. It was approximately 1 inch by 1/2 inch, in a flat sheet-like shape with a very well defined sharp corner. Because (b) (6) is on multiple medications, I contacted his neurologist, who advised to give additional doses, assuming he had lost his doses by vomiting. I did so. (b) (6) vomited a second and a third time and appeared to feel very bad. By phone, (b) (6) neurologist's office advised to take him to his regular vet for a radiograph to check for obstruction. I did so, and (b) (6) vomited a fourth time at the vet's office and began having seizures because he hadn't been able to keep his medication down. They had to administer two doses of emergency liquid valium, rectally, to (b) (6) to stop his seizure.</p> <p>While in consult with the vet, I showed her the object he had vomited up and also a new No Hide salmon stick. The vet put the new No Hide in water to see if it would unravel or begin to break down. She later showed me that it had not broken down significantly, but she was able to determine that the No Hide salmon stick was indeed the same as the item that (b) (6) had vomited up. In her clinic notes, the vet identified the object as rawhide and reported she could feel another object in his colon.</p> <p>The vet's radiograph machine had been knocked out by a power outage, so I left and transported (b) (6) to the emergency vet clinic that shares the practice with his neurologist. (b) (6) continued to have seizures and was admitted to the hospital, where he remained for 5 days and 4 nights. At the hospital, an obstruction was detected on multiple radiograph and ultrasound tests, as well as by the specialists' feeling it during physical exams. (b) (6) continued to have gastroenteritis, including pain, inflammation, and bloody diarrhea for 3-4 days. By the third day, his condition was so critical, we were afraid he wouldn't survive. Eventually it was assumed that (b) (6) had passed the obstruction, although no one ever saw it come out.</p> <p>The GI issues eventually resolved before (b) (6) was released to go home. However,</p>	2.5	Years	Bichon Frise	Dog	13	Pound
------------	-----------------	----------------------------------	--	-----	-------	--------------	-----	----	-------

			<p>this rawhide incident triggered a cluster of multiple seizures per day for 7 days, which far exceeds the number of seizures and the duration of the clusters compared to any (b) (6) has ever suffered in the past. The neurologist had to administer additional anti-seizure medications greatly beyond (b) (6) previous medication regimen in an attempt to control the spiraling seizures. Moreover, the incident appears to have caused him permanent complications with his neurological disorder. He continues to require additional drugs and higher doses of previously given medications just to control his seizures. This is expected to be a permanent change and has greatly affected his quality of life.</p> <p>We are monitoring (b) (6) 24/7 at home and will follow up with his neurologist over the next several weeks and beyond. He will require additional blood tests to check the levels of the new medications he was given to control the seizures as a result of the No Hide incident. This incident with the No Hide salmon stick has been extremely traumatic for (b) (6) and our family. It may shorten his life and certainly has changed ours. His hospitalization was more extensive than anything we have previously experienced and has cost approximately \$5000 thus far.</p>

<a href="#">EON-328005</a>	8/8/2017 18:24	Sheba Perfect Portions Pate in Natural Juices Gourmet Chicken & Tuna Entree	I received my order of Sheba cat food. I noticed a terrible smell right away and upon opening the box the food comes in the smell became a stench. I then noted hundreds of "something" all over the packages which, after much research, I think are some kind of maggots - light brown with scored backs, all uniform size. These were on all the packets. I threw all but one away and decided to notify you (FDA). I noted at least one of the packets looked like it had split open on top or been punctured with a knife and inside that packet were hundreds more of these things. The box itself seemed to have a bulge in it. The packets were filthy and brown. I have concerns about the sanitation of the facility where these are stored.						
<a href="#">EON-327991</a>	8/8/2017 17:20	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	Opened new bag of food and (b) (6) did not want to eat...reluctantly ate later in evening. Hesitant to eat with each feeding and started with diarrhea. I thought he just had upset stomach...diarrhea got really bad but he was acting pretty normal. Diarrhea continued for several days and then he woke up one morning and was literally unable to move. I rushed him to the emergency animal hospital where he was admitted and given IV fluids and pain medicine and antibiotics. He was diagnosed with dehydration pancreatitis ,elevated liver enzyme's. He stayed in the hospital for three days and when I brought him home I fed him boiled chicken, egg whites, and pasta. Other then still having loose stool he felt much much better and was almost back to normal except for slight diarrhea ... my husband and I are separated but share custody of our greyhound. He came over the other day and when I fed him a few hours later he had diarrhea it was at that point that I made the connection to the food. I immediately stopped giving him the food and cooked for him but he did continue having diarrhea for two more days. Both dogs had been on this food for several years and never had a problem ... I am extremely confident in saying that I do believe that this problem was due to the taste of the wild dry dog food ... the hospital bill was \$2,287!!	11	Years	Terrier (unspecified)	Dog	25	Pound

<a href="#">EON-327820</a>	8/8/2017 13:32	Taste of the Wild Pacific Stream Canine Formula with Smoked Salmon	(b) (6) has been eating Taste of the Wild Salmon dog food since we got him. However, with our last bag that we purchased, he was not very interested. When he finally ate it because we offered him nothing else his stomach would grumble a lot. July 31, he started eating plants and then threw up 6-7 times that day. He refused to eat or drink anything, including his favorite treats. He had massive amounts of saliva/drool coming from his mouth (He doesn't normally drool). Aug. 1 he started to take some treats and drink water, but had water diarrhea all day and the next 2 days. He previously had unexplained skin lesions that the vet couldn't diagnose. We took him to the vet. They have done thousands of dollars in testing for parasites, Addison's disease and other tests and have come up with no diagnosis. I called the pet store where I bought the food and they said they've heard from many customers the exact same symptoms from the same dog food and that they recently saw a story on this dog food stating there may be a new problem.	12	Months	Portuguese Water Dog	Dog	53	Pound
<a href="#">EON-327656</a>	8/7/2017 21:32	Purinia ONE True Instinct Grain-Free Formula	I fed my 1 1/2 year old American Pit Bull Terrier Purina ONE True Instincts Grain Free dog food, First it dried his poop out so much he had problems pooping, within 3 days he was scratching non stop and I noticed he had bumps on him, on day 4 he woke up that morning and had oozing bumps under his arm pits, when I lifted him up he had raw open sores that had some liquid using out them , he continued to itch more and more as the day went on by the afternoon he had huge open sores under his neck, a bunch of bumps on his lower stomach, he wasn't eating or drinking at all. I started giving him Benadryl , Using triple antibiotic cream on him, Pure Aloe Vera Gel, anti itch cream . He's just laying around not wanting to move much because he hurts so bad from all the sores.  This food is the only change he's had so I know it's caused by this horrible food! I don't believe it is grain free! Because my dog always eats grain free food from 2 other brands and has never had any problems. what so ever. My dog looks horrible and feels horrible. and I feel horrible because I thought this was a good food and it is not. When I went to post on their facebook page I saw a few posts where the food was filled with bugs and the company is not responding to them And I have pictures of my dog and the open sores we are dealing with.	1	Years	American Pit Bull Terrier	Dog	54	Pound
<a href="#">EON-327472</a>	8/7/2017 14:20	Wellness Complete Health Pate Turkey & Salmon Entrée Smooth Loaf	I found a sharp piece of blue plastic in the can of wet food. This is a new formula and my cat had been puking and avoiding it so I started paying close attention. That's when I saw a blue shard of something poking out of the food as I was spooning it out. It is not soft plastic, it is quite sharp on the edges. I have photos and still have the physical object.						

<a href="#">EON-327461</a>	8/7/2017 13:44	Nutro Max Cat Indoor Adult Salmon Flavor	<p>Early the week of 7/30/17, I noticed my two indoor-only 9 yo cats were not eating their entire bowls of food. This is very abnormal; they typically eat their entire bowls of food within a 24 hour period. I did not think too much of it the first two days, attributing their lack of appetite to my recent absence (my family had gone on vacation and I had a co-worker come feed the cats while we were gone). However, the third day they did not eat their food, I noticed when I scooped cat food out of the food bag, some of the kibble was green-white. I immediately stopped giving them that cat food and cleaned all their bowls and trays. It has been approximately one week and they still are not eating their entire bowls of food (even though they I am giving them food from a different bag). I have found at least three separate vomits in the last week; I'm not sure if this is linked to the moldy cat food or it they are "just being cats".</p>	9	Years	Domestic Shorthair	Cat	15	Pound

<a href="#">EON-326437</a>	8/2/2017 11:20	Taste of the Wild Pacific Stream Canine Formula with Smoked Salmon	(b) (6) was not eating and vomiting. We took him to the ER. They treated for gastritis and sent home. He was very lethargic in the the morning, so we took to our regular vet. He was diagnosed with pancreatitis and had to stay overnight on IV therapy. He was sent home with cerenia and a canned diet. We were not given a good reason for the cause. (b) (6) does not eat people food, does not get into trash or things he is not supposed to. He is an indoor dog, so could not have gotten into anything outside either. We had fed Taste of the Wild - Boar for many years. We had just opened a bag of Taste of the Wild Pacific Stream Salmon before this happened. The following week, our poodle mix, (b) (6) started vomiting. We immediately took her to the vet. She had x-rays and an ultrasound. She also had to have IV therapy. They diagnosed her with gallbladder issues. Again...no real cause. I ended up with \$4,000 in vet bills in 2 weeks.	7	Years	Great Pyrenees	Dog	120	Pound
<a href="#">EON-326363</a>	8/1/2017 20:32	Natural Balance Ultra Premium Dog Food Chicken Formula with Carrots Brown Rice Fresh Potatoes	Foreign object found in the product. Upon opening the can, Plastic sheet measuring about 2" x 3" was found mixed in with dog food in can.						
<a href="#">EON-325957</a>	7/31/2017 18:08	Meow Mix Classic Pate with Real Tuna	My cat ate the Meow Mix Classic Pate with tuna, only ate about a quarter of the cup. She was severely sick for the next 48 hours, couldn't stop throwing up. Our 6 year old rat terrier dog, also perfect health, ate the remaining food from the cat dish (not intentionally, we didn't pick up the dish before he got to it) and he as well had the same reaction as our cat did. Our dog then had severe diarrhea. These are two perfectly healthy animals, no allergies to any foods and not on any types of medicine for anything. They are brought to the vet regularly and always in perfect health.	3	Years	Siamese	Cat	10	Pound

<a href="#">EON-325952</a>	7/31/2017 17:52	Hill's Prescription Diet z/d	Vetrinarian recommended this product for itchy skin. I weaned him onto it as directed by Vet, fed him for up to 4-5 weeks and within the last 2 weeks his anals had filled up with fluid 3 seperate times. I could tell that the food was making his bowel movements more loose, but had no idea it would do this. Upon the 2nd visit to express his glands, I asked the Vet tech to give him antibiotics, she said they would not unless I came back. Well, the third and final time, his anal sac burst, now he had to have the antibiotic. I fed him 2 tablespoons of pumpkin a day and switched him back to his other food, and have not had any further problems. I have read research that suggests this is harmful to dogs anal regions. Why is it still being sold?	7	Years	Ridgeback (unspecified)	Dog	68	Pound
<a href="#">EON-325940</a>	7/31/2017 17:24	Osteo TruBenefits	(b) (6) called into VRS to report and adverse event occurred that may have been related to VRS's Osteo TruBenefits (b) (6), is (b) (6) 80lb greyhound, who had previously been diagnosed as an epileptic and has been prescribed Phenobarbital and potassium bromide for medical management. Scholar was purposefully underdosed, giving only 4 tablets in stead of 5 with his dinner upon the initial administration of the product. 1 hour 30 min after administration Scholar experienced a seizure. The seizures continued thereafter and required 2 days of hospitalization as they weren't responding to IV Phenobarbital. (b) (6) reports last seizure before this had been 1 year prior and had been considered otherwise well controlled. Scholar recovered and has been doing well, no seizures reported since. It was recommended by the referring veterinarian to discontinue use of Osteo TruBenefits. No follow up was needed.			Greyhound	Dog	80	Pound

EON-325918	7/31/2017 16:44	Omega Benefits Canine Hypoallergenic Formula	<p>(b) (6) called VRS to report that an adverse event occurred in patient (b) (6) a 7 year old German Shepherd. (b) (6) had been recommended Canine Omega Benefits hypoallergenic in January 2017 for osteoarthritis. (b) (6) takes no other medications. On March 31st 2017 while seeing (b) (6) (b) (6) owner reported seizure like behavior twice, 1 week apart, having occurred 1 week before the visit. They expressed to (b) (6) that they suspected the seizures were related to the rosemary extract in the Omega Benefits. (b) (6) was unaware of that ingredient in our Omegas, or any correlation to rosemary and seizures. He reports (b) (6) physical exam at the time was nonremarkable and did not choose to run bloodwork. (b) (6) was not recommended any medications or follow up diagnostics or appointments. (b) (6) believes the pet owner will not be interested in continuing with the Omegas, and he gave them no advice either way since he was unsure of the correlation.</p> <p>(b) (6) believes the pet owner would accept contact from VRS to retrieve the lot number, as they are also interested in a refund which VRS assured him we would provide. I also offered for (b) (6) to speak with one of our veterinarians for education regarding the rosemary extract used in our Omegas.</p> <p>(b) (6) called (b) (6) and discussed the low amount of rosemary extract in our product. In humans, the monoterpenes are a component in rosemary that in high amounts, can lower seizure threshold, but this epileptics, to my awareness, has never been officially documented in canines. To be safe it is recommended to discontinue the Canine Omega Benefits, but it is our opinion that the small amount of rosemary extract in the product is very unlikely to trigger a seizure in a pet, especially one that wasn't previously diagnosed with epilepsy. (b) (6) does not think the product caused the seizure after doing his own research on rosemary, but agrees that discontinuing the product is recommended. (b) (6) was very happy with the call.</p>	7	Years	Shepherd Dog - German Dog		60	Pound

<a href="#">EON-325839</a>	7/31/2017 14:24	Blue Buffalo Blue Wilderness Salmon Recipe Adult	<p>I had been using Blue Wilderness Wild Salmon, for a couple of years. I bought a new large bag (30#) of the product, Blue Wilderness Wild Salmon on 04/14/2017 from the Petsmart, store (b) (6). Two days after starting on the new bag, both of my Shetland Sheepdogs developed bad dysentery. This continued for several days and I took them to my Veterinarian, (b) (6) Animal Clinic in (b) (6). They gave me flagyl for both my dogs and Science diet ID. The dysentery cleared up in about 2 days. After a ten day period on the flagyl and Science Diet, I fed my dogs another serving of the Blue Wilderness Wild Salmon, the dysentery was back the next day. I immediately stopped feeding this to them and replaced it with Nutro Ultra, no more problems after that. I Still have the dog food and receipt, but not the bag. I reported this to Petsmart via email, and on April 14, 2017 they replied and said not their problem and contact to the Manufacturer and the FDA.</p> <p>The product code on the receipt is 0084024310537.</p> <p>The Bar Code is 5849 3035 101 03122017.</p> <p>(b) (6)</p> <p>4/29/2017</p> <p>PetSmart Customer Care customercare@petsmart.com via (b) (6)</p> <p>Apr 29</p> <p>to me</p> <p>(b) (6)</p>	9	Years	Sheepdog - Shetland	Dog	26	Pound

<a href="#">EON-325756</a>	7/30/2017 23:04	Merrick Backcountry Raw Infused Hero's Banquet	Started feeding Merrick food because of the higher protein. Mixed with previous dog food. Unbeknownst to me, my Daughter was feeding same food (different flavor) and her dog started having kidney problems. Knew about the kidney problems but wasn't aware of the similarity yet. Original symptoms were frequent urination and excessive drinking of water. My dog began to show the same symptoms. She gets outside often enough we didn't really see the symptoms until we were gone for 5 hours one day and she about took my daughter out trying to get outside because she had to urinate so bad. That was unusual. She has never had a problem holding 'it'. We started noticing the excessive water drinking and the amount of urine when she would go out to potty. This was unusual. Per my daughters advice I immediately quit feeding her the Merrick food and within a week or so her symptoms subsided.	10	Years	Great Dane	Dog	90	Pound

<a href="#">EON-325754</a>	7/30/2017 22:08	Merrick Backcountry Raw Infused Great Plains Red Recipe	Bought the food in December 2016 off Amazon. Noticed she would pick out the Merrick kernels of food and eat the other dog food instead, which was unusual. She eventually went back and ate the Merrick kernels later. Noticed more frequent need to urinate/would have accidents in the house, noticed she was drinking more than normal amounts of water, and she was losing weight. It gradually got worse, and it was something I noticed but wasn't alarmed by because it was a seemingly slow progression. I believe it was gradual and not sudden because I mixed the Merrick food with another food for her usual diet. By the time I took her to the vet for her annual visit she was having to urinate about every hour or so (day - every hour, night - every 3 hours). She had her yearly exam May 12th, 2017 and the vet ran the usual IDEXX tests and her kidney/liver tests (BUN, albumin, SDMA, total protein, amylase) were all off (all her levels were normal and healthy the year before). I was told it was signs of hypoalbuminemia, glomerulonephritis, or protein-losing nephropathy. Came back four days later (5/16/2017) for her to have a urinalysis done. She had protein in her urine and her creatinine level was stage 4. I was told to expect the worse. She was put on prescription K/d diet. Her urine was tested again this month (July) and her levels were all normalizing. Getting detailed test done in another month or so just to check on things. Told the vet my suspicions about the food, she shrugged it off. Brought my suspicions about the food up to the vet again when my mother's dog started showing the same symptoms after eating the same dog food. The vet seemed more interested this time and marked it in my dogs file. My mother wasn't aware of my suspicions, had bought the exact same type of dog food from Petco, and fed that to her dog as the only food in her diet. Her symptoms came on a lot quicker. I instantly noticed the same symptoms, looked at what food she was being fed, told my mom to stop giving her the food immediately. She quit giving her the food and her symptoms rapidly improved.	9	Years	Greyhound - Italian	Dog	14	Pound
<a href="#">EON-325707</a>	7/29/2017 21:36	Waggin' Train Chicken Jerky Tenders	The night prior to our dog becoming severely ill, I fed him his usual dinner, then took him on a walk. I brought a chicken strip which I broke up to use as treats on our walk. Usually we use a different type of treat but we were out. Also, this was a new bag of chicken strips. We have given these exact brand and type of treats on a regular basis in the past so it was not completely new to our dog.	7	Months	Shepherd Dog - German	Dog	65	Pound
<a href="#">EON-325691</a>	7/29/2017 17:44	Fancy Feast Trout Feast Flaked	On 29 JULY 2017 at approximately 1700 hours I went to feed my cat and dog Fancy Feast Trout Feast (Flaked). When my cat was done eating I picked up her plate a noticed a piece of glass on the plate. I had taken the plate out of the cabinet and there was no glass present on the plate before I placed the food on it. I saved the piece of glass. Fortunately the cat ate around the glass.						
<a href="#">EON-325629</a>	7/29/2017 2:36	PureBites Freeze Dried Ocean Whitefish	Dog ate one treat from a brand new bag of PureBites Ocean Whitefish around 10pm on 7/25/2017. Dog had consumed two bags of the exact same product over the previous eight months with no vomiting.	18	Months	Retriever - Golden	Dog	67	Pound

<a href="#">EON-325588</a>	7/28/2017 17:28	Earth Animal No-Hide Dog Chews Salmon Chicken and Beef. 4" 7" 11" and Stix.	<p>I think it is likely that you have already been made aware of some controversy surrounding a product by Earth Animal called No Hide Chews. They are a dog chew that looks like rawhide, but states that it is made with absolutely no rawhide, as a result, being more easily digested by dogs and better for them. This product appeals to owners who will not give their dogs rawhide. Recently a dog choked on one of these chews, and as a result, the owner has claimed she had it tested by multiple experts and it was actually beef rawhide.</p> <p>The company has responded confirming their product is not rawhide and is made in facility with human grade products. This story is going viral online, with some reports saying the FDA has confirmed the tests as being rawhide. If this were the case I would expect to see a recall. Some dogs can't even eat beef, so it is also as issue if their two beef free flavors (salmon and chicken) are made of beef. Plus many of us would never feed our dogs rawhide.</p> <p>I have half a dozen of these chews in the 11 inch salmon variety at home and am wondering if they are safe to give my dog, or if they are incorrectly labeled as rawhide free, but contain rawhide. This has been a good company, and I don't want to wrongly assume the worse, but if there is deception, I want to make sure I never give these to my dog again. I'm guessing the dog who died was a result of an incorrect chew size, which is a hazard with any chew, but the question of whether it is rawhide remains. Being a consumer who currently has this product, I would like to hear that this is resolved.</p> <p>Here is a link with the story: <a href="http://truthaboutpetfood.com/is-no-hide-dog-treat-actually-hide/">http://truthaboutpetfood.com/is-no-hide-dog-treat-actually-hide/</a></p>

EON-325278	7/26/2017 16:36	Entero TruBenefits	<p>On May 23rd, 2017, (b) (6), a VRS (b) (6) spoke with (b) (6). (b) (6) was following up on a recent purchase of the Entero TruBenefits. At this time, (b) (6) had stopped giving the Entero TruBenefits because (b) (6) had a seizure after giving one dose. The event occurred on May 17th, 2017. (b) (6) said that he has no idea how much of the powder was given because the container appeared to be missing the scoop, so he just poured some on the food and mixed it in. (b) (6) does have a history of seizures and is on Phenobarbital for them. (b) (6) was hospitalized for the seizure, but that his veterinarian, (b) (6) does not believe the Entero TruBenefits is related to the seizure activity, due to (b) (6) medical history. When asked for the lot # on the bottle, (b) (6) said that he couldn't see it or find it. (b) (6) was asked if he would like our staff veterinarian to follow up with him regarding the adverse event and (b) (6) declined, saying that there was no need, as the Entero TruBenefits was not the cause of the seizure.</p>			Shepherd (unspecified)	Dog	132.7	Pound
EON-325266	7/26/2017 15:40	Omega Benefits Cognitive with DHA+ For Puppies and Kittens	<p>(b) (6) spoke with a VRS Health Coach on July 7th, 2017 and shared that's she had purchased a bottle of the Early Omega Benefits from her veterinarian, (b) (6) of (b) (6) Pet Care on June 26th, 2017. That afternoon (b) (6) went to administer the Early Omega Benefits, when she noticed that the 1ml pump that was provided as the dispensing mechanism for the product, did not work. (b) (6) elected to administer 1 teaspoon (5ml's) of the Early Omega Benefits with (b) (6) food. Per the labels directions for use and consideration of (b) (6) weight, (b) (6) should have received 3 pumps (3ml's), instead of the 5mls administered by (b) (6). (b) (6) is generally feed three times daily, (b) (6) explained that later that evening she offered (b) (6) her third meal and (b) (6) pushed it away with her nose. (b) (6) then began vomiting and having liquid diarrhea. (b) (6) took (b) (6) to the emergency room immediately, where she was given fluids for dehydration, an antibiotic (metoclopramide) and an injection of Pepcid over a 24 hour period. (b) (6) relayed that the veterinarian at the emergency facility felt it was likely caused by the fish oil. Since the visit, (b) (6) has recovered fully and is doing great. (b) (6) elected to go against the veterinarian's recommendation to continue the antibiotics and only have two doses.</p> <p>Additionally, during the conversation with the VRS Health Coach, (b) (6) was asked to share the lot information she realized the bottle was set to expire in 6/2017, and then became concerned that the adverse event may not have been due to her overdosing (b) (6) with the 5mls, but instead it was related to an expired and potentially rancid bottle of Early Omega Benefits. It was offered that our on-staff veterinarian, (b) (6) could follow up with (b) (6) regarding (b) (6) case.</p> <p>Per the manufacture the day of expiration is the last day of the month when dating is presented as the month and year, meaning the bottle of Early Omega Benefits would not have expired until 6/30/2017, after the adverse event occurred.</p> <p>(b) (6) followed up with (b) (6) and requested to have the bottle of Early Omega Benefits in question returned to VRS for evaluation after (b) (6) returned it to the practice, if possible. During the conversation, (b) (6) mentioned she did not believe the Early Omega Benefits was the only differential in this puppy's case and</p>	13	Weeks	Retriever - Golden	Dog	24.8	Pound

			<p>therefore there is no way to solely blame the oil for these GI signs. (b) (6) notified the product manufacture of the adverse event. As a result, the manufacture performed a review of the master batch records and found no unusual events during manufacturing that would impact the quality or safety of the product. Additionally, a peroxide value of a retained sample from the same lot (1501100) was performed and resulted within the product specifications. Determining that the cause of the gastrointestinal signs were unlikely due to the Early Omega Benefits. A signed letter from the quality manager of the manufacture was provided. Lastly (b) (6) followed up with (b) (6) Pet Care and spoke with a receptionist, during the call he was informed that (b) (6) was onsite for a follow up visit. He shared the information provided by the manufacture and asked that the receptionist share the information with both (b) (6) and (b) (6). He asked if either (b) (6) or (b) (6) had any additional questions to please reach out and we would be happy to speak with them. At this time, we no longer believed the pet owner or veterinarian would be sending the bottle in question to VRS for evaluation.</p>

<a href="#">EON-325044</a>	7/24/2017 17:00	Spot Farms Chicken Strip with glucosamine and chondroitin	I am the veterinarian and the pet owner. Purchased Spot Farms all natural chicken strips at Pet Supplies Plus in (b) (6) on July 6, 2017. Opened the package on July 20, 2017. Notice a large clump of fluffy white mold in the center of the bag. Bag was intact and no openings. I am going to the pet store to return the bag and have talked to a store manager (b) (6).							

<a href="#">EON-324884</a>	7/23/2017 20:00	Blue Buffalo Family Favorite Recipes Turkey Day Feast	A while after feeding my dog the canned food. I only give him a tablespoon or so and mix it with his dry food. He started pacing and acting anxious. He would not relax there was also some slight drooling. I had to place him in his crate because the pacing was horrible. After a few hours the pacing stopped. I stated thinking about it and remembered that the last time I gave it to him which was 2 days prior he seemed to be acting nervous but I did not put the 2 together.	11	Years	Beagle	Dog	28	Pound
<a href="#">EON-324883</a>	7/23/2017 19:52	Authority Chicken Jerky	Purchased Authority Brand Chicken Jerky from PetSmart. Fed <sup>(b) (6)</sup> , my 7 year old, healthy, happy lab, 1 and 1/2 pieces of the jerky at about 5:00pm. At midnight he woke me crying. He was gagging and had vomited a puddle of pink mucous or bile. He vomited four more times before morning, with each time it seemed like there was more blood. <sup>(b) (6)</sup> , always a very enthusiastic eater, would not touch his breakfast. Very lethargic. No barking. No tail wagging. No morning bowel movement (usually you could set your 7:00am clock by this) Went to vet at 9:00am. Was given penicillin and a shot to calm his stomach. He slept until noon, went outside and had 3 bouts of explosive diarrhea consisting of bright crimson blood. Two days and \$500 of emergency care later, he is eating and acting normal. Stool still running, but no bleeding.	7	Years	Retriever - Labrador	Dog	94	Pound
<a href="#">EON-324866</a>	7/23/2017 15:52	Acana Lamb & Apple Singles Formula	Brand New 13-lb bag of dog kibble is moldy. Acana Singles Lamb & Apple. The bag was opened on 7/23/2017 and I immediately called Chewys.com where the bag was ordered from on Jul 8 2017. They immediately sent a new bag that we are currently waiting for. Upon doing a Google search, there seems to be a number of social media comments on moldy dog kibble from Acana from the month of June 2017 onwards with unsatisfactory responses from the manufacturer shared.						

<a href="#">EON-324841</a>	7/23/2017 0:56	Blue Buffalo Blue Wilderness Rocky Mountain Recipe with Red Meat Small Breed	<p>My dog has been eating the Blue Buffalo Wilderness brand dog food for years with absolutely no issues at all, it has been great. He specifically eats the 'Rocky Mountain Recipe' flavor, in the 'Small Breed Bites' formula. Last week out of no where, my dog starting having uncontrollable and constant diarrhea. At first, we assumed maybe he just got sick to his stomach for some reason. Then, he started to vomit as well. At this point we were roughly 36 hours into him being violently sick to his stomach. I contacted my vet to discuss over the phone and they suggested I try to feed him some chicken and rice to calm his stomach. They said if for any reason he was uninterested in eating, started behaving odd or the diarrhea/vomit continued after the chicken/rice that I should bring him in immediately. (b) (6) has never been that sick to his stomach so I was extremely concerned, but it was the fine line of me wondering whether or not it was vet worthy, or if it was just a stomach illness that would subside. I fed (b) (6) boiled chicken and white rice for the next 3 days straight and sure enough the diarrhea and vomiting stopped. On the fourth day, in the morning, I fed (b) (6) chicken/rice with a tiny bit of his regular Blue Buffalo dry food mixed in. He had somewhat 'loose stool' that day but it wasn't concerning. The same day, in the evening, I fed (b) (6) his regular bowl of Blue Buffalo dry food. By bedtime, the diarrhea had started back up again in full force. He was sick for the next 24 hours. I, again, stopped the dry food and went back to the chicken and rice for the time being, while we figure out another dog food option. At this point, I realized it was his dog food that was causing the diarrhea and vomiting, so I started to research the food, thinking maybe I got a bad batch or something. I see that there was a recent recall on the Blue Buffalo Wilderness Rocky Mountain Recipe in the wet food version. The recall states the severe side effects being vomiting and diarrhea, etc. I don't think it is a coincidence that it's the exact same food in the dry version that is causing my dog to be ill &amp; I wanted to report this so it can be recalled and not have this happen to anyone else's pet.</p>	8	Years	Shih Tzu	Dog	15	Pound
<a href="#">EON-324829</a>	7/22/2017 18:24	Royal Canin Sensitive Digestion	<p>Opened a brand new 15 lb bag of cat food about 4 days after receipt. At the opening there was white dried up gooey looking stuff and inside is a substantial ball of white stuff that looks like some kind of mold. I have pictures and can send them if you'd like. I sent them to Royal Canin with various information and they are researching. FYI - the product used to be named Royal Canin 33 (I think that was the number) for Sensitive stomachs. It is no longer named by a number but is still for sensitive stomachs. The appearance and texture of the product is also different.</p>

<a href="#">EON-324732</a>	7/21/2017 14:20	Taste of the Wild Pacific Stream Canine Formula with Smoked Salmon	(b) (6) is a very social, cuddly, and extremely food-motivated dog. The only times we have experienced her avoid food is when she has had gastrointestinal issues. After a week of being fed from this particular bag of Taste of the Wild food (Pacific Stream Canine Formula with Smoked Salmon; best by 27/May/2018; 7147320 TOP0515A3N TAR 09:18), her appetite and personality changed. While she never overtly became sick, she became reluctant about eating and secluded herself from the rest of the family (e.g., when we tried to cuddle her, she would leave the room; instead of sleeping on our bed, she slept in our bathroom - none of which is normal for her). After letting this go for another week, I purchased a different bag and flavor of Taste of the Wild food. Her appetite and personality reverted back to normal almost immediately. I am reluctant to chalk this up to a flavor issue because (b) (6) has readily eaten the Pacific Stream Formula with Smoked Salmon for years prior to this event. I suspect this particular batch of food may be contaminated with something that upset her stomach.	5	Years	Shepherd (unspecified)	Dog	70	Pound
<a href="#">EON-324705</a>	7/21/2017 10:28	Canine Caviar	I know everything thats not supposed to go on that goes on i used to be employed by canine caviar foods at (b) (6). They package dry food by hand there is bugs in the ware house. They recieve product that is contaminated they will sprinkle off bugs out of treat bags an still use the treats. There has been multiple incidences were razor blades have been left in dog food bags due to human neglagence ..... One friday expired buffalo dog food showed up. We were told to stamp empty bags that we had no stock of. An then on monday all the buffalo was gone but all the bags we stamped were filled. Same bag count as the buffalo. <a href="#">EON-324529</a>	7/19/2017 13:20	Jerky Treats Tender Strips Dog Snacks Beef	My boyfriend purchased Jerky Treats American Beef Dog Snacks from Costco in (b) (6). We woke up the next morning after giving her the treat and realized she had thrown up in our bedroom. After cleaning it up we both had to leave to go to work and I took a half day so that I could check on her. When I got home I saw that she had thrown up in six different areas in the house and immediately took her to her vet. She had not eaten all day or had any water so I was worried that she was dehydrated. The vet confirmed that she was dehydrated and gave her fluids under her skin (subcutaneous fluids) along with a Cerenia infection (anti nausea). I wanted to report this as soon as possible because I saw multiple complaints online that this exact product was causing dogs to vomit and become dehydrated, requiring medical attention like my dog did.	9	Years	Chihuahua	Dog	7.5	Pound
<a href="#">EON-324434</a>	7/18/2017 23:12	Friskies	fed 2 cats using clean utensils, aprox 10 minutes later both threw up. 1 throw up if he over eats the other never does. Opening back up the can of food and the top and where i had scooped out food had turned orange/red.  repeated calls to producer resulted in hang ups when describing issue. chat contact resulted in "thank you for bringing this to our attention. It is simply extra meat juice" told them that in human food this would indicate contamination/infection and they ended chat.	4	Years	Domestic (unspecified)	Cat	15	Pound

EON-323764	7/13/2017 22:20	Earth Animal No-Hide Chicken Chew	<p>This seemed like the perfect product. Earth Animal Chicken Chew- The "Safe hide alternative", "hours of safe enjoyable chewing", "easily digestible", made from chicken, chicken gelatin, brown rice flour, organic eggs, olive oil, bananas and pineapple.</p> <ul style="list-style-type: none"> <li>- No warnings provided other than to supervise and she was never out of my sight.</li> <li>- She had chewed on the chicken chew off and on for an hour and 1/2. Had gone to the bathroom once.</li> <li>- I was watching her and when she got up from her bed and walked down the stairs to a patch of grass, I saw her sit instead of squat. Walked to the door to call for her and she came to me but seemed to be looking ahead and not at me.</li> <li>-She came into the den and began to gag. She was breathing fine but gagging. Then she produced an enormous amount of white froth and some dog food came up with it. She gagged again and I began to hear stridor (I am a respiratory therapist and sensed the change in sounds.) I screamed for my son, I looked to see if she had the chew or if it was foam making her gag. We had her in the car (she walked to it and hopped in) and at the ER in less than 5-7 minutes. I grabbed the door and told them that she was coming in and I thing that she has the chew in her airway.</li> <li>- That was the last time that she was conscious because they sedated her to relieve the obstruction. She died 12 hours later. Had seized when they pulled the sedation down a little. Then her temperature spiked. She died at midnight (b) (6)</li> <li>- Object was retrieved and has swollen much larger than the original product. It became a thick, tough hide-like material. Object is in my freezer and I have numerous pictures of the size, thickness, etc.</li> <li>- Pet store owner was called. I begged her to pull. She contacted the Earth Animal company and the wife/owner as well as the VP of operations called me ensuring me that they will fully research.</li> <li>- I sent out a FB post on the 8th and it was shared thousands of times.</li> <li>- With that sharing came numerous stories of "near misses" from owners with this product. I have collected many of those in a document and I must fight so that no one</li> </ul>	5	Years	Dogue de Bordeaux	Dog	125	Pound
------------	-----------------	-----------------------------------	---	---	-------	-------------------	-----	-----	-------

			<p>else loses a beloved pet.</p> <ul style="list-style-type: none"> <li>- The company had indicated that they were going to research it and we would get it to their safety lab...They have not done so but are just trying to counteract the exposure following the widespread sharing of concern over this "No-Hide" that became a thick hide like product. The called one of the organizations that shared the story and wanted to comment with their own comeback.</li> <li>- I am going to send out for analysis myself.</li> <li>- I continue to ask them to pull the product and they are no longer responding to emails</li> <li>- My mission is to speed up the removal of this product before another animal dies</li> <li>-Company called the pet store and told the owner that they are making a statement that she told me not to buy for my sized animal. NEVER was that said. Pet owner told them that they can't say that. Why should the pet store be responsible to warn and who warns those that buy on Amazon. If they make that statement, it is criminal. There is no guidance at all on size and unlike rawhide, I never would have considered size as an issue since it was made of these easily digestible foods. I was happy that I had found a healthy safe chew with the fewest calories possible. She had chewed the smaller product and it crunched with no problem. Again, the was NO HIDE. She had also eaten 2 salmon products and they were easily chewed and eaten. Never did they develop the thick hide-like consistency that was pulled my girl's airway.</li> <li>- This company made a claim in the past of 100% digestibility and had to issue a statement saying that it is really on 56% digestible. The history of inaccurate claims began there. Labeling of animal treats MUST be regulated and education must be a priority. (I'm sorry about adding my comments in but if I don't fight this, I won't survive this grief.)</li> </ul>						
<a href="#">EON-323597</a>	7/12/2017 14:20	Rachael Ray Nutrish Real Chicken & Veggies Recipe	The dog has been fed this brand of dog food for probably more than 5 years, Rachel Ray Nutrish Chicken and veggies dry dog food. I purchased a new bag of food on June 5th, shortly after he experienced uncontrollable diarrhea. I visited the vet after two days and they put him on an antibiotic for a stomach parasite. The vet and I concluded that it must have been something he got into during a trip to the beach on June 4th. He has been on a diet of wet dog food since then because he refused to eat the dry food after that.. A couple of days ago I decided to start mixing the Rachel Ray dry dog food in with his wet food because I didn't want this brand new bag to go to waist. Within two days he began having uncontrollable diarrhea again. There was no other outside source that could have been responsible, he has only been in my apartment and yard. After looking online for recalls of dog food, I discovered that his product has not been recalled, but found several recent accounts of the same problem attached to this dog food in pet food discussion forums. There is definitely something wrong with this batch or this brand, like I said he has been on this food for years and it has never been a problem until this new bag.	13	Years	Sheepdog - Shetland	Dog	30	Pound

<a href="#">EON-323593</a>	7/12/2017 13:24	Orijen Original	<p>(b) (6) was doing fine, full of energy, eating all of his food until I brought home a new bag of Orijen dog food. He had been eating this food for a while and always loved it. Once I opened the new bag and started giving him that food I noticed a change. He ate it for a couple of days but then seemed less interested at every meal. He got to the point where he wouldn't even try to eat it. I mixed boiled chicken in with the food and he would take a bite and spit out every piece of the dog food and only eat the chicken. He then got to the point where he wouldn't eat anything touching that dog food. We got concerned as he seemed to not be feeling well and had runny stool. We took him to the vet and they put him on a pro-biotic. He did not improve. One night he was shaking really bad so we took him to MedVet ER and he was diagnosed with pancreatitis. We put him on a very bland diet and did not give him any more Orijen food.</p> <p>I started researching the Orijen food online and noticed a lot of people had dogs with the same issues (stopped eating the food, diarrhea, digestion issues, really sick). The common factor in all the cases I read about was their dogs was on Orijen food produced in Canada. But once they fed their dogs the same Orijen food from the new Kentucky plant, they started to get sick. (b) (6) had had at least one full bag from the Kentucky plant and then started to get sick around the time we opened the most recent bag.</p> <p>(b) (6) seemed to be improving but the pancreatitis ended up coming back and getting worse. We went back to MedVet ER and (b) (6) spent 4 days in the hospital. When we came home his appetite never returned. He got really weak, could barely stand up or walk. We said goodbye to our beloved (b) (6) on 6/20/17.</p> <p>After reading about all of the people who have lost their pets due to stomach issues and Orijen/Acana food produced in Kentucky, I'm convinced it had to have something to do with the food coming out of Kentucky. There has to be something different/wrong with the food being produced there that is making the dogs sick.</p>	13	Years	Mixed (Dog)	Dog	70	Pound

<a href="#">EON-323100</a>	7/10/2017 7:56	Nutro Max Grain Free Adult Recipe with Pasture-Fed Lamb	Started feeding dog nutro max as suggested by pet smart after searching for a better food for my dog. We started feeding him in (b) (6) and he started to become sick. He was omitting on and off. Not thinking it was the food because he passed the transition between the two foods good we tried other options. We tried Pepcid and a higher raised food bowl. Eating smaller meals throughout the day thinking he was eating too fast. Slowly he got Worse. His symptoms going back and forth from bad to ok. In (b) (6) we came home and he wasn't eating at all. He was drinking a lot and peeing a lot but by this time he lost weight and wasn't keeping down the food. We switched him to rice and chicken and he was acting better for a about a week. When we came home from work (b) (6) he was having trouble walking. We took him to the vet his blood levels were so elevated the Dr said he never saw the BuN and Creatine level so bad. We had to put our dog down. His kidneys weren't working he was dehydrated, lethargic and extremely sick. We went back and forth about what it could be and realized our healthy dog got sick only after we switched him to nutro max dog food. After reading other stories we had to share ours. This food should not be sold!	5	Years	Retriever (unspecified)	Dog		

<a href="#">EON-323080</a>	7/9/2017 21:20	Wellness Petite Entrees Mini-Filets with Roasted Chicken Carrots & Red Peppers in Gravy, Wellness Petite Entrees Mini-Filets with Roasted Beef Carrots & Red Peppers in Gravy	<p>My dog has been eating Wellness products for many years, and for the last year he's been eating Petite Entrees for most of his meals. I recently ordered four flavors in bulk from Chewy.com in (b) (6); previously I had been buying them at the pet store. Usually he eats two entrees in the morning and at night, with dry food from Orijen available at all times.</p> <p>I bought flavors that my dog had eaten before and tolerated well. On (b) (6) I started feeding him the entrees from this order, and the next day he started throwing up 3-4 times a day. I switched to exclusively dry dog food for three days and the vomiting stopped, so I tried another Petite Entree and he started throwing up again a few hours later. The vomiting increased and continued even after switching back to the dry food, and he started having diarrhea on (b) (6)</p> <p>Throughout this time he still had an appetite, was drinking water, and acting normally. He stopped eating and drinking sometime on (b) (6), and had not had anything by mouth or made any urine by (b) (6) so I took him to the emergency vet. He was given an injection of Cerenia, but fluids were not given due to his history of heart failure. Between that night to today (b) (6) he ate minimal amounts of Gerber's chicken flavored baby food and water, and became increasingly listless. During this time he was only able to take his normal medications on four occasions.</p> <p>He was taken back to the vet on (b) (6), given another injection of Cerenia and blood labs were taken. The labs came back today and showed renal failure, elevated white blood cell count, and elevated pancreatic enzymes, so the decision was made to euthanize him.</p>	16	Years	Spitz - German Pomeranian	Dog	7.5	Pound

<a href="#">EON-322990</a>	7/8/2017 3:52	Rachael Ray Nutrish Ocean Lover's Variety Pack	My boyfriend and I recently decided to change our cats food to a healthier alternative. We bought a pack of Rachel Rays wet food. She seemed to not like it at first, but she favored the fish packs over the chicken. So on the 7th of July, 2017, we went to stop and shop and got her a package of exclusively fish. She is kind of a picky eater, so she was hesitant at first to gobble it up. We give her half of the cup or can of food at a time so she doesn't pig out. At night, she was meowing and pacing around her food station, implying she was hungry, so I took the remaining half of the cup out of the fridge. When I looked into her bowl and moved the food around to rotate the remaining bits, I noticed a piece that was strange. I picked up the tiny dish and got a little worried. So I picked out the strange piece, and instantly pricked my finger, that worried me even more. I pinched it and squeezed it and it didn't crush in my fingers like a piece of grizzle or a fish meat. It was a bone. After taking a video of the piece, which was as long as a pinky nail and extremely pointy and sharp, I cleaned it off in the sink to get off the remaining food fragments and examined it for a minute or two, pinching it and trying to see how hard it was, it's rock solid. If she had swallowed it, I fear that it would have done significant damage. I preserved it in a plastic bag.						

<a href="#">EON-322969</a>	7/7/2017 18:52	Primal Pet Foods Nuggets for Dogs Lamb Formula	<p>my dog became very ill, listless, throwing up, diarrhea for 2/3 days. tested for chlorstridium and came back positive irritated pancreas and stomach lining</p> <p>i noticed when i opened this new bag of nuggets and heated it up as i have for 10 years that the color of the juice was not the same as normal, thought that they changed the formula, however i called them and they stated no. then he became very sick and nauseous, diarrhea all the time and then vomiting.</p>						
<a href="#">EON-322892</a>	7/7/2017 11:56	Wild Harvest Daily Blend Parakeet Canary & Finch Orange Essence	About 30 minutes after I feed my 2 birds they both starting to have seizures. One passed away about 45 mins after eating and the other about 30 minutes later. I had just opened a new bag of Wild Harvest Dailey Blend Parakeet, canary and finch food. This was the first time they had eaten any food from this bag. When I was putting the new food in the cage they were perfectly fine. They were both sitting on there perches singing to me. This was around 9 pm. There was nothing else in the house like stoves, candles, heaters, drafts etc. that could of had this effect on them. I have attempted to contact local vets to see if anyone can preform an necropsy but the only one that does is the college. I spoke to the DR at the college and he said that he doesn't do them in summer because school is out.				Parakeet		
<a href="#">EON-322849</a>	7/7/2017 1:40	Evanger's Grain-Free Wild Salmon	<p>I fed her about 3/4 a 12,8 oz can of Evanger's Wild salmon canned dog food On (b) (6) She died (b) (6) . She wouldn't eat on (b) (6) (b) (6) She seemed slow, But her gumes where pink and her nose was wet and cool. (b) (6) I came home from work she didn't greet me at the door. When she did come in she drank a lot of water, She then went and laid down on her bed, The next thing I saw she was drooling badly. She went into my bed room, about 5 min latter she staggered out and fell down in front of me. I started calling Vet's (it was the (b) (6) weekend) There where no vet within 40 miles (and the answering service I got said the vet on call didn't want any new patients!! They the let me talk to a nurse. All she could say was "It sounded like she had been poisoned"! That I should try to get her to a vet. Then she pooped blood that smelled terrible then blood sprayed out of her nose and mouth, I held her an pet her told her it was ok to go. And she died in my arms.</p>	5	Days	Hound (unspecified)	Dog	85	Pound

<a href="#">EON-322848</a>	7/7/2017 1:04	IAMS Sensitive Naturals Ocean Fish & Rice Recipe Adult	<p>On or about May 30, I purchased a bag of Iams Sensitive Naturals. Around June 16, my dog began to act lethargic. On Monday, June 19, he vomited multiple times, had diarrhea and could barely stand or walk. I took him to the vet and an x-ray showed a large obstruction in his small intestine. He was treated for three days with IVs, antibiotics and stool softeners. When he finally started to "clean" his system, the vet noticed a "sandy" material in his waste. A radiologist report also noted the appearance of "sand-like" material on his x-ray. My dog is an inside dog and is not exposed to sand. He doesn't dig holes and I have not taken him to the beach in over 12 months. After seeing pictures of the "sandy" stool, I began to think about what changed and I immediately thought of the food. On the evening of June 22, I inspected his food and noticed it has a sandy material on it. So, I decided to place about 1/4 of the dog food in room temperature water.</p> <p>Almost immediately, I noticed a sandy-looking substance fall to the bottom of the cup. About 16 hours later, I rechecked the food. The food morsels were spongy and inflated-looking visually, but when I touched it, the morsels have a gritty, sand-like texture. I proceeded to lightly rub the food, and more sand-like particles were released. The bottom of the cup also had a sand-like material at the bottom. I am concerned about the food, and that it caused my dog to go through this serious health issue. I showed the vet the photos, and we discussed how strange this was (this was dog was in good health, and had never had any intestinal/stomach/digestion issues) and he commented that the food could have been what led to the obstruction. The vet also commented that the size of the obstruction, in his professional opinion, would be about two weeks worth of food he ingested. This coincides with the time I purchased this food product.</p>	13	Years	Dachshund - Standard Smooth-haired	Dog	13	Pound
<a href="#">EON-322842</a>	7/6/2017 21:48	Purina ONE Tender Selects Blend with Real Chicken	<p>Cat # 1 phased in new food over 5-7 days. (Other cats on different food). Vomiting and Diarrhea, increasing to bloody diarrhea. Thought it was an illness until same food introduced to 2nd cat with result of diarrhea. 3rd cat had diarrhea after a small amount of food. Diarrhea resolved with cat 2 &amp; cat 3 when food stopped but still continues with 1st cat who ate more of it for a longer time (approx 7 - 10 days). Took 1st cat to vet, fecal lab test came back no unusual organisms. Was not convinced it was food until introduced food again to cat #2 &amp; #3 with diarrhea returning and disappearing when food stopped.</p>	9	Years	American Shorthair	Cat	16	Pound

<a href="#">EON-322822</a>	7/6/2017 17:20	Dexter's Chicken Jerky	<p>I purchased three 8 ounce bags of homemade Dexter's Chicken Jerky on EBay. They also sell their product off their webpage which is www.dexterschickenjerky.com</p> <p>When we opened the second bag and gave it to our dog, we noticed that the product had turned green from mold and emailed them for a replacement. They claim that in our packing material there was instructions that we were to keep their product in the freezer and they could not offer a replacement. There is nothing on their label, Ebay auction, or on their webpage with these instructions.</p> <p>We contacted EBay with our safety concerns (as well as the manufacturer). We told them we didn't care about the money but we do care about the safety of animals. We reported this on June 7, 2016 and nothing has changed on their website. In addition, their website claims their product is freeze dried. It is our understanding that freeze dried should not require special handling. I still have the moldy product if you would like to test. The bags we sealed in a airtight packet.</p>							
<a href="#">EON-322647</a>	7/5/2017 16:32	Special Kitty Select Grilled Tuna & Sardine Recipe	I purchased a can of Special Kitty cat food at a Walmart in (b) (6) and found a large, sharp bone it which could have injured or even killed my cat. <a href="#">EON-322497</a>	7/4/2017 14:36	Nature's Variety Instinct Grain-Free Lamb Formula, Castor & Pollux Organix Grain Organic Turkey Recipe Pate	<p>Gave both cats a new can of food we purchased at Petco. It was a 5.5 oz canned cat food by Nature's Variety Instinct 95% Lamb formula. Best by 'February 16, 2020' 23LMM3 0503 11.</p> <p>I fed both cats out of this can. Both cats started vomiting, and developed excessive diarrhea. (b) (6) had it so bad, he went right on the floor of the Vets office as he couldn't hold it any longer. (b) (6) developed lethargy too. He ate the bigger amount of this can. The vet ran blood work on both cats. They were healthy. They said the white blood count was slightly higher in (b) (6). My total vet bill for two cats was over \$900 to treat both cats with an anti-vomiting and anti-nausea medication: "Reglan" (3 days for each) and "Metronidazole" (10 days) (b) (6) seems to be not his total self. Their stools look better. (b) (6) has vomited since being off, mostly hairballs. The vet told me they both had 'Parasites' in their intestines.</p> <p>I also fed them Organix brand canned cat food also purchased at Petco on (b) (6) (b) (6) and (b) (6) developed diarrhea within hours of eating this food. Is it bad food in the cans or bad storage of food causing bacteria to grow in food? I have to contact Organix brand by Castor &amp; Pollux to report this happening with their food as well. They have both recovered from this food without being taken to the vet but (b) (6) still isn't eating as much as he used to eat of canned cat food. Name of this brand: Organix grain-free 'Organic Turkey Pate' Best by 21 Jul 18 16203 CLK 2 07940 0827.</p> <p>I have both cans still. I don't have any food to test however from either can. All was ingested by two cats.</p> <p>Thanks for your time.</p> <p>(b) (6)</p>	7	Years	Siberian	Cat	12	Pound

<a href="#">EON-322486</a>	7/3/2017 22:28	Blue Buffalo Blue Wilderness Chicken Recipe Adult, Blue Buffalo Blue Wilderness Chicken Recipe Adult Small Bite	Became lethargic vomiting bright blood. Having diarrhea that was bright blood. Not eating not drinking. I looked up what could be wrong. Decided to just quickly take to our vet. They ran several blood test. One was over 100\$. It was according to all test that (b) (6) had pancreatitis . She was dehydrated due to diarrhea and vomiting. At vets she received a 1,000 liter bag of normal saline. Antibiotics I.V. And was sent home with oral antibiotics bid for two weeks. It took a couple of days for her to start eating but she was drinking. Had taken pictures of dog food. Vet did ask me what dog food they were on and I showed the pictures. He said the Yorkie that was in waiting room had same diagnosis and was on the same food. When I went to pick up (b) (6) they had informed two other small dogs had been brought in after me. On the exact food as (b) (6) Vet also informed me the last two weeks they had had several who had come in with diagnosis and same dog food. That was just one vet!	5	Years	Terrier - Yorkshire	Dog	9	Pound
<a href="#">EON-322384</a>	7/2/2017 22:08	Tiki Cat Aloha Friend Tuna with Pumpkin	After serving Tiki wet food to my cat for two years I began to find hard, sharp fish bones with potential to pierce the alimentary canal walls or become stuck; I am using a toothpick to thoroughly screen the remaining packages as I feed them and will no longer buy Tiki when the packages run out.						
<a href="#">EON-322379</a>	7/2/2017 20:16	Champion Breed Large Biscuits	<p>I want to notify your company of a mishap that could potentially affect our dogs. First and foremost, our dogs are part of our family. We consider them like our children. We strive each and everyday to ensure that their health and well being is intact. Recently, as a result of someone's clear lack of care and inability to do their job properly I now risk the potential of all three of my dogs getting sick and potentially having medical complications. Last week I went to K Mart and purchased several bags and boxes of "Champion Breed large biscuits". I began to notice strange bugs all in my bedding set, couch, dog kennels etc. Basically anywhere that my dogs would eat the treats. I just discovered that these bugs were all inside of the large biscuits. There were several eggs laid inside of the box. My dogs have been consuming these biscuits with all of these bugs inside of them. My dogs have now been ingesting these bugs for almost a week. How can somebody still put these products on the shelf with the potential of it affecting somebody's dog? Again, that is irresponsibility of the store which in turn reflects poorly on your brand. I will never purchase another dog product from your company. I will not risk putting my loved ones at risk. I have no idea what these bugs are. I do not know if they can harm my dogs or my children. The liability falls on you guys. It is your responsibility to fix this. This is very stressful. I stayed up until 5 AM this morning disinfecting and cleaning everything that these bugs have come in contact with. I have pictures and videos to attest to everything I am saying. I expect to hear a prompt response with some form of resolution. If my dogs end up getting sick , I will seek legal options with my attorney. It is obvious that the product was not placed in a clean and sanitary location and was not stored in accordance with the consumer's wellbeing.</p> <p>I attempted to return the bags (3) and (2) of the big boxes of treats to kmart in the (b) (6) location (b) (6) , I put the boxes and bags in garbage bags where they were sealed as though the bugs would not come out . They Rudely advised that they could not do a single thing for me since the store was closing and I had received a 30% discount in my purchases of the treats already. I asked if I could speak to corporate about this issue ,</p>			Mixed (Dog)	Dog		

			<p>She stated she had no idea and she honestly could care less since she was not working for Kmart anymore .</p> <p>I am extremely disappointed &amp; upset , not only did my dogs ingest these things but these bugs were ALL over my house where my three kids and three dogs are in , I was treated extremely bad by an associate and essentially lost all this money on treats &amp; food .</p> <p>This speaks poorly on sears corporation and as a loyal customer for years I am saddened that this happened .</p> <p>I am expecting a prompt response in reference to this matter in attempting to Find a resolution for this .</p> <p>Very respectfully,</p> <p>Sent from my iPhone</p> <p>Sent from my iPhone</p>

<a href="#">EON-322365</a>	7/2/2017 16:04	Zignature Limited Ingredient Formula Duck Formula	My Show Westie from (b) (6) had just finished having a litter of puppies. The vet recommended Zignature Duck limited ingredients. We started her on it back in (b) (6). We then put my Yorkie on it. We had opened our 3rd bag of it when my Westie started displaying symptoms within a day or so she was throwing up and eventually the end of the week stopped eating and refused to eat or drink. The Vet initially thought it may be a urinary tract infection. We keep the food in air tight containers and my Yorkie ran out of hers a week after I opened the new bag and so I poured some of the new bag in hers. I also began feeding my show puppies the food to get them used to it at the same time but in very small amounts. (b) (6) my show Westie wasn't getting better and then our little Yorkie started displaying the same symptoms a few days later after I started her on the new bag. It was when i took My yorkie in for examinatuon that our vet made the correlation, did extensive testing on our Westie and determined he believed it was the food. By this time our puppies began falling ill. The vet had to admit (b) (6) the Mother Westie and put her on IVS for 4 days and start her on antibiotics. He had had to treat all the dogs with antibiotics and pepcid. We have allot of money wrapped up in these dogs so we have them into the vet frequently for check ups, I have kept them all quarantined prior to the getting sick to avoid any diseases with the puppies. We have 3 acres in our yard and we always take them out on a leash but they are kept in the house. We don't wear our shoes in the house because of sons allergies so we are certain there was no other exposures! Right now we have recently very sick dogs and are certain it was the food! I want the food tested by a neutral party not the company! These dogs are our family we have had the 2 for 6 years and havery invested thousands in the breeding and raising of the two puppies. We are devastated to watch them slowly decline with no answers. The Vet did blood tests, xrays, xray barrium shallows and ultrasounds to rule out any other illness and has said he is confident it is the food!			Terrier - West Highland White	Dog		
<a href="#">EON-322361</a>	7/2/2017 14:24	IAMS Proactive Health Adult Minichunks	After feeding our dog Saturday, she had severe lethargy. She only wanted to sleep and hide under the bushes. She also refused to come inside. By Sunday evening she refused to eat food or drink water, had a very dry nose. When presenting the Iams food, she immediately ran to hide. After a \$305 vet visit, we changed foods and she started to recover. I purchased the food at Target this time, when I usually get it from Harris Teeter grocery store. The food was discolored and appeared oily so I immediately threw it away. I kept a sample just in case it needs to be tested.			Havanese	Dog

<a href="#">EON-322355</a>	7/2/2017 11:44	Betsy Farms Grillers Made with Real Chicken	The dog had been feeling fine, running, talking walks, eating. I bought a bag of Betsy Farms Grillers and gave each of my dogs 2. The pit bull got sick within 2 hours. First was lethargic, and within a hour couldn't walk correctly, fell over once, would be laying down and raised his head for a few seconds, then his head would just fall over and bang on the floor like he had no control over it. He was breathly heavily. He would change positions every few minutes due to discomfort. This went on for about 7 hours. The next 48 hours he stayed in the same spot, would not get up without us making him. He would drink and eat some if brought over to him. It is now 4 days later and he seems to be slowly getting better.	11	Years	Pit Bull	Dog	68	Pound
<a href="#">EON-322336</a>	7/1/2017 20:32	Purina ONE Hairball Formula	On July 1, 2017, I purchased a 7 pound bag of Purina One Hairball Formula (purple label) cat food for my cat. When I cut open the top of the bag to transfer into a resealable container, I noticed 4 cocooned bugs stuck to the inside of the food bag. I went straight back to Petsmart and returned the bag and noticed another bag of the exact same food behind the counter that was returned as well with even more cocooned bug covering the inside of the bag. It was and is absolutely disgusting.						
<a href="#">EON-322328</a>	7/1/2017 16:48	HempMy Pet Certified Organic Coconut Oil Infused with Organically Grown Colorado Hemp Extract, HempMy Pet Certified Organic Hemp Seed Oil Infused with Organically Grown Colorado Hemp Extract	<p>I was made aware of a company marketing hemp treats for pets and I am concerned about the language on their website. They claim to be in compliance with CGMP guidelines for dietary supplements and make many statements about their products not being drugs (using legal terminology), but there are other statements that do indicate that the product s marketed to treat illnesses. Some of the literature from their website, <a href="https://www.hempmypet.com">https://www.hempmypet.com</a>, is as follows:</p> <p>"you may notice your pet feeling more calm and at ease, and older pets may be moving around more easily after use, this is most likely due to the other cannabinoids and terpenoids present in the products."</p> <p>"Here are some of the ways our customers have been using our products as they have been so kind as to offer feedback regarding how they have been using HempMy Pet products: Anxiety relief, reduction in size of growths, reduction in occurrences of seizures, pain and inflammation relief, increase in energy and increase of mobility in older pets."</p> <p>Links on their info page include the following language, in addition to marketing news reports from another company producing similar products:</p> <p>"In diseased states, the activation of these receptors with phytocannabinoids could be helpful to treat the underlying problem. Cannabinoids, particularly cannabidiol (CBD), has the potential to treat various medical problems, in a non-toxic way."</p> <p>"CBD can address a variety of issues for pets such as anxiety, separation anxiety, pain, and even cancer"</p> <p>I feel that the language used is deceptive to pet owners, and that cannabidiol is a drug regardless of their language. I am concerned that pet owners are using a substance that has not been proven safe.</p>						

<a href="#">EON-322290</a>	6/30/2017 19:36	Pure Balance Chicken & Brown Rice Recipe	We have been feeding the same make/brand of food for over a year. We bought a new bag, and the color looked darker, but I didn't think much of it. A few days after starting it, my dog started excessively drinking bowl after bowl water, to the point where he was unable to hold his urine for more than about 2 hours, and started having accidents if he wasn't let out every so often. We transitioned quickly to a different brand/make about 10 days after starting the food.	8	Years	Doberman Pinscher	Dog	84	Pound

<a href="#">EON-321844</a>	6/28/2017 10:44	Barkworthies Bully Stick Bites	I purchased a bag of Barkworthies Bully Stick Bites. When giving one of the treats to my dog, I found a rusty nail stuck inside one of the bully bites.						
<a href="#">EON-321809</a>	6/27/2017 21:52	Waggin' Train Chicken Jerky Tenders	He, a very well potty trained dog, whimpered often during the night, when I woke up his cage was filled with diarrhea, I have never seen this of my dog before. When I took him out in the morning to go to the bathroom his stool was extremely runny, akin to water. He then started to act very lethargic. My usually very playful and all over the place excited dog wouldn't even jump up or run towards me. When I fed him, he hardly ate. Usually he eats his food with wild abandon as soon as it is placed in his bowl. At this point I became very concerned and went over everything it could possibly be. I realized the only change, food or otherwise, were the treats we bought and started feeding him. We gave him one or two strips during the normal day and one before bed. After I came to this conclusion, I discontinued use of this treat and my dog started to act himself again. I had fed him the treat for four days total before I discontinued its use.	7	Months	Retriever - Labrador	Dog	70	Pound
<a href="#">EON-321676</a>	6/26/2017 16:04	Wysong Vegan Canine/Feline Formula	On (b) (6) I purchased a single 5LB bag of Wysong Vegan Canine/Feline food for the felines in my household from among searchable and similar products via the Amazon, LLC website, Amazon.com. Wysong advertised this pet food product and touted this product as "healthy" and "nutritious" . At that time of purchase, I agreed with the printed nutrition label on the packaging after reading the table of ingredients branded upon the packing of the food. I received the food as a shipment from Amazon Prime on (b) (6) . I then began to distribute the Wysong food to my cats. There was a gradual change within both of my felines' behavior patterns within a few days of consuming this product. I was totally unaware of the looming circumstances in which would pursue and cause such devastation. First, my cats became quite "lazy" and just laid upon the furniture. I had attributed this to perhaps they were abundantly satisfied with consuming the food. I then noticed that one of my felines was beginning to lose his vision; he was walking in objects and walls constantly. He then began losing a dramatic amount of weight within a 2 week time span prior to his death. He was blind and had become extremely malnourished and became gravely emaciated. My cat died within (b) (6) days of consuming the Wysong pet food. My 8-year old Son had awakened at 1:30AM and noticed that our cat was not in the usual place in our home where he sleeps, which has always been in my Son's bedroom. My Son then began to venture into places within our home and noticed the cat upon the living room couch and proceeded to pick the cat up and return to his bedroom; then discovered that the cat was clinging to the last moments of his Life. My Son burst into my bedroom where I was sleeping and awakened me in such an alarmed state. My Son was frantic, endlessly crying and informed me that his cat was not moving nor responsive. I began to calm my child and went to inspect what exactly was going on with our cat. I, too, had discovered that our cat had appeared to be clenching to the last moments of his life. I proceeded to call a veterinarian hospital that treats pets on a 24-hour basis. We left our residence overnight in transit to the veterinarian hospital as the staff at the hospital were awaiting our arrival. Our cat passed away while we were in transit. Upon arrival at the veterinary hospital, our cat was examined by the veterinary doctor and our beloved cat was pronounced that he had passed away. All this occurred at now 2:30AM on	3	Years	Domestic Shorthair	Cat	4	Pound

--	--	--

(b) (6)

Our next cat, who also consumed the Wysong food in (b) (6), experienced her health decline with a slower progression after the consumption of this 5LB bag of toxic food. I had the highest intentions of hopes that she was healthy post-consumption of the Wysong food; as I at the time had not directly attributed my previous cat's death towards the food until the frightening similarities of the decline of her perfect health became apparent. But for sure, I became aware once my female feline began to exhibit the same symptoms as my male cat. She too had become blind and experienced a dramatic amount of weight loss due to an apparent malnourishing element. Now that I had a prior experience in dealing with such similar symptoms and having to emotionally cope with such results, I presented my cat to a veterinarian for comprehensive examination. I was advised by the veterinarian that my cat's death was eminent and suggested that begin to prepare myself for this occurrence. My female cat passed 2 days later after her doctor's visit.

The shock and devastation that this has caused within my family and household is just simply unconscionable. We are totally stricken with grief. During my bereavement of now having the lives lost of two very healthy and precious cats, I began to set upon a mission of informing Wysong, LLC and Amazon, LLC of the occurrences which took place then resulted with the product in which is produced and promoted, respectively. As I surveyed the Wysong product, I discovered that exists is a class-action lawsuit within the state of California against Wysong which is being currently being litigated. The lawsuit filed against Wysong alleges that the ingredients and the contents in which the pet food product is comprised of contains harmful products that have not been evaluated by an official regulatory agency within the United States; in which the Wysong pet food advertises upon their brand packaging. I contacted the California law firm which represents the Plaintiff. Upon my delivery of statements and facts regarding an experience with Wysong which resulted poorly and the loss of life occurred, I was advised by representing counsel to acquire an attorney to examine and establish my rights as a consumer. In which is now my pursuit for justice and protection for others experiencing a similar deathly tragedy due to the negligence and perhaps unethical

--	--	--	--	--	--

			<p style="text-align: center;">business practices or wysong.</p> <p>After an amended and rather abrupt grieving period for the untimely death of my two cats, I contacted Amazon, LLC to bring further awareness to the consumer complaints that exist upon their website. At my time of purchase, I was unaware of the claims of death and harm to others' pets as customer responses and warnings upon the website. Never would I imagine to read a customer review of a product sold by a major retailer and discover that a review in such a delicate manner of explaining death as an effect of consumption and direct implication of the product in discussion. On Sunday morning, I called the customer service phone number listed for Amazon and spoke with an individual named Bob S. A rather rude and cantankerous individual per my assessment. As I spoke with Bob S., an Amazon consumer complaint representative, I made him aware of my circumstances regarding the Wysong product that I purchased for my household. Bob S. rudely advised me to contact Wysong and that Amazon holds no blame no liability nor involvement for the death of my cats; however, Amazon had been made aware many times previously that there are consumer complaints firmly describing negative and deathly experiences of this product. I immediately requested a refund for the purchase price of \$12 for the amount in which was paid for the Wysong pet food. Bob stated that I would be issued a refund for the purchase price of the Wysong food and that a total amount of \$30 including the purchase price of the Wysong Vegan Canine and Feline pet food should cover the cost of my "inconvenience" related to the death of my 2 year old and 4 year old cats. Bob S. further stated that I "have been more than compensated at least double for my loss and that no further funds will be given to be due to me related to this incident". I had never asked Bob S. for his compensation measures for the loss of my pets, as I had intentions of seeking other legal ease. The intention of my phone call to Amazon in which was poorly addressed by Bob S. was to directly speak to a representative of the company that the food in which I purchased had caused the deaths of my cats and to please investigate the contents of the Wysong product. Bob S. then assured me that he would request from Amazon's Quality Control Department that the Wysong product would be removed from the purchase queue. I then began to vigilantly notice that the Wysong Vegan Canine/Feline food had NOT been removed from the Amazon website for purchase</p>						
--	--	--	---	--	--	--	--	--	--

			<p>             Certain items food had NOT been removed from the Amazon website for purchase, and in fact, the Wysong is still currently available for purchase. I was surveyed to write a "consumer product review" upon the Amazon website. And now Amazon has been made directly aware of the deaths of consumers' pets that have occurred and yet, Amazon still offers the product for purchase.           </p> <p>             I contacted Wysong, LLC via phone at their corporate establishment via phone communication. The placement of that call within morning business hours, I presented my consumer experience to a Wysong representative in a very detailed account to a Wysong representative and was told that my consumer experience details would be forwarded to an individual from their company whom of which would address this matter with me. Later the same afternoon, I received a phone call from a representative of Wysong introduced herself by the name of Vicki and said that she was calling of behalf of Wysong and had been made aware of my consumer complaint. My conversation with the Wysong representative resulted in me bringing into acknowledgement that my pets have been harmed and have deceased from the consumption of this product. The Wysong representative offered her condolences for the instance. She then began to state that this was the very first of occurrence of death of product consumption in which she was ever made aware of within the company and that she has never been aware of any such consumer complaints. I directed her immediate attention to the online retail outlet source, Amazon.com, in which myself along with other consumers had been first introduced to the Wysong pet food. Upon the Amazon customer review section, there exists an abundance of negative consumer experiences regarding the purchase and consumption of this Wysong product and also death by consumption.           </p> <p>             Amazon LLC is liable for the death of my 2 cats and the negligence of other consumers' pets as well and should and will be held accountable for distributing a product without listening, viewing NOR researching a product in which they sell and distribute to consumers from their company website: millions upon millions of consumers. The endangerment of their complete negligence caused and perhaps is continuing the ultimate of negligence: Death. Multiple deaths of animals whom have consumed a product from the company in which Amazon allows Wysong to be a seller:           </p>						
--	--	--	---	--	--	--	--	--	--

			<p>continued a product from the company in which Amazon shows young to be a consumer, and then these products are continuing to be made readily available to the consumer and then distributed. Now, these products from Wysong have been distributed and delivered into the comfort of people's beloved homes, in which are people's sanctuary: homes in which all that reside there are all beloved family members. I have never ever called my cats "pets". Simply, they are counted in my household size, which was 8, now it is 6. Perhaps Amazon is the "backdoor" for Wysong. Amazon needs to be put on notice for regulatory non-distribution of the entirety of Wysong product. Amazon should at the very least have an obligation, with or without enforcement, of a standard of protection of the consumers in which they reach daily; consistently and Globally.</p> <p>Product satisfaction should be and is completely secondary to Safety.</p> <p>I did not read the prior customer reviews upon the Amazon.com website prior to purchasing this Wysong product for my household. For that, I am at fault, and my guilt will be heartfully felt for,....well.....an Enfinitii. Apparently, Amazon.com did not read these reviews either. Amazon willfully solicits consumer reviews from consumers for the purpose in which they are intended to serve with knowledge and experience prior to the consumer reviews being made available for public discernment be made public. All of the mentions of "death by consumption of product" by consumers, yet Amazon continued to distribute the product, forearmed AND forewarned with consumer review, willfully disregarding intimate comments of death regarding products sought, purchased, and sold, upon their distribution website. Amazon is responsible for researching the companies AND the products in which they distribute as Amazon chooses to have their company recognized legally as a reputable business corporation within the Global business market. Their company profile composite exists, as a mass distributor to consumers all over the World. Amazon stands accused of plaguing consumer's lives and households in regards to these incidents which have occurred from a product in which the distribute, despite the consumer complaints and deaths. We are not merely are speaking of a rash or an allergic reaction due to consumption of a product: this is regarding death by consumption. Not only was a product in which I purchased from Amazon toxic, it performed at deadly measure. Multiple times within my household and within other consumers' households of this product as well. In most</p>						
--	--	--	---	--	--	--	--	--	--

			<p>instances, consumers would have absolutely no introduction of these companies or corporations and their products if not for the advertising of Amazon and Amazon's distribution itself including the products in which Amazon makes readily available for the trusting and simultaneously unsuspecting consumer. Amazon is aware of the reviews of which they post. Amazon solicits reviews from consumers of the products yet continue to distribute hazardous products even once a discrepancy in the validity of a product of formally complained. As far as Wysong, I don't even want to touch that; they are as disgusting and toxic as the products in which they produce. I discovered their deadly product due to the negligent advertising and availability of Amazon and their apparent lack of holding nor upholding an established "company standard" within the products they decipher among and choose to distribute. Amazon's primary ethic, duty and responsibility to protect the consumer according to the rights of every product consumer. Amazon accepts responsibility for the tragic matters and results of their careless distribution; unless they choose to be plagues; in which the ultimate price paid bears absolutely no price tag whatsoever. The customer reviews and complaints are considered to be a factor and/or differential for their advisement and as they proceed to elect and grant permissions for companies to not serve as viable information for other consumers as well as for Amazon? The consummate unsuspecting consumer. Amazon is liable for ignorantly and improperly interpreting the factual-based reviews of the experiences of the consumer, the explicit and candid nature of the comments in which are produced through the experience of any product which is sold within their corporation should be considered factual, unless otherwise disproven via research or case review. What exactly is the purpose of the "review section" upon Amazon's website if not for reviewing the "satisfaction" of products for further purchase? Amazon bears and furthermore is culpable for these continued deaths occurring.</p> <p>Amazon should be put on notice primarily and most expediently: they are selling a product causing harm and Amazon is aware of these complaints. And by harm, I mean extreme emotional detriment, not just death by consumption. If Amazon is too incompetent "lazy" to research the viability and integrity, including the sustainability of a</p>						
--	--	--	--	--	--	--	--	--	--

			<p>company's product prior to acquiring the contract for agreement to distribute, then all damages belong to Amazon. Period. Amazon's lack of providing a proper protection of consumer standard, within a 2 days purchase and distribution timeframe, has caused detriment that I simply don't believe that I can reconcile for the tremendous pain that has been caused. I'm certain that others would agree. And this has happened to others prior to the grieving that is now occurring within my household.; a door in which was the only and final barrier to the harm that was introduced into my beloved home. Please Help Us. Please Help Them, the others whom now I share my grief, confusion, and unabashed tears. Wow, the pain is incredible.</p> <p>Sincerely,</p> <p>(b) (6)</p>						
<a href="#">EON-321673</a>	6/26/2017 15:48	Pedigree Adult Complete Nutrition Roasted Chicken Rice & Vegetable Flavor	I purchased pedigree 50lbs bag in the chicken and vegetables from target may 2,2017. We fed our pit/lab mix (b) (6) 3/4 of the then noticed the bottom of the bag is covered in mold. <a href="#">EON-321662</a>	6/26/2017 14:40	Taste of the Wild Rocky Mountain Feline Formula with Roasted Venison & Smoke Salmon	<p>I would like to submit a complaint against Taste of the Wild cat and dog food. Last Monday night/Tuesday morning I started feeding my cats a new bag of Taste of the Wild Rocky Mountain Feline Formula with Roasted Venison and Smoked Salmon. Last Wednesday, June 14, I noticed one of my cats vomiting. I didn't think too much of it until I came home about two hours later and he was vomiting bile and foam. He then went and laid in my bathtub where he became practically unresponsive (only would twitch is tail). I took him to the emergency vet thinking he had been poisoned and was there for three hours. They did lab work but the results wouldn't be in until the following evening. They also gave him antibiotics, subcutaneous fluids for dehydration, and an anti nausea and vomiting medication. The next morning he was still extremely lethargic and began to have uncontrollable diarrhea. Within minutes my other cat, who had seemed fine, became lethargic and began vomiting and having uncontrollable diarrhea as well. I could only get one cat to my regular vet (the one that had been to the emergency vet) where they prescribed him another antibiotic and gave him a probiotic for diarrhea. Since we hadn't gotten the test results back from the previous night, there wasn't a whole lot that could be done. Later that day, my mom came to the conclusion that something was up with either the food or the litter. The cat that got sick first is an indoor/outdoor cat who is up to date on all vaccines and my other cat is an indoor only cat who is also up to date on all vaccines, so we figured the food or the litter had to be the culprits. My mom ended up calling the pet food store, a small, local store and told them our situation. They said that they had received multiple complaints about sick cats AND dogs, all that were eating Taste of the Wild food. All of them had the same symptoms, lethargy, vomiting, diarrhea, and even a report about a rash with pustules. My emergency vet called me right afterwards with the lab results, everything was fine. I explained to him everything that trailblazers told my mom and he agreed that it is a good possibility it was the food. He said it could be salmonella, E. coli, essentially food poisoning. I stopped feeding them the food immediately. Ironically, after one being sick for two days and the other cat being sick that whole day, they got better and seemed to be themselves the next day but still a little lethargic. That day which would have been last Friday, June 16th, I contacted my regular vet to give them an update of what</p>	5	Years	Mixed (Cat)	Cat	10	Pound
----------------------------	-----------------	---	--	---	-------	-------------	-----	----	-------

			<p>trailblazers had said and they too agreed that the food was likely what caused it. So essentially my poor cats had food poisoning and I spent about \$1000 just for the one cat. I contacted Taste Of The Wild that day and gave them all the details and answered all their questions. They said they would have their vet return my call. The vet, Dr. Heldman, I believe is her name, left me the following message at 11:36 a.m. On June 16th:</p> <p>"So sorry to hear about your kitties and their illness. It sounds like they are getting straightened around now which is great. Thank you so much for providing the production code from the bag that identifies the 12,000 pound batch of food that yours came from. As of now we haven't had any other possible issues identified with your batch so kind of strange. I did see (b) (6) note that trailblazer pet supply said that other people had issues so I'm going to give them a call now to see what I can find out and then also if you have any questions feel free to give me a call back 866-214-6945"</p> <p>I waited a little bit and called my pet store, Trailblazer Pet Supply, to confirm that she did follow up with them and they said that their manager talked to her for 10 minutes and gave her all the info that she needed. I tried calling Dr. Heldman back at the number she provided but was told that she didn't want to speak to me until she received info from Trailblazer but that she would call me once she did. I never received a phone call back. My fiancé's grandmother called on my behalf both this Wednesday and Thursday but got nothing and no phone calls back. I also emailed them this morning. I spoke to Trailblazer Pet Supply this morning and they said that Taste of Wild had stopped communicating and everyone that called was having a hard time getting through. Trailblazer is a locally owned food store in Chico, Ca that is very small. They told me that they have had 12 complaints of sick animals from this food in one week, which is lot for them, 8 of those complaints came in 4 days. They posted something on their Facebook warning their customers, not bashing the company, and the post went viral all over the world. They received comments from people in other states whose animals have gotten sick from the food as well. They were the ones that recommended that I reach out to you. They also said that last Friday when Dr. Heldman called, they gave her all of the requested information then, which means I was lied to when I was told that Dr. Heldman didn't want to speak to me until she got the information from Trailblazer. Taste of the Wild insists that there is nothing wrong with the food but if that were the case I wouldn't think that there would be so many complaints. As of this morning there were 63 complaints against the company on the consumer affairs website. If you need any information from Trailblazer Pet Supply do not hesitate to call them 530-892-1848 Or me at (b) (6)</p>						

<a href="#">EON-321607</a>	6/25/2017 20:04	DreamBone DreamSticks Made with Real Peanut Butter	After consuming the Dream Bone Peanut Butter stick the dog began to vomit (noodle like material similar to the treat) and had explosive diarrhea all day! She was taken to emergency vet office later in the day, where it was determined she had Acute Gastroenteritis likely from the treat which was the only new thing introduced into her diet. The diagnosis was based off lab work and fecal sample... she was given subcutaneous fluids, anti-nausea medicine and antibiotics. These treats are made in China and are not digestible as advertised, and are in fact toxic to dogs! Our poor dog is trying to recover at present... bland diet including rice and chicken.	1.5	Years	Shepherd Dog - Australian	Dog	10.4	Pound
<a href="#">EON-321605</a>	6/25/2017 19:52	Earthborn Holistic Meadow Feast	I bought a new bag of Earthborn Holistic Meadow Feast on Monday, June 19th. By Wednesday, June 21st, one dog was vomiting so severely that it quickly progressed to vomiting blood, and another had diarrhea. We took the dog vomiting to the vet immediately, but he got worse before he got better. He developed diarrhea with blood...which was leaking out of his rear. He spent about 8 hours at the vet hooked up to IV fluids, pain medicine, and received two different antiemetic injections. Plus blood work and X-rays, you could imagine my vet bill. Today, I went to exchange the bag of dog food, and was told that they received several complaints and would recommend switching to a different brand, which after reading some of the other reviews and comments, I am glad I decided to switch. Earthborn Holistic is being negligent by not addressing the issues their food is causing.			Mixed (Dog)	Dog

<a href="#">EON-321573</a>	6/25/2017 4:40	Pedigree Chopped Ground Dinner Chicken & Rice Dinner, Pedigree Chopped Ground Dinner Beef Flavor	Dog had multiple episodes of throwing up after eating canned Chopped Ground Dinnerbeef flavor. (b) (6) recovered and I resumed feeding a week, 2 cans a day, with no additional issues. Bought additional 12 cans, and the illness occurred again with the Chicken and Rice Dinner flavor. But this time, it was severe diarrhea, lethargy, hunching at the withers, refusal of all food and liquids, dehydration, and aversion to cold. The dog spent most of her time the 2 day of the illness outside in 96 degree weather, although she typically does not tolerate heat. After 2 days, she began to drink water again and had tar colored stools with a bit of blood on the rectum discovered upon cleaning. After 3 days, she is feeling much better.	4	Years	Poodle - Standard	Dog	40	Pound

<a href="#">EON-321568</a>	6/24/2017 23:16	Evanger's Super Premium Duck & Sweet Potato Dinner for Dogs	<p>I fed my dog less than 1/2 a can of Evangers duck and sweet potato canned food, by the next morning she started exhibiting strange behavior and ate only some of her breakfast, (Acana dry) unheard of for her, she was not herself. I had to go out for several hours and left her a hollowed out bone that I had stuffed the other 1/2 can of same Evangers food in, as I give her that as a treat and felt bad she hadn't eaten breakfast. When I got home she had thrown up several times and had mucousy diarrhea, very lethargic. She had no food or water and I kept an eye on her and by the morning, she had thrown up more and had several more bouts of now bloody diarrhea. It was Sunday morning and I took her to an emergency vet clinic. She had a strange excitability about her while also looking terrified. More bloody diarrhea in the exam room. The vet ran a blood test and did an xray which showed nothing, vet called it severe gastroenteritis and prescribed antibiotic and anti nausea meds, Rx food. She continued to have diarrhea but stopped vomiting. The next morning she seemed worse. She looked unstable as she tried to walk and looked disoriented. She could not lie down for too long, she would stand up and pant heavily and looking terrified. I was able to slowly walk her to my jeep again basically had to lift her front legs and heave ho her back end up into my jeep and took her back to the vet. I needed someone to get her out of my jeep as she typically jumps out she was unable and scared to try to get out on her own. The vet did an ultrasound to be sure it wasn't something blocking or a tumor. That came back ok. I took her home and she was extremely lethargic and continued to have labored breathing, could not stay in one position and would just stand up and pant. It was so sad to not know what to do for her. Not interested in food. By the evening, she was not any better and honestly she looked so bad and was breathing more shallow, I thought I was going to lose her. During the night she could not make it outside and had more diarrhea, but by the morning, she seemed able to move a bit better and seemed less disoriented. Feeding her only the Rx dog food prescribed and small amounts of boiled chicken and rice she did improve over the next few days, but the diarrhea continued for another week or more. Her ability to move normally was back by the 4th day. She seemed to be back to herself but still had lingering diarrhea for more than 10 days. I would have never known about this recall unless I went back to Pet Supplies Plus on 6/22 to buy Acana, (b) (6) regular food. It's then I saw the recall notice for a recall that was from February!! Had this notice been on the shelf on 5/15 when I bought the Evangers dog food, I definitely would have not purchased it!!!! What my beautiful vibrant healthy dog had to go through and I truly believe she almost died, is beyond horrific and is inexcusable. I read on the recall information that pentobarbital was found in the flavors recalled and from a safety and preventative standpoint, and if they cared about dogs and consumers, they would have recalled and tested ALL flavors. All of (b) (6) symptoms were concurrent with the symptoms described as being affected by this EUTHANSIA drug. How could that drug find it's way into the food supply??? Are they misrepresenting the ingredient list and there is horse meat in there? I am so relieved and happy (b) (6) recovered but feel so badly that there are some people who lost their dogs. This company needs to be stopped.</p>	8	Years	Shepherd Dog - Anatolian	Dog	96	Pound

<a href="#">EON-321299</a>	6/22/2017 12:36	Purina ONE Smartblend	My dog normally eats another brand of dog food that I have had no issues with, she has also tried other brands with no adverse side effects, I bought her Purina One smart blend because I thought it was a reputable company and the store was out of what I normally buy. A week after she had been eating the food she started to get sick. She was vomiting 2-3 times a day and was acting strange. This occurred for the next three days... I took her off the food and put her on a different brand... she has since then had no issues. I still had some of the Purina food left so I dumped it out on the floor to examine it with a flashlight and there are, what appear to be, MOLD particles in her food, they are fuzzy and fungus like. I then researched and found that several other people had had the exact same thing happen with the exact adverse side effects. It is apparently a widespread issue, and there are reports of fly larvae and even nails in some of the bags of dog food. The food should be recalled at the very least, if production just not shut down at the Purina plant.	3	Years	Pit Bull	Dog	40	Pound
<a href="#">EON-321282</a>	6/22/2017 11:04	Orijen Six Fish Dog	I suspect, thanks to reporting from the Clean Label Project, that harmful chemicals (likely heavy metal contamination) in Orijen Six Fish dog food are suspect for the acquired portosystemic shunts and subsequent liver failure that my dog was diagnosed with in 2/2016.	5	Years	Corgi - Welsh Pembroke	Dog	32.5	Pound

<a href="#">EON-321273</a>	6/22/2017 10:08	Kirkland Signature Super Premium Adult Dog Chicken Rice & Vegetable Formula	All three dogs in household fed same food. First dog (3 yo FS doberman) became ill (vomiting, progressed to seizuring), presented to animal hospital and was deceased in spite of full hospitalization within 24 hours. Blood work revealed severe liver disease. Second dog (10 yo MN lab mix) presented next day for similar clinical signs, diagnosed with acute liver failure; deceased within 24-36 hours of hospitalization. While second dog in hospital, third dog developed anorexia. Blood work shows elevated ALT and globulins; has since improved with appetite and blood work normalizing. Unsure if food is source of illness however owner cannot locate any other source i.e. xylitol product, toxin in yard, no history of escaping from property, etc. Necropsy of second dog (10yo MN lab mix) showed severe icterus. Biopsy samples submitted to (b) (6) Veterinary Lab from multiple organs, liver showed extensive acute necrosis as likely cause of death but no cause of liver disease itself.	10	Years	Mixed (Dog)	Dog	90	Pound
<a href="#">EON-321079</a>	6/20/2017 16:16	Milo's Kitchen Chicken Jerky Recipe	(b) (6) was given a Milo's Kitchen Jerky Treat on the 19th of May which she did eat. I offered her another one the next day which was the 20th she did not want to take it she buried it in her bed. On the 22nd of May she started to vomit & was very lethargic & had trouble walking. I noticed she had eaten the other Milo chicken treat that she had hidden in her bed. On the evening of the 22nd she started vomiting that night & for the next 2 days after & just layed & wouldn't move. Did not eat, drink, nothing at all. Had taken her to the veterinarian on that Wednesday approximately around 4:00 p.m. the 1st thing the vet asked if (b) (6) ate anything different in her diet. YES the Milo Chicken Jerky Treat. They had taken her blood work & her white blood cell count was very low. She was placed on an IV & at the veterinarians for 4 days. She just layed there her blood work was not improving (b) (6) could not figure out why she had some sort of auto immune disease. In order to try to save her she was given a blood transfusion. After being at the veterinarians for 4 days they told me there was nothing more they could do for her & was given 4 different medications which she is still on. It is a day by day basis with her, she is not her healthy, playful, active self. She just lays by me on the couch or in her bed. We are giving her medication & just waiting.	9	Years	Chihuahua	Dog	12	Pound
<a href="#">EON-321056</a>	6/20/2017 15:04	Nature's Domain Salmon Meal & Sweet Potato for Dogs	After feeding Leopold Kirkland Signature Salmon Meal and Sweet Potato Dog Food he got diarrhea for about 4 days then he also began vomiting up to 8 times per day and was very lethargic and would not eat or drink. He has eaten that brand of food for at least 2 years and did not have this problem previously. We had to take him to the emergency vet to stop the vomiting. They did a full exam, x-rays, and fecal test; all came back normal. They also gave Leopold and IV with fluids due to dehydration. Leopold was put on anti-vomit/nausea medication, anti-diarrhea medication, and Prescription Diet food as soon as he could eat again. Upon doing research I discovered Taste of the Wild dog food, produced by Diamond dog food brand, who also produces Kirkland dog food, has had reports of other dogs experiencing the same symptoms.	3.5	Years	Bulldog - French	Dog	28.5	Pound

<a href="#">EON-321051</a>	6/20/2017 14:56	Milo's Kitchen Chicken Jerky Recipe	<p>My daughter came to visit me with her dog (b) (6) on (b) (6). He was a healthy, active, playful dog never had any health issues. I had bought the Milo's Kitchen Chicken Jerky Treats that Wednesday the 17th. When he came he was excited &amp; jumping &amp; happy. I opened the bag of the the Chicken Jerky Treats &amp; gave him one on the (b) (6) which he ate immediately (my daughter does not give her dog treats). Saturday I gave (b) (6) another treat just 1 &amp; we had noticed he was breathing a bit differently but we didn't think too much of it. On Sunday morning around 8:00 a.m. he was panting for air was having trouble breathing. I immediately called our vet &amp; my daughter took him in at 9:30 a.m. on the (b) (6). The vet could not distinguish what the problem was said it could be his heart, gave him medication. My daughter returned to my home at approximately 10:30 a.m. I put (b) (6) in the dog bed to lay down. 15 minutes later when I looked at him he was 1/2 off the bed &amp; 1/2 on the floor breathing so heavily &amp; suffering. His tongue turned a grayish color, he had a white foam coming out of his nose &amp; mouth. suffered for over 1/2 hour &amp; then DIED. How in the world could this happen? My dog who is (b) (6) sister (b) (6) also suffered health problems &amp; was taken to the vet &amp; the 1st thing she asked me if (b) (6) ate anything different in her diet. YES The Milo's Kitchen Jerky Treat. She was admitted for 4 days on an IV they could not figure out what caused this, she was given a blood transfusion. She is still not herself she is on 4 different medications now &amp; has been taken back to the vet for blood work.</p>	9	Years	Chihuahua	Dog	9	Pound
<a href="#">EON-321024</a>	6/20/2017 12:44	Digest-Eeze Denta-Pro Premium Oral Care Chews Medium	<p>My dog became violently ill with vomiting (approx 20 times in 2 hours), diarrhea, internal bleeding and loss of appetite after eating this rawhide chew. He went to the vet for bloodwork after the initial vomiting and later to have a stool sample tested when his stool turned black. The stool was sent out for analysis and blood was confirmed to be present. His eyes were dull and he is only now getting better with treatment for the internal bleeding. There was nothing else given to him out of the normal food he eats. There is a recall for this company but when I called they were very rude to me and I'm not sure if they even took down my information as they indicated this batch was not part of the recall. His symptoms match the expected effects of eating a contaminated chew exactly as described on their website. The chews are under the name of "denta-pro" Digest -eeze, (b) (6) Animal Health, (b) (6). Lot AH16 025, Exp 03, 2019. I think this company needs to consider whether this batch should be included in their recall. They made my dog very ill and he is only starting to recover a week later. He couldn't eat anything and this was a very scary event for all of us.</p>	4	Years	Terrier (unspecified)	Dog	22	Pound

<a href="#">EON-320950</a>	6/20/2017 4:32	Weruva Cats in the Kitchen Kitty Gone Wild Wild Salmon Recipe Au Jus	I purchased Weruva canned cat food, fish. My cat refused to eat the food after his first serving. He developed severe gastrointestinal upset, vomiting and diarrhea. I looked at the food more closely, opening several cans leftover, and found large bones. They were fish bones. I consulted an expert in fish, and he identified the bones to be jaw bones, ribs, and vertebrae. Most concerning was the large, thick jaw bones which were not able to be cut with a knife, and were solid and thick. Next, the ribs were needle sharp, causing a prick to human skin. The vertebrae were still connected, like a chain link. I contacted Weruva's "owner" who was nice, but denied the claim, stating that minimum bone is in the product. I warned him of the serious choking hazard and potential injury to animals, and he still did not appear to address the problem. I have several cans left from the 24 pack case. The problem has also been reported to Amazon where the company sells it (company president admitted they sell off Amazon) and Amazon continues to sell it. PLEASE VIEW PHOTOS ON AMAZON by searching: "WERUVA KITTY GONE WILD CAT FOOD". It's a pink label can.	10	Years	Turkish Van	Cat	9	Pound
<a href="#">EON-320949</a>	6/20/2017 4:16	Taste of the Wild Pacific Stream Puppy Formula with Smoked Salmon	I have been using the same food for almost one year. Taste of the wild puppy stream, smoked salmon. I noticed that this particular bag smelled very pungent but didn't think much of it. After feeding it to my dog, he has had vomiting, diahreach and mucus stools. I have had to put additives in his food to get him to eat it. After learning online that there are many other dogs in my area that are getting sick off of this particular brand, I have discontinued feeding the food to him.	11	Months	Other Canine/dog	Dog	49.7	Pound

<a href="#">EON-320454</a>	6/16/2017 15:12	Alpo Prime Cuts Savory Beef Flavor	<p>my dog(s) started having runny stools &amp; were throwing up, I could not figure out the issue, their diet hadn't changed.</p> <p>then the morning of (b) (6) I discovered the problem. There was a dead rat in the container of Alpo Prime Cuts and NOT dead like it entered the container once inside our home, dead like either packaged that way or alive when packaged &amp; died while on the shelf. My dogs seemed to be getting better once the food was removed and replaced, however my (b) (6) threw up again the morning of (b) (6), I took her to after hours for help after getting home that evening b/c she couldn't walk &amp; was laying in her own urine. The vet examined her that night &amp; she was admitted w/a fever of 105, the vet administered cool IV fluids for overnight &amp; advised they would be able to run blood tests first thing next morning. On (b) (6) the vet called me at 07:45 advising that (b) (6) has pancreatitis &amp; they were going to do all they could. On my way into work that morning I (thankfully) went by to see my baby girl and she wasn't doing good but the vet advised they would do what they could &amp; monitor her throughout the day, but promised not to let her suffer, we spoke that evening and (b) (6) was holding her own, but the vet called at 07:31 on (b) (6) to let me know that my beloved (b) (6) had passed. I was and am devastated. It's been 2 weeks now, time to share has come.</p>	12	Years	Other Canine/dog	Dog	25	Pound
<a href="#">EON-320084</a>	6/16/2017 11:04	Simply Nourish Source Adult Venison & Chicken Recipe	<p>On 6/15/2017 I purchased a 24 pound bag of Simply Nourish Source Venison &amp; Chicken Recipe dog food with an expiration date of JUL 08 17. When I opened the bag the top of the bag was covered with dusty webs and some of the dog food clumped together. I contacted Pet Smart, the manufacturer, at 1-888-839-9638 and spoke with a supervisor named (b) (6). She suggest this might be a problem with only one store, I feel this is a supply problem and dangerous to animal and even people. I don't know what causes this mold or how dangerous it is.</p>						

<a href="#">EON-320065</a>	6/16/2017 8:56	b.f.f.	<p>Purchased new batch of Weruva BFF food 22 April. my 2 cats have been fed this for about 2 years, evenings only. Within 4 or 5 days of afore mentioned purchase, both cats were increasingly leaving more and more of the food from new batch. Large smelly vomit. <sup>(b) (6)</sup> deteriorated rapidly, at about 1 may totally refused any and all foods, barely able to move, in pain or discomfort or nausea, seemed her back legs or hind area in trouble, gait very wobbly, could sit up with great effort but not get her hind legs to stand, refused water, 2 may took to vet, 3 may returned to vet, asked VEt to check out her walk and gait and legs, put on IV fluids for approx 24 hours, started to recover 5 may, from 5 may home nursed her with syringes of water every half hour or so and numerous small amounts of foods....I am convinced there was something bad in the recently purchased batch of weruva BFF food. Day after I collected her from VET, on 6 may received SMS alert from retailer to STOP FEEDING weruva BFF and return cans for refund. Weruva has since posted several updates of testing however no evidence that my batches were tested despite many emails and questions no direct answer, very little qualitative evidence about testing, their updates are largely emotive rhetoric, hundreds of cat owners some dead cats have formed social media support group and there is an outcry to weruva , weruva management of crisis has given me about 4 different email changes since 6 May to communicate with, now asking me if I think thiamine deficient to fill in a questionnaire, even though i already told them everything at least once and now seem only focused on what appears to be a small batch that they claimed thiamine deficient ....also think only that batch was further tested for other issues and not the rest....also, my cat was almost dead in the 5 days before weruva released its "remove from shelves" instruction to retailers...so nobody would have even thought to test for thiamine deficiency yet now they focus on that...very upset also at lack of social responsibility...its more than enough that cats have died, mine almost died and I fear for subsequent health risks and costs....</p>	9	Years	Domestic Longhair	Cat	4.5	Kilogram

<a href="#">EON-320030</a>	6/15/2017 18:00	Nylabone Nutri Dent Complete	<p>I had a very unfortunate incident with Nylabone's NutriDent Complete, (parent co. Central Garden &amp; Pet.) UPC code: 18214 82996 (Best by 10/24/19 - LT 23974)</p> <p>I gave my 24 lb. miniature labradoodle one of the bones, which he seemed to enjoy. He later struggled mightily to 'go', and I actually had to physically intercede to 'unstick' what was going on. I thought all was well, until I happened to have a grooming date for my dog the following day, to find that he was now totally plugged up, with the bone now apparently wedged horizontally in his rectum. When the groomer managed to remove it somehow, it was a very unpleasant, explosive moment of watery diarrhea. (Had I not happened to have that groomer appt. that day with her identification and solving of the problem, I think the consequences could have been dire.)</p> <p>I contacted the company, who offered a refund, if I could provide the original receipt, which seemed absolutely ridiculous. I asked them if anyone had jurisdiction over these products and they told me that VOHC does. They misinformed me - so I now am submitting this to you, as I think my dog could literally have died from this product, that is clearly NOT as advertised on the package:  "digestible, clinically proven, natural, no artificial colors, flavor or preservatives"  (contradicted by the bright green stain, where my dog threw up on the rug!)</p>							
<a href="#">EON-319993</a>	6/15/2017 17:12	Healthy Hide Good 'n' Fun	(b) (6) ate a dog hide chew from Healthy Hide. Within an hour, (b) (6) threw up with projectile vomit. The vomit had stomach acid and chunks of the raw hide. (b) (6) threw up all over my queen bed. I had to replace the entire mattress.	2	Years	Other Canine/dog	Dog	70	Pound	
<a href="#">EON-319736</a>	6/15/2017 14:24	Blue Buffalo Sizzlers Bacon-Style Dog Treats Original	Purchase Blue Buffalo Sizzlers dog food treats. Upon opening the sealed bag the food smelled rotten, on inspection of the product white mold was everywhere on the strips of bacon type treats. My son returned them to the local PetCO in (b) (6) for a refund of the product , we took pictures of the product the expiration date was june of 2018.							

<a href="#">EON-319709</a>	6/15/2017 12:52	Dexter's Deli Sardines	<p>I purchased frozen fish marketed as sardines on 5/4/17 from (b) (6). The fish are stored in an upright freezer with an external temperature monitor that reads -4C. The fish appeared to be mostly sardines, although there were parts of fish mixed into the bag that made it hard to determine which type of fish they were. The pouch of fish was clearly marked 'not for human consumption'. Although the bag of fish says the fish are a product of the USA, I learned from the distributor that they are actually from Japan. Fish from Japan are known vectors for Nanophyetus salmincola.</p> <p>I began feeding my pup the fish from (b) (6) on 5/9/17. On 5/14/17 my pup became ill with GI symptoms. His condition worsened over the next several days and by 5/17/17 he was extremely ill with GI symptoms (severe diarrhea), lethargy, refusal to eat and drink. I brought a fecal sample to my vet the morning of 5/18/17 and it tested positive for Nanophyetus salmincola eggs. My vet began immediate treatment to save his life the morning of 5/19/17. Because this parasite does not live in the waters of (b) (6), my vet asked if my pup had eaten any raw fish. The only fish / fish product he consumed were the fish from (b) (6). The rest of his diet was comprised of non-fish sources: dry dog food (source: beef, chicken and turkey), dry Honest Kitchen Smoochies treats (b) (6) and beef green tripe (b) (6). As a result, my vet said that the fish from (b) (6) are the cause of the Salmon Poisoning Disease in my puppy.</p> <p>In addition- I do not eat fish, so he did not get in to the garbage in my single family home and get exposed to fish. My puppy had a negative fecal exam as part of his purchase exam on 4/13/17. He is my competition dog prospect, so is supervised or in a crate at all times, so did not get in to neighborhood trash and get exposed to fish. He has not been around any lakes or streams or traveled to Central // Northern CA where Nanophyetus salmincola exposure could have happened.</p>	4	Months	Shepherd Dog - German	Dog	45	Pound
<a href="#">EON-319653</a>	6/14/2017 22:08	Digest-eeze Beefhide Bones	<p>Our puppy has had vomiting on and off for many months. We believe it has been caused by digestive-eeze rawhides. We have taken her to the vet on several occasions for this but no other reason was found. She also has extremely red eyes, unsure if this rawhide would be the cause.</p>			Terrier - Boston	Dog		

<a href="#">EON-319479</a>	6/13/2017 22:56	Animal Party Cocolicious 95% Poultry I'm Organic Turkey with Coconut Oil, Vitamins & Minerals	<p>On Thursday morning, June 8th 2017, I opened a new can of CocoLicious Organic Turkey and measured out 1/4 cup to give to (b) (6) which she ate. I put a dog food lid on the can and put it in the refrigerator. That evening around 5:00 when I opened back up the can to feed her again, I saw a large, round black object in the middle of the can embedded in the meat. I immediately showed it to my husband and he thought it was mold, but we both couldn't really tell. We unfortunately were not thinking as we threw the can away disgusted by what we saw and opened another fresh can of CocoLicious Organic Turkey and Chicken. (b) (6) ate some of her 1/4 feeding that evening, but only about half (which is unusual for her). The next morning at feeding, she wouldn't eat at all at her feeding. Around 4:00 that afternoon on Friday June 9th, she started vomiting and had consistent diarrhea, which started to turn to bloody diarrhea around 8:00. By 12:00 that night we took her to an emergency vet clinic in (b) (6) (as we were on vacation) and she was diagnosed with hemorrhagic gastroenteritis. They kept her until 8:00 Saturday morning on IV fluids and medication and we picked her up so we could travel back to (b) (6) We proceeded to take her for a follow-up appointment with our own vet once we returned to (b) (6)</p>	10	Years	Chihuahua	Dog	5.4	Pound
<a href="#">EON-319449</a>	6/13/2017 17:24	Dave's 95% Premium Beef	<p>An owner reported to me that a particular batch of Daves 95% beef canned dog food had a white substance that appeared to be mold in the bottom of two cans that he had opened. He sent me pictures of the contents of the can and pictures of the lot and code from the bottom of the can. This is a very good client who has been with us for a long time and whom has never made a complaint. I opened one of our cans from inventory of the same lot and found the same substance inside. I immediately pulled and quarantined all of our matching product. I called Dave's and reported the problem on May 23rd. One week ago after many calls to Dave's, I received a call back from a person telling me that the manufacturer had finally responded to their inquiry and that the substance was probably just fat. Never before has this substance been observed in a can of Dave's by us or by anyone that we know of and never again in any other lot have we found the same. I explained to Dave's representative that I would need a better answer and that the substance should be tested. I have not received a call back. I assume nothing will be done and in the meanwhile, this product continues to be sold by other retailers. I am concerned for what this substance may be. It does appear to be white mold but I have no idea what it is. I am concerned and feel like Dave's pet food company and their manufacturer is not. Please help.</p>						

<a href="#">EON-319437</a>	6/13/2017 16:44	Exer-Hides Munchy Dumbbells Rawhide with Chicken	On Wed. evening I gave her a new type of chew bone, Exer-Hides dumbbell chewy bone, purchased at Walmart. At 4:30 in the morning she woke up and threw up the pieces of bone. She also exhibited wheezing in pain from her stomach area in distress. I had to take her into emergency and they found she had a fever, was becoming dehydrated, and her liver test scores were off the chart. I had to leave her there for more testing and to keep her on a drip to deliver the liquid and medicines she needed. I then had to pick her up in the morning to take her to her normal vet, she stayed all day again on drip. More tests, including an ultrasound. Her Dr. called me and told me that she didn't think she was going to make it because her liver tests had risen even higher. I brought her home with all the medical care instructions that could be done at home, I didn't want her last days to be spent in hospital. Little by little she is getting a bit better each day. She had a check up yesterday with the vet, and she was completely surprised that <sup>(b) (6)</sup> was hanging in there and doing better than she would have though possible. She also suggested to me that I should fill out a formal complaint against the dog bone distributor, Walmart, due to the opinion she had that it was the bones that caused this whole situation. She also said she would stand behind me all the way, and to keep my receipts in case of a class action.	7	Years	Dachshund - Standard Long-haired	Dog	8	Pound
<a href="#">EON-319379</a>	6/13/2017 12:16	Healthy Hide Good 'n' Fun Triple Flavor Chews	Vomiting, Severe Diarrhea without knowing the reason. June 11th, 2017 around midnight I received an email from Wal-Mart notifying me of a recall on this product and records indicated I had recently purchased one or more of the items. Later, in the morning, I received another, more detailed email from dogfoodadvisore.com of a more detailed summary of the problem. A CHEMICAL CONTAMINATION of Quaternary Ammonium Compound in the RAWHIDE of the Treats. 1 dog had a minor reaction. My other dog progressed to vomiting and diarrhea with blood, SEVERE lethargy, and not eating. This dog IS NOT recovered, SLOWLY at best, a LITTLE IMPROVED, on 3 medications. So actually, the next question is not totally accurate, but the best of what is listed.	3.5	Years	Mixed (Dog)	Dog	36	Pound
<a href="#">EON-319355</a>	6/13/2017 7:36	Purina Pro Plan Savor Adult Shredded Blend Beef & Rice Formula	I purchased Purina Pro Plan Adult dog food yesterday and and I went the this morning to grab a scoop of food to feed my dogs. When I was getting a scoop of food I notice that there was some fly larvae in the food. The food container I put the dog's food in was completely empty so there was no chance it was contaminated by the container. When I saw this, I immediately threw away the food.

<a href="#">EON-319123</a>	6/10/2017 10:44	Alpo TBoyz Porterhouse Flavor	Went to the store to get my dog some treats so I decided to try the alpo tbonz steak treats. Gave my dog one treat and within less than a n hour she began to vomit and she has not stopped yet . This was around 2pm on 06/09/17 and it is still not stopped. My dog has never thrown up and she is beginning to get weak. This product is no good.		6 Years	Pit Bull	Dog		
<a href="#">EON-318888</a>	6/8/2017 21:08	Beneful	I had this dog for about 6 yrs and full of energy too much to be exact way to much . So one day the dog was not himself lying down guarding his stomach and not eating and having diareah vomiting eating grass ..after a few days the dogs condition got worse was still getting up to go outside but was not able to urinate , he attempted to but nothing was coming out . Two days later he past not knowing if someone posioned him from my area.. now this was last fall and my other pitbull got sick was showed the same symptoms and I proceeded to give him a large bowl of milk and not knowing if this was a help he was better after a few days .. plus he was drinking plenty of water . Not sure if the dog who past was drinking any.. now my 3 rd dog is presently sick and showing the same symptoms and I have to hand give him water . I have him milk twice by cap full of a water bottle and he vomited twice .. currently he's still sick and not looking good . All 3 dogs have been eating the same food and not till now I put the puzzle together.. after doing research on the internet and consumer reports.. hopefully this dog which is a small 8 year old yorkie will be ok ..		7 Days	Terrier - Yorkshire	Dog	10	Pound
<a href="#">EON-318599</a>	6/8/2017 0:16	Pedigree Adult Complete Nutrition Roasted Chicken Rice & Vegetable Flavor	I took my pet to the veterinary because of unusual behavior, and signs of possible of allergies. However the Doctor was not able to give me a precise answer as to what it could have been. And the following day she only got worse. Since she's sick, I have been giving her soft pet food. And today as I tried to soften her food with some water I found many small hairs scattered in her food, and some even stuck inside her food. This disgusted me very much, and most importantly concerned me because of my pets health. I want to clarify that the hairs were not just in a couple of her food pieces, but I found many more in the rest of her food inside the bag. She has been eating Pedigree Adult Pet Food for years now, and we have never had a problem with it. I honestly think that she's has been eating that for various months, and her body is reacting to the amount consumed, reason why she is sick. I have spent more than \$500.00 in exams,consultations, antibiotics, and injections. I certainly hope that justice is made. And I am sure that if other pet owners found what I did they would be greatly worried for their pets health. This is truly alarming.		4 Years	Poodle (unspecified)	Dog	13	Pound
<a href="#">EON-318594</a>	6/7/2017 20:08	Pedigree Adult Complete Nutrition Chicken Flavor	Bought new bag of Purina Pedigree Dig Food... he seemed reluctant to eat. He finally ate but wasn't eating normal 4 cups a day, not even full 2 cups. Started having uncontrollable diarrhea , vomiting and lethargic gave him two teaspoons of pepto still running to bathroom. Acting hungry, gave fresh bowl of Pedigree turned away. I have him some other of his food that I had he ate every bite. Seems to be feeling better. Didn't know who to report this to but my dog has been really sick and distressed for about 3 days. He has been on Pedigree since a pup. But this bag he doesn't like and it made him sick!!!		7 Months	Shepherd Dog - German	Dog	65	Pound

<a href="#">EON-318588</a>	6/7/2017 18:52	Cesar Classics with Turkey in Meaty Juices	I found cardboard in my dogs food. They almost choked on it. I have pictures!						
<a href="#">EON-318539</a>	6/7/2017 11:12	Friskies Savory Shreds with Ocean Whitefish & Tuna in Sauce Friskies Tasty Treasures with Cheese with Ocean Fish, Tuna & Cheese in Sauce	Purchase a box of Friskies Shreds from SAMs Club about two weeks ago. Cats started vomiting - sometimes with food, sometimes bile. Took us a while to figure out that it was two types - Ocean Whitefish & Tuna in Sauce, and Oceanfish, Tuna & Cheese in Sauce. Other varieties - beef and turkey - did not seem to cause problems. Have stopped giving the cats these fish varieties and vomiting has stopped. No other changes in diet or environment.	13	Years	Siamese	Cat	11	Pound
<a href="#">EON-318525</a>	6/7/2017 9:20	Royal Canin Veterinary Diet Feline Renal Support E	<p>Consumer (b) (6) could not enter this complaint via IE 11, so she sent the information to AskCVM. The information was forwarded to me and I am entering the information on her behalf. -- Jackie Queen</p> <p>Product:</p> <ul style="list-style-type: none"> <li>Royal Canin brand Renal Support E Veterinary Diet for Felines, 5.8 ounce <ul style="list-style-type: none"> <li>UPC 0 30111 44185 0</li> <li>Can code (inkjet on bottom of can): Best By 03222019 1747 712C2NSC1 17:47 RFRL</li> </ul> </li> <li>Can is roughly a 306x109, two part can with a pull tab top.</li> </ul> <p>Issue: Can is labeled with a wrap-around label. The can is seriously dented with some significant creasing although it does not have any sharp creases. The dents have misformed the lid sufficiently that it may have affected the seal at the lid or seam. It did bulge a bit, makes a flexing sound and overall the can behaves like a flipper.</p> <p>Product was purchased as a case of 24 cans on a cardboard tray with plastic shrink wrap. Most of the cans are dented but not as severely as this. The firm has a post-process can handling issue that appears to happen before labeling (the label is totally intact with no tearing to indicate mishandling post label application).</p> <p>Result: I am filing this complaint but will not feed it to my cat. So no repercussions/illness, etc. for her. I will hold onto the can for a period of time so if you want me to send it to you or a lab, let me know. I have not yet contacted the firm but will do so shortly.</p> <p>Purchase location: (b) (6) Veterinary Clinic, (b) (6)</p> <p>Complainant:</p>

<a href="#">EON-318497</a>	6/6/2017 21:52	Lotus Grain-Free Chicken & Asparagus Stew for Dogs	Opened can of dog food. It is a chicken stew. Also has chunks of chicken in it. I always check for chunks as my Yorkie is a hungry boy and just eats like there is no tomorrow. I cut or mash the chicken to make him eat slower as he does not chew the food. I tried to cut up this big piece of what I thought to be chicken and it would not cut. So I took it out of the stew and looked at it and still could not tell what it was. I ran it under water at the kitchen sink and it appeared to be a big piece of plastic. Well, I was so upset to think this was about to be eaten by my Yorkie I started to shake. Now know I am (b) (6) years old so this upset me very much. I then checked the rest of the food I had in his dish and it seemed to be fine. So he then got to eat. I called the manufacturer and left a message, texted them and also sent an email with no response. I did this the first day then today I called again and left a message and still no call back. So decided to let you folks know what had happened. I still have cans from the first batch but have decided until I hear from someone on this matter, I will use the new batch I just got from Petflow.						

EON-318481	6/6/2017 18:08	BLUE BUFFALO CO. SIZZLERS BACON-STYLE DOG TREATS	<p>I RECEIVED A 15 OUNCE PACKAGE OF BLUE BUFFALO SIZZLERS DOG TREATS, UPC#(8)4024311661(4), BEST IF USED BY DATE JUN 20 18, LOT NUMBER 43636 636S A2 O208 FROM CHEWY.COM ON 6/2/17. I OPENED THEM THE SAME DAY AND HAVE BEEN STORING THEM IN THE ORIGINAL ZIPPER STYLE RECLOSABLE BAG. TODAY, 6/6/17 (JUST 4 DAYS LATER), I EMPTIED THE CONTENTS TO COUNT HOW MANY TREATS WERE IN THE BAG BECAUSE I WANTED TO KNOW HOW OFTEN TO HAVE THE PRODUCT AUTO SHIPPED. TOWARD THE MIDDLE OF THE BAG, I STARTED FINDING MOLDY TREATS (7 TOTAL). I WAS CURIOUS AND CONCERNED, SO I SEARCHED ONLINE TO SEE IF THERE WAS A RECALL OR IF ANYONE ELSE HAD A SIMILAR EXPERIENCE. ONE OTHER REVIEWER ON CHEWY.COM ON 5/8/17 COMPLAINED THAT SHE HAD RECEIVED 2 BAGS OF MOLDY TREATS SINCE 3/17/17. SHE DID NOT INDICATE THE EXPIRATION DATE. I THEN WENT TO AMAZON.COM AND CHECKED THEIR 1 STAR REVIEWS DATING BACK TO 3/24/17. THERE WERE 6 REVIEW COMPLAINTS OF MOLD IN THIS PRODUCT ON AMAZON.COM BETWEEN 3/17 AND 6/5/17. NOT EVERYONE LISTED THE EXPIRATION DATE, BUT 3 OF THE 6 REVIEWS I FOUND ON AMAZON INDICATED THAT THE EXPIRATION DATE WAS THE SAME AS THE PRODUCT THAT I PURCHASED FROM CHEWY.COM (6/20/18).</p> <p>I INITIALLY CALLED THE COMPANY AND LEFT A MESSAGE FOR A RETURN CALL. I ALSO CALLED CHEWY.COM AND AMAZON.COM TO LET THEM KNOW MY CONCERN. I DON'T KNOW IF ANY OTHER CUSTOMERS CALLED BLUE BUFFALO, BUT THEY ARE COMPLAINING ABOUT A MOLD PROBLEM ONLINE. SINCE I DID NOT RECEIVE A RETURN CALL FROM BLUE BUFFALO IN A FEW HOURS, I EMAILED THEM THROUGH THEIR WEBSITE AND HAVE SINCE SPOKEN TO A COMPANY REPRESENTATIVE ON THE TELEPHONE. I HAVEN'T "RESEARCHED" ONLINE BEYOND THE CHEWY.COM AND AMAZON.COM REVIEWS, BUT I FEEL THERE IS A VERY GOOD CHANCE THAT THERE IS A PROBLEM WITH THIS PARTICULAR LOT OF THE TREATS. I AM STILL AWAITING A FINAL RESPONSE FROM BLUE BUFFALO, BUT PART OF THE INITIAL RESPONSE WAS "FOR MOLD TO FORM THE PRODUCT WOULD HAVE HAD TO HAVE BEEN EXPOSED TO EXCESS MOISTURE. UNFORTUNATELY, BECAUSE THERE ARE A COUPLE OF TOUCH POINTS AFTER THE PRODUCT LEAVES THE MANUFACTURER, IT WILL BE DIFFICULT TO KNOW WHERE THIS MAY HAVE OCCURRED." I AM NOT PLEASED WITH THIS INITIAL RESPONSE, HOWEVER, SHE DID ASK FOR FURTHER INFORMATION FOR HER QA DEPARTMENT AND I ASSUME THAT THEY WILL LOOK INTO THE MATTER? I AM CONCERNED ABOUT OTHER PEOPLE'S DOGS. BASED ON MY EXPERIENCE AND FROM SOME OF THE REVIEWS I READ, THE MOLD IS NOT DETECTED UNTIL YOU GET ABOUT MIDWAY THROUGH THE BAG. THIS MEANS THAT DOGS ARE CONSUMING NUMEROUS TREATS FROM A TAINTED BAG BEFORE THE MOLD IS NOTICED. I REQUEST THAT YOU FOLLOW UP WITH THE COMPANY.</p> <p>THANK YOU.</p>						

<a href="#">EON-318476</a>	6/6/2017 16:52	Nutro Ultra Large Breed	<p>I've been feeding my german sheperd Nutro Ultra for 7.5 years. About 4 weeks ago I bought a new bag and she began having unimagivable diarrhea. I took her to the vet after 10 days and got her on meds. They briefly and barely helped the situation but as soon as they ran out it was back. She began having stomach bloating and was in visible pain. After 3 weeks I took her back to the vet and got her on more meds and they had me drop her food all together and take an can food easy on the stomach. Problem almost completely resolved in 2 days.</p> <p>I've been around dogs my whole life and I'm aware of how changes in food can effect them. This is NOT the case. I began researching and finding similar stories everywhere on this occurring over the last 1-2 months. Please look into this.</p> <p>I'm not out for anything other than I feel something should be looked into and make sure that there isn't a very major wrongdoing.</p>	7.5	Years	Shepherd Dog - German	Dog	80	Pound
<a href="#">EON-318370</a>	6/5/2017 23:28	Pur Luv Mini Bones Bacon Flavor	<p>I recently bought Pur Luv mini dog bones (bacon flavored) at Petco. The treats did not expire until 2019. I started giving 1 a day to my pet (not every day) on the days that I have given her the treats, she was vomiting red chunks/ cubes. I at first was unaware of what was making her sick and so I started looking at everything: her food, toys, and treats. When I compared her vomit to the Pur Luv Mini Bones manufactured by Sentry Pet Care I noticed they were identical. I then looked up through the Internet the treats and found many bad reviews and pet owners who claim the treats made their pets very sick and in some cases even die. The treats have a red filling in the inside that is indigestable for dogs to process. As soon as I found out that the treats were deadly/ dangerous I stopped giving them to my dog and watched her behavior carefully. After not eating them and drinking lots of water she was her regular happy self and therefore I did not take her to the vet. I am filling out this report because I do not feel that something so dangerous such as these treats should be on the market. I am fortunate to have realized shortly (about a week) after I purchased the treats that they were dangerous. If I was not aware of my dogs behaviors she may very well have gotten sicker. I have been in contact with the company to take the product off of the market. I will also be contacting Petco where I bought the treats to see about them discontinuing to do business with that company.</p>	1	Years	Terrier (unspecified)	Dog		
<a href="#">EON-318357</a>	6/5/2017 19:28	Diamond Lamb and Rice	<p>Started feeding (b) (6) (American Bulldog) Diamond brand dry dog food. <a href="#">EON-318164</a>	6/5/2017 11:40	Simply Nourish Senior Chicken & Brown Rice Recipe	(b) (6) was experiencing stomach issues, extremely loose stool and frequency of defecation. We opened this specific bag of food, and she was eating it for roughly two weeks - which is the length of her symptoms. On May 23rd 2017 I scooped out the dog food to put in her bowl and found an insect crawling inside of it. I then saw webbing hanging inside the bag. Through research, we have determined that the insect is an Indian Moth Larvae. THIS IS NOT THE FIRST TIME WE HAVE HAD THIS EXPERIENCE WITH THIS FOOD. In September of 2014 our entire pantry was infested with these indian moths, and we were able to track it down to the dog food as the cause. We had to dispose of all of our food. After that incident we contacted the store, and were told that it was an "isolated incident" so we got fresh bags of food and continued to feed it to (b) (6). We realized that the larger bags of food were not air tight sealed from the factory, so instead started buying the smaller bags (which do appear to be air tight). This has not solved the problem. There are numerous complaints of this issue found on forums, blogs, and social media - yet the manufacturer doesn't seem to be concerned. PLEASE HELP. We have switched (b) (6) food, but don't want another dog getting sick!	12	Years	Dachshund - Standard Smooth-haired	Dog	16	Pound

In the meantime, am concerned that there may be more plastic in other containers, as this is not the first time this has happened (recall in October 2016 for same reason).							
<a href="#">EON-316836</a>	5/26/2017 14:56	Friskies Tasty Treasures with Cheese with Ocean Fish Tuna & Cheese in Sauce	On May 5, 2017, I fed my 2 cats ( 6 year old and 8 month old) a can of "Friskies Tasty Treasures with Ocean Fish, Tuna & Cheese in Sauce Canned Cat Food, 5.5-oz". Later on in the day, they both got sick. They vomited the food they consumed. The kitten had diarrhea. The older cat vomited 3 times on Sunday. He also vomited once or twice on Monday and Tuesday (on each of those 2 days). Although we took him to the vet on Wednesday 5/17/17, he still refused to eat his food. We tried different varieties of canned food, but he still would not eat or drink. We were very concerned, so we took him to the vet again on 05/19/17. They gave him sub-q fluids and appetite stimulant and he started to feel a little better. The following information for the cat food in question: UPC Code: 0 5000057797 2 (on the can) Information stamped on the bottom of the can: Best By: MAR 2019 ; 7071161 L1EM5 0011	6	Years	Domestic Longhair	Cat	11.5	Pound	
<a href="#">EON-316828</a>	5/26/2017 13:52	Kirkland Signature Super Premium Maintenance Cat Chicken & Rice Formula	The cat started having very loose stools and diarrhea. After a few days we took her to the vet and they could not find anything wrong but a low blood cell count. They gave us some different foods, and some pro-biotics. She recovered. As soon as we started her back on her regular food she became ill again. We remembered that we had started on a new bag of food at the time she originally became sick. We took her off the food and her symptoms cleared up.	6	Years	Domestic Mediumhair	Cat			

<a href="#">EON-316801</a>	5/26/2017 13:24	Royal Canin Veterinary Diet Canine Gastrointestinal Low Fat	(b) (6) had loose stools with mucous present for 4 days. His canned food was very dry in consistency, odorless (I did not think anything was wrong at the time). I tried adding organic pumpkin and rice to his diet with out a change in stool consistency. I also omitted his fish oil and decreased his water (we add H2O to promote fluids d/t hx of stones) and increased his bran cereal (he gets bran cereal d/t hx of high cholesterol). On Sunday evening I opened a can from a new case of food. I noted the consistency was mushy, as it had been in the past before (b) (6) suffered from bouts of incontinent loose stools. Later that evening, his stool specimen was slightly formed. By Monday morning his stool was a little more formed and he went 8 hours without having a bowel movement (typical, but while he was sick he was going every 2-3 hours). On Monday, after breakfast, I brought him into the vet. He was diagnosed with colitis and given medications, antibiotics, probiotics. His stool was tested and the result was negative. He has slowly been improving since Sunday night.	8	Years	Pug	Dog	21	Pound
<a href="#">EON-316761</a>	5/26/2017 11:28	Canine Carry Outs Beef Flavor	I gave my dog canin carry outs beef flavor and in a few days she had a severe allergic reaction. Open wounds on her head, neck and ears. With yellow pus and blood. Had to call a vet. Vet said if I did not call it would have spread over her whole body. She said it had to be something given to her that was new. And those treats were the only thing new I had given her. I have pics also.	5	Years	Pit Bull	Dog	65	Pound
<a href="#">EON-316684</a>	5/25/2017 13:56	Friskies Classic Pate Turkey & Giblets Dinner	This is SECOND Report to both manufacturer and FDA--Slightly different lot number. Manufacturer denies the first report made the same morning as my 04.14.2017 First FDA Report ICSR 1065390. Regardless, these same two shelter cats have had this same product (different lots) successfully without incident since the 04.14.2017 FDA and Manufacturer Report. TODAY 05.25.2017 BOTH cats again refused to eat this same product (not even taste it) x 2 cans Different Lots this time (Best By 2019 70031159 L64051736 AND 0031159 L64051735). Each can slightly different lot. Fifteen minutes after refusing these Turkey and Giblets Pate, they dove right in when given the Salmon Pate. This rules out any issues of illness with cats, etc. This is the very same scenario that happened April 14, 2017 for which I spent lots of time sharing with Manufacturer and provided my contact info; the manufacturer did NOT follow-up with me from the April 14, 2017 report as promised. TODAY, the manufacturer stated I did not need to save the cans as they did in April.						
<a href="#">EON-316509</a>	5/24/2017 17:28	Taste of the Wild High Prairie Puppy Formula with Roasted Bison & Roasted Venison	Fed 6 dogs food. 4 puppies 2 adults. 3 of 4 puppies died. The puppies had these symptoms: diarrhea, vomiting, blue gums, locked jaws, unable to move. The adults had these symptoms: loss of appetite, depression, ear hair falling out. None of the dogs will eat ANY dry dog food anymore we have tried other brands.	8	Weeks	Maltese	Dog	3.5	Pound

<a href="#">EON-316090</a>	5/22/2017 20:20	Friskies Classic Pate Ocean Whitefish & Tuna Dinner	(b) (6) although classified as geriatric, was very much a kitten at heart and very playful, vocal and loved to cuddle. This changed immediately after feeding her Purina Friskies Whitefish & Tuna Dinner Pate. She started vomiting, which led to bloody diarrhea, panting, arching her back and crying/yowling. She hid from us, which is completely unlike her. She also had a fever, which I have never felt in an animal and I worked as a veterinary assistant while attending post secondary education. This frightened and upset our family and we took her to an emergency veterinary hospital.  The vet showed us her x-rays and I enquired about shiny specks that could be seen in feces and her intestinal wall. He was unsure what it was, but also noticed it.  \$700 later, we took her home and were given antibiotics and pain killers. She is not the same cat. She is lethargic, groaning, not eating or drinking and hasn't had a bowel movement or urinated since the day before. We have been told to prepare for the worst if the medicine doesn't work. I believe there is a direct link to the food she ingested seconds before.	13	Years	Domestic Shorthair	Cat

<a href="#">EON-315851</a>	5/22/2017 8:24	Solid Gold Green Cow Beef Tripe	<p>My dog had been eating SolidGold brand "Green Cow Tripe" canned food, mixed with Nature's Variety Instinct Ultimate Protein Grain Free Chicken dry food, for about 1 year. We purchase both items through Amazon.com, and thus have records of all purchases.</p> <p>On April 02 of this year we received a shipment of 12 cans of "Green Cow Tripe", and began feeding it as we normally did to our dog. We did notice the food had a different consistency and odor than it had for the previous year. I did notice that the color of the label on the new shipment was different from the old label, but there was NO OBVIOUS INDICATION that anything was changed.</p> <p>Within 1 day after feeding the new "Green Cow Tripe" she became ill, having diarrhea attacks several times each day. We followed the direction of our veterinarian for about 2 weeks, but the problem persisted.</p> <p>At this point (I admit I was a little slow) I compared the label from the new can to the old one. The ingredients were the same, but the Guaranteed analysis label changed, doubling the fat content. I am not a chemist or food scientist, but in my mind, if you double the fat content (or any other line item) something else must change in the recipe.</p> <p>We went to our local pet store and purchased several cans of a different product, "Barking At The Moon" Beef Recipe", made by the same manufacturer. We fed this to our dog that evening, and the following day her stools were normal. They continued to be normal to this day. (It has been about 2 weeks now).</p> <p>I called the manufacture, who told me "nothing has changed", and that the problem my dog experienced was "too bad". They asked me for the date code and batch number, which I gave them. They never responded. I called back to inquire where the investigation was, and the response was "we gave it to our QA manager".</p> <p>It seems to me they are not taking their responsibility seriously, and have made no effort to respond, and to my knowledge, no effort to investigate the problem.</p>	18	Months	Terrier (unspecified)	Dog	33	Pound
<a href="#">EON-315843</a>	5/22/2017 3:28	b.f.f.	<p>My cat (along with many others here in (b) (6)) has been gravely ill due to eating Weruva BFF cat food. The food was recalled in April - two weeks after my cat had been in and out of ICU and \$7k vet fees later trying to find the cause. Since then at least 20 cats are deceased and 100s of others are critically ill and relapsing. These cases have been lodged with the (b) (6) Veterinary association and have been seen across (b) (6) media. Weruva are still not admitting liability and are ignoring many requests to understand what has caused acute illnesses and in many cases death following consumption of the Weruva BFF food (batch released in March/April 2017)</p>	2	Years	British Blue	Cat		

<a href="#">EON-315812</a>	5/21/2017 18:45	Hill's Science Diet Savory Beef Entrée Adult 7+	I bought a case of her favorite cat wet food, Hills science diet savory beef entree. I bought it at Amazon.com and when I opened a can i noticed the food was runny like soup, smelled funny and it looked a weird gray colored. i tried to feed it to the cat, but she would not eat it. She later ate a bit of it, but later vomited in my bathroom floor. I thought the case I bought was damaged because the expiration date was good. I contacted Science Diet and Amazon.com, Science Diet told me to return it to Amazon for a replacement case. There were more people with my problem so I did not ask for a replacement case. I bought another case at a pet food store and it was the same problem.	9	Years	Unknown	Cat	10	Pound

Lethargy diarrhea continued. 5/19/2017 vomit became bloody, dog is being taken to the vet.</p>	6	Years	Corgi - Welsh Pembroke	Dog	36	Pound

EON-315496	5/19/2017 0:48	Blue Buffalo Blue Wilderness Chicken Recipe Adult	<p>I purchased a bag of Blue Wilderness Adult Chicken Recipe in February. It was the same brand I'd been feeding for months. The bag was opened sometime around March 1, 2017. Both of my cats reduced the amount of food they were eating once this bag was opened. I thought that it was due to warmer weather. (b) (6) started to lose weight within a week and was more lethargic. He also began drinking a lot more water. His water is fresh daily in a pet waterer, and I have been adding apple cider vinegar to my pets water for several months.</p> <p>Around March 10, 2017, he began straining to urinate and was passing bloody urine a few days later. It took me a few days to get him into the vet because he started hiding during the day in a very inaccessible spot. Around the 15th of March, 2017, (b) (6) was no longer able to urinate at all and spent 3 days at the vet with a catheter in place. He improved while there and while eating the food they provided. His PH level was high, but I don't remember the number I was told for this visit. He came home and had to go back in the next day because he was having trouble urinating again. The vet was able to get him stabilized and he spent 21 days on antibiotics.</p> <p>Within 2 weeks of finishing the antibiotics, (b) (6) was again straining to urinate and was passing bloody urine. He stayed at the vet for 4 nights (May 11-15, 2017). The vet again got him stable, eating and drinking. I brought him home and had to take him back to the vet on May 16, 2017. I picked him up today, May 18, 2017. The high urine PH is an issue that is new with this bag of food. Normal urine PH is 6.0-6.4.</p> <p>A urinalysis that was sent to IDEXX Laboratories on May 17, 2017 and results arrived on May 18, 2017. The results are as follows:</p> <p style="text-align: center;">Color - Red Clarity - Turbid Speciic Gravity - 1.043 Glucose - Negative Bilirubin - Negative Ketones - Negative Blood - 2+ High PH - 7.5</p>	4.5	Years	Domestic Mediumhair	Cat	16	Pound
------------	----------------	---	--	-----	-------	---------------------	-----	----	-------

			<p style="text-align: center;"> Protein - 2+(200-300 mg/dL)  WBC - 10-15 High  RBC - 75-100 High  Bacteria - Moderate Cocci, 9-40/HPF  EPI Cell - 2+ (3-5) HPF  Mucus - None Seen  Casts - None Seen  Crystals - 3+ AMM MG Phos (21-50) HPF  Urobilinogen - Normal </p> <p> Background on my cat. Healthy, indoor, fully vaccinated cat. Neutered at 2 years old.  Ate Kirkland brand Super Premium Maintenance Cat Chicken &amp; Rice Formula until approximately July 2016, then switched over a 4 week period to Blue Wilderness Adult Chicken Recipe. I will now be changing over to DIY Prey Model Raw as it facilitates a naturally lower PH level.  After searching I have found that there are other cats with similar issues after eating Blue this year. While I'm not usually one to submit consumer complaints, I believe that there is a problem that could already be causing death and serious injury to pet cats. </p>

EON-315487	5/18/2017 20:44	Greenbrier Kennel Club Rawhide Retriever Roll	<p>I am a Service Connected Disabled Veteran 100% (b) (6), IU. I have a Service Dog. Hes a Purebred Cocholate lab. I have had Him since he has been 10 weeks old. On May 14, 2017 my wife decided to go down to our local Dollar Tree to pick up a few Items. It Is very rare that I will enter a store at this time of day. I told my wife doesn't look like there is a lot of people so i will go in. She did her thing and I walked around. I got to the pet section. I pick up this RAWHIDE RETRIEVER Bone. I always buy my Service Dog Top of the line food. Once a week I always buy him a RAWHIDE Bone. But, always American made.</p> <p>Just the Value Of my Dog IS set at \$20,000. So, you know he's In the best possible health he can be.</p> <p>Anyway my wife pays for our stuff we get home. Later that night I asked my Service Dog If he wanted a treat. Of course he wagged and said yes with a bark.. So, I gave him the RAWHIDE RETRIEVER Bone I bought at the Dollar Tree In (b) (6) Store (b) (6).. MY Service Dog Chewed on It Two to Three Minutes tops Then he came Violently ILL. He Vomited for a day and a half just about every 20 minutes, had the shakes Nose was Hot he was lethargic. I stayed up with him for 48 hours too make sure he wasn't going to die.. When this all took place I immediately took that Poison That IS MADE IN CHINA away!!! I couldn't afford too take my Dog to the Vet Cause It was mothers Day And I didn't have the Cash on hand. So, I contacted a Friend who works for a Vet (b) (6) hours from me and she told me what to do.</p> <p>I have Never ever seen My Service Dog Sick like this... With all the Issues I have from Being a Disabled Veteran It made me worst then ever. I have Never seen anything like this I should have Did video with my phone during this ordeal..</p> <p>This RAW HIDE Treat was Poisoned!!!! It even smells poisoned.... I had threw It away. with the wrapper but, I dug it out of the Garbage HAs sauce on it. But i have it and took Pictures of everything. From my Service Dog almost Dieing on the couch for two days, Bone, wrapper, etc....</p> <p>I contacted Dollar Tree via email, and on Facebook.. I got a call to day from a service rep who left me a message..</p> <p>My Service Dog IS worth too much Money and I have too Much Invested too be playing Games with Dollar tree. I'm bringing them too Federal court. I sent the COO and President of Dollar Tree a Demand letter explaining EVERYTHING!! PLUS, Asked Him to REMOVE all pet food/treats made in China from there Stores...</p>	4.5	Years	Retriever - Labrador	Dog	98	Pound

<a href="#">EON-315480</a>	5/18/2017 17:12	Gentle Giants 90% Beef	<p>On May 8, when we got home from work, we fed our dog dinner from a can of Gentle Giants dog food (Beef). We had also fed him from the same can in the morning before when left for work, and covered the can and refrigerated it during the day. To our surprise, he was a little reluctant to eat, but eventually did eat some of it. A short time later, he began vomiting. He was very lethargic and in distress from the vomiting. When we checked the room he stayed in while we were at work, we found that he had vomited his breakfast as well.</p> <p>We tried to get him to relax and drink some water in an effort to relieve his discomfort. A couple of hours later, he went out to the yard to poo, and had a difficult time doing it. The discharge was an uncommon liquidy poo with blood. Looking around we found blood drops in a couple of locations outside where he had also tried to poo and could not.</p> <p>Because of the blood in the stool, I took him to a 24 hour vet service for care. A physical exam found nothing wrong and a test of his blood, and Xrays also came back clear. (A fecal test done a couple of days later also came back clear.) He was given antibiotics to fight any bacteria from infecting his internal organs, which he took for a week, and was put on a special diet for a week.</p> <p>When my wife was cleaning out his bowl of the unfinished food from Monday evening, she noticed that it contained a couple of pieces of small bits of blue plastic. We looked in the can and found more inside. The dog food had evidently created issues in both his throat (causing vomiting) and stomach (causing bloody diarrhea).</p> <p>I called the manufacturer twice (May 9 and 10) and sent an email to them on May 11, but they have not responded.</p>	5	Years	Papillon - Spaniel - Continental Toy (with erect ears or with dropped ears (Phaléne))	Dog	10	Pound
<a href="#">EON-315473</a>	5/18/2017 16:08	Hill's Prescription Diet Hypo-Treats	<p>We regularly feed our small cocker spaniel Hills Prescription Diet Hypo-Treats. They are too large for her to eat whole so we break the treats up into smaller pieces before giving them to her. Two days ago, I was breaking up a treat and discovered a small (1 or 2 cm long) thin piece of wire embedded in the treat. I called the customer service number on the package and spoke to a representative letting them know about the wire. She assured me they will be investigating.</p>						
<a href="#">EON-315182</a>	5/16/2017 18:36	I and love and you Whascally Wabbit Recipe	<p>He obviously had stomach issues after eating a few bites of the food. He mostly refused food for the next day and then we slowly started him back on a different variety.</p>	1	Years	Himalayan	Cat	12	Pound

<a href="#">EON-315044</a>	5/16/2017 8:52	Pet Naturals of Vermont Calming Dog Chews	(b) (6) had her annual checkup on (b) (6). All good with check up, then she received heartworm/Lyme test, then Bordetella and Lyme Vaccination and prescribed the Hycodan and Doxycycline for her slight cough which occurred about 6 to 8 times a day for the past month. By Friday (b) (6) the cough was gone after only several days into the meds. She was back to normal. Around 6 PM Friday she was trying to get a treat from me doing her dance which she always does when she wants one along with our other dog, after they were done dinner at 4:30 pm. I decide that she was ready to start a new item I purchased from Chewy.Com called PetNaturals Calming chews since she gets nervous at night and a storm moving in the weekend. I gave her the one chew and within several hours she started to pant heavy. Through the night my wife said she calmed her several times. On Saturday we noticed it was getting worst and would not eat so I contacted our Vet and was told to bring her over. I got there about 1:40 PM and she had no measurable temperature after several tries. They took her in to do X-rays and it show an enlarged Heart, Massive fluid in her Lungs and her stomach was full of air. They put her on Oxygen and the Vet made arrangements to take her directly to an emergency center. She stop breaking and they put an oxygen tube down into her but liquid started to come out, She died at 2:01PM. She had no signs of any issue's and had no problem lying down on her sides or stomach nor any issue's at her checkup 4 days prior.	10	Years	Shepherd Dog - Australian	Dog	31	Pound
<a href="#">EON-315006</a>	5/15/2017 22:04	Purina Pro Plan Savor Adult Shredded Blend Lamb & Rice Formula	Purchased a bag of purina pro plan dog food in February. In April, we found it was infested with tiny brown worms. Returned it to the store and was refunded. Thought we had possibly stored it improperly. Purchased another bag thinking it was a fluke. Contacted Purina and they responded that it was highly unusual. They sent me a few \$1.00 off coupons. Less than a month later the same brown worms appeared. This time I knew it had been stored in airtight containers. Returned it to the store and bought another brand. Googled the problem and saw MANY MANY other instances of similar findings.

Life Essentials Freeze Dried Wild Alaskan Salmon can also be crumbled onto wet or dry food as an appetite enhancer. Order Size: (6) 5 oz resealable bag. "</p>						
<a href="#">EON-314748</a>	5/14/2017 15:04	Grrreat Choice Turkey & Giblets Dinner Pate	<p>Cat at 1/3 can of Grrreat Choice turkey&amp;giblets pate, lot GC-14-700. Within 2 hours, cat was vomiting forcefully and screaming (two days later, cat still cannot meow), with watery grey diarrhea, pain screams and vomiting while eliminating diarrhea. Cat continued vomiting/diarrhea spasms (mucous only) for three hours, then slipped into coma from dehydration. Successfully rehydrated cat, he has been slowly recovering ever since. NOTE: Two other cats had access to this food and refused to eat it, even though canned food is their daily treat.</p> <p>I opened a second can in the same lot two days later to check it, it has an odd smell but no obvious discoloration.</p> <p>This brand has a dog food recall for 2017 but no mention of contaminated cat food.</p> <p>Purchased food at Petsmart # (b) (6) in (b) (6)</p>	10	Years	Domestic Shorthair	Cat	6	Pound
<a href="#">EON-314725</a>	5/13/2017 16:12	Weruva Cats in the Kitchen Fowl Ball	<p>Problems the last year - I have given this food routinely one year ago. (b) (6) became sick. I stopped and once in a while gave her the remaining cans from a case that I bought. She has been sick on and off. On 4/23 her lab work was good. I gave her one can - 1/2 can on 4/28 &amp; 4/29. On 4/30 she vomited, quit eating and labwork at vet on 5/1 was terrible. Looking back I believe her previous problems may have stemmed from this same food.</p>	5	Years	Tonkinese	Cat	6.4	Pound

<a href="#">EON-314722</a>	5/13/2017 15:44	Primal Pet Foods Freeze-Dried Nuggets Canine Chicken Formula	My dogs diet consists of Primal FD Chicken, and FD treats. 2 weeks ago I fed him and it was a new bag freshly opened. HE started to act out of character and vomitted several times and had diarrhea. I brought him to Er vet who diagnosed him with gastroenteritis and was suggested to use bland diet and stop feeding raw. 1 week ago the symptoms were still there and he had several stool tests done that contained a very rare protozoa that thrives in all climates and mainly infects raw food or water. My pet is now on Metronizadole and probiotics as this protozoa have consumed most good bacteria in his gut... according to vet this is due to the raw food source and I immediately discontinued it. MY dog is still sick and I believe it was the FD Primal as well as my vet who did several lab tests. The lot number is 1D122017 UPC 50334004324	3	Years	Terrier - Yorkshire	Dog	10.2	Pound
<a href="#">EON-314503</a>	5/12/2017 10:12	Friskies Savory Shreds with Ocean Whitefish & Tuna in Sauce	We have been feeding our three cats each 1/3 of a 5.5 oz can of Friskies (variety of flavors and textures) each morning. These were purchased at various locations including Walmart and a local feed store that has rapid turnover of the product. We began noticing that upon occasion the cats who wait eagerly for this feeding all sniff their separate dishes or take a small taste then walk away, rejecting the food. We used to think that this was just a matter of all three not liking a particular flavor, but over time we have seen that this does not correspond with the flavors. Since it is always all three cats at the same time, we now assume that there is something about the quality of food that makes them reject it. As has happened before the one cat who ate a few bites of the food this morning immediately vomited following his replacement meal.	9	Years	Unknown	Cat		
<a href="#">EON-314493</a>	5/12/2017 8:48	Nudges Grillers Made with Real Steak	Gave her Nudges Grillers Steak Treats. They didn't seem to agree with her. She started drinking a lot, had frequent urination, eventually quit eating and had loss of vision.	3	Years	Shih Tzu	Dog	11	Pound
<a href="#">EON-314490</a>	5/12/2017 8:20	Nudges Grillers Made with Real Steak	I started giving him Nudges Grillers Steak Treats. He got extremely thirsty, had frequent urination, lost his appetite and then went down with labored breathing. I took him to the ER Vet and had blood work and x-rays done. He had a high fever, diabetes and more. Had to put him down. This was after I had to put my other dog down for the same symptoms 3 weeks previously.	8	Years	Newfoundland	Dog	140	Pound

<a href="#">EON-314419</a>	5/11/2017 20:16	PureVita Turkey & Sweet Potato Entrée Grain Free, Nutro Crunchy Treats with Real Mixed Berries	48 hours after I fed my two beagles both the NutriSource Pure Vita Turkey and Sweet Potato dry dog food and also Nutro Crunchy treats (blueberry), (b) (6) my older beagle threw up and continued to throw up and refuse food throughout the night and into the next morning (Monday 5/1/2017). I was very alarmed and took her to my vet. They examined her and did a full blood panel. He gave her an injection of cerenia for nausea and also prescribed cerenia for the next 4 days and also prescribed Flagyl for several days and told me to feed her nothing but chicken and rice for the next 4 days. Several hours after the nausea shot, (b) (6) felt well enough to eat some chicken and rice and kept it down. Later in the evening, when I gave (b) (6) a little more chicken and rice and fed the Pure Vita to my other beagle, (b) (6), (b) (6) stole some of (b) (6) Pure Vita before I could stop her. Within the next half hour, (b) (6) threw up the Pure Vita. (b) (6) did not finish her Pure Vita meal, which is highly unusual for her (a greedy beagle). By the time bed time rolled around, (b) (6) would not even accept a bite of chicken, which she normally grabs eagerly from my hands. By morning, (b) (6) was better and keeping down her chicken and rice. (b) (6) threw up bile in the morning, so I took her to the vet that day, 5/2/2017. He examined her, did a full panel blood work and gave her the same medications that he did for (b) (6). It took about 12 hours for (b) (6) appetite to return. Both dogs slept alot for several days. (b) (6) blood panel revealed she had a case of pancreatitis, but (b) (6) bloodwork was negative for pcreatitis or anything else that could be determined by the lab. It took my beagles about 4 to 5 days to recover and they still seem to have less energy than normal. They are still eating chicken and rice. I am currently deciding which brand of food to use from here on out, but I will not be feeding the Pure Vita or the Nutro treats I purchased on April 28, 2017.	9	Years	Beagle	Dog	38	Pound
<a href="#">EON-314199</a>	5/10/2017 17:28	Purina Dog Chow Complete	opened a brand new bag of Purina Dog chow and fed it to him , he was dead the next morning.	8	Years	Rottweiler	Dog	120	Pound
<a href="#">EON-314167</a>	5/10/2017 12:24	Member's Mark Exceed Lamb & Rice	(b) (6) ate breakfast (which is 2 cups of food) at 6:30am I let him out to go potty and he stayed outside for about an hour. He came back in the house and laid down in his bed. At that time I left for work. Upon returning home (b) (6) had had numerous bouts of diarrhea and thrown up all over my living room floor. I fed him dinner at 6:30pm and let him back outside as he seemed like he could not wait to go potty. Through the night he had more bouts of diarrhea and vomiting. I talked with the vet and she advised there was some type of toxin in the food. I bagged up the food and plan to return it to the store. I noticed the food had a chemical odor to it.	10	Years	Weimaraner	Dog	90	Pound
<a href="#">EON-314147</a>	5/10/2017 12:16	Purina One Smartblend Lamb & Rice Formula Adult, Purina One Smartblend Chicken & Rice Formula Adult	Discovered my dog had cancer at age 5 (almost 6), he was diagnosed with cancer at age 6, and learned that this type of cancer normally occurs in dogs 8 years and older. This week I found how contaminated his pet food is, I've used Purina One consistently since I bought him in 2010. Some of the contaminants cause cancer leading me to suspect his 2 surgeries to remove tumors were caused by his pet food (Purina One dry dog food).	7	Years	Shar Pei	Dog	55	Pound

<a href="#">EON-314142</a>	5/10/2017 12:04	Cesar Classics with Chicken & Beef in Meaty Juices	On May 6th , 2017 I opened a container of dog food and when I started to break it up to feed him I found what looks to be complete animal body parts in it . Possibly an Ear or Snout etc. Product Description: Cesar Classics with Chicken & Beef IN MEATY JUICES canine cuisine 1330025 A1 5. Type of container: Plastic square container with Foil pull back lid. Product Unopened intended: stored at room temperature. Lot number/Best by, best before or expiration date: BB 013019 21 3 705CKKCG 0321. UPC code:0 23100 01409 8. Net weight: 100G (3.5 OZ) Purchase date: Month of Apri 2017. Location where purchased: appx. 97% of the time I buy dog food at Target (b) (6) . Food was stored in kitchen cabinet , no preparing needed just opened and started to break up with edge of empty container it came in when I found animal parts. Description of the problem with the product : Foreign object found in the product (what looks to be a snout or an ear and other pieces). I did not feed it to my dog so my dog did not consume the food product.						
<a href="#">EON-314135</a>	5/10/2017 11:08	Taste of the Wild High Prairie Canine Formula with Roasted Bison and Roasted Venison	Started new bag of food which is the same brand she has eaten since near birth. She started having bad diarrhea with blood that evening. Took her to the veterinarian the next morning. Vet recommended we switch her diet for a couple of days to boiled chicken and rice. She immediately started feeling better and the diarrhea stopped. After a few days we started to reintroduce her dog food back to her ( same bag). On the first evening she was back to just dog food the diarrhea started again with vomiting ( no blood this time in diarrhea). The diarrhea was more violent than the first time so we immediately took her off the dog food. She continued to vomit and experience diarrhea all night and continued in the morning. We brought her to the pet hospital that day where she is now stable. If she is able to hold down a controlled diet at the pet hospital, then she can come home today.	33	Months	Poodle - Standard	Dog	68	Pound
<a href="#">EON-314072</a>	5/9/2017 16:32	Hartz Oinkies Pig Skin Twists Original	I purchased the Hartz Oinkies pig twist chew treats on Friday, 5/05/2017 and gave my dog 1 chew treat around 9:30PM that evening. Approximately 30 minutes later - Both of her eyes were swollen shut and her entire muzzle was swollen as well. She appeared to be in tremendous pain and used her feet to scratch her entire face non-stop. Both eye lids were bright pink and her lips were bright red. She had only consumed approximately half of the pig treat. I was instructed by the Vet to give her 50mg of Benadryl immediately, which I did at approximately 10:15PM. She was able to breath so, I stayed up with her all night and monitored her until I could take her to our Vet the following morning. On the morning of Saturday, 5/06/2017, She was still very swollen (Face/mouth) and she vomited on the ride to the Vet. The Vet gave (b) (6) an injection of 3mg Dexamethasone & 50mg of Benadryl at the time of our visit. I was instructed to give (b) (6) 1 tablet of Prednisone 10mg by mouth once daily for 3 days, starting on 5/07/2017; then, give 1 tablet every other day until gone. (b) (6) also instructed me to continue giving (b) (6) 50mg of Benadryl in addition to the Prednisone to prevent flare up. Please note, prior to this incident - I'd been giving my dog these treats since she was 6 months of age and on average, she would consume 3-4 of these pig twist treats each week as a reward. This is the very first time she's ever had an allergic reaction to ANYTHING she's eaten, EVER.	46	Months	Pointing Dog - Hungarian Short-haired (Vizsla)	Dog	42	Pound

<a href="#">EON-314024</a>	5/9/2017 11:20	Pedigree	After consuming pedigree gravy on 6 may my pet felt lazy for entire day and didn't consume anything the whole day. When we gave him gravy once again on 7 may, he again got extremely lazy. He didn't perform any activity for two long days though he has always been an active dog. I suspect presence of something in the dog food that makes the dog inactive and dizzy.	10	Years	Shepherd Dog - German	Dog		
<a href="#">EON-313936</a>	5/8/2017 16:04	Meow Mix Irresistibles Soft with Salmon	<p>I am enclosing here a copy of the email I sent on April 6, 2017 to the manufacturer of Meow Mix cat treats, at jmsmucker.com. They responded with an email asking only that I call them. They did not provide me with any information that I requested.</p> <p>To: Smuckers</p> <p>My two kitties ate your product, Meow Mix Irresistibles soft salmon flavor treats, last Friday evening for the first time. The next morning one kitty (he ate 15 treats the night before) threw up his whole breakfast, and has been sick with vomiting ever since. He has gone poop only ONE time since then, on Tuesday, and he cries, drinks, and then vomits almost every meal.</p> <p>Our second kitty ( (b) (6) ) is in much worse shape! He ate about 10 treats that night, refused his breakfast and did not drink or eat anything Saturday. By that night he was limp in our arms with a fever and we took him to the emergency vet clinic near us at 7:30 am (Sunday). Although he was diagnosed with an upper respiratory infection, he continues to refuse ALL food and drink, and did not drink or eat for THREE DAYS (Sat, Sun, Mon). He has not gone poop even one time in SIX DAYS. His health continues to deteriorate since he is not eating, and drinking very little, despite anti-nausea and appetite stimulant medication.</p> <p>Our (regular) vet suspects stomach inflammation from the treats, and we do, too!</p> <p>We are very concerned to discover what exactly in these treats has harmed both of our cats. She tells me that your company is required to inform us of any suspected poisons or irritants that may have been discovered to be in this product, OR that other customers have reported for this product.</p> <p>(b) (6)</p>	17	Years	American Shorthair	Cat	9.7	Pound

<a href="#">EON-313817</a>	5/8/2017 4:04	Vital Essentials Frozen Duck Patties, Tucker's Raw Frozen Pork-Beef-Pumpkin Formula, Primal Pet Foods Freeze-Dried Nuggets Canine Lamb Formula	<p>I have had several purchases from Jefferson Feed in (b) (6) that have had adverse affects on my dog's arthritis, thirst and ability to concentrate his urine. I've been cautious since then, and I've noticed a problem with the Primal Raw Freeze-Dried Nuggets (I stopped buying it - the nuggets always had moisture of some kind &amp; affected my dog's allergies &amp; symptoms mentioned above). Within days of purchases, they would grow mold. It was baffling because the first few batches he ate really improved his health - including his skin, coat and arthritis. Also, the appearance of the nuggets differ significantly from the samples I received in the store, the initial bags he first thrived on and the images on the website. The worst part was seeing that my dog could barely walk after a day of eating the nuggets I described.</p> <p>I moved on to Raw Frozen products, and had success with my first bag of Tucker's. After that, on 4/28, I purchased a bag of "Vital Essentials Frozen Duck Patties". I drove straight home and put the bag in the freezer, then later that evening, I opened the bag to remove a patty to thaw for my dog's breakfast - the smell was AWFUL. I was surprised by that but then convinced myself that maybe it was just a different brand...</p> <p>The next morning the stench was unbearable (now that the patty was completely thawed). I took photos of the patties, which looked misshapen &amp; had ice on them, and came to the conclusion that they must have been thawed at some point. I returned them to the store and tried to cook for my dog for a while.</p> <p>Today (5/7) I decided to give it another try with Tucker's and went back to Jefferson Feed. I bought a bag and noticed a strange line on all of the bags in their freezer - it looks like they may have been opened before.</p> <p>When I came home, I took out a patty to thaw it and noticed a strange pattern on the patties, which also looked misshapen, and the bag smelled of meat. In addition, the plastic the meat is wrapped in does not appear as it did in the last batch or like it does on the website - the corner in which you should be able to peel it open was sealed shut and there was lot of ice - again, as if it had been defrosted and refrozen at some point.</p> <p>I couldn't risk feeding it to my dog - again.</p> <p>Before this, there were issues with Fromm's canned food, Orijen Senior Dry Kibble and Taste of the Wild Kibble, as well. I don't want to go into it, but it seems as if someone is tampering with a large number of products - maybe it is happening at the distributor - I don't know... I just want to be able to buy dog food again without my dog getting sick. His scalers in his eyes gets swollen and red, he's bitten his paw until it is raw. I am at a total loss as to what is happening, but someone needs to do a serious inspection - and not just on the frozen raw food. Please. It's at all of their stores. I am going to put the date I purchased the Vital Essentials, because I honestly don't know when this began.</p> <p>My dog first got sick, had lab work and urinated in his bed over a year ago.</p>						
			<p>Upon peeling back the open tab on a can of organix butcher and bushel wet dog food the lid blew off the can. It sounded like a gun shot. Most of the food remained in the can and was bubbling as if it had been heated on a stove. This was a recent order and was not expired.</p>

Hi Prairie Dog:

I am writing to alert you about a \*MOLD\* problem in your Grassfed Lamb Smokehouse Jerky (photographs appended). Exp. 03/10/19

Grassfed Lamb Smokehouse Jerky  
Expiration date: 03/10/19

I ordered your product on April 30, 2017 from Petco.com. The product arrived yesterday May 4, 2017 with visible mold.

I did not open your product's packaging. I have a severe mold allergy, let alone mold is a toxin as-is. Understandably, there is no way that I am further exposing myself or my dog to this toxin by opening your packaging.

The product was well-packaged and buffered in the shipment box from Petco.com. It arrived absent of damage. There were no other products in the shipping box. Shortly after discovering that the product was moldy (see photographs), I called Customer Service at Petco.com and received a full refund.

I am writing to alert you of this quality problem so you can take immediate action to ensure no animals or people are harmed by your product.

Thank you.

Sincerely,  
(b) (6)

\*Email includes 6 photographs of the product taken on May 4, 2017.

----From here, who knows who else is receiving packages of molded treats? Who is currently feeding their dog these treats? And how are they moldy now when they don't expire for almost two years?

CORRECTION --- Please note: Throughout my email correspondence with Prairie Dog Pet Products and attempted email correspondence with Petco (the second email sent to them on May 5, 2017 also bounced back), I mistakenly referred to the treats as being "Grassfed Lamb." I was incorrect. The product is in fact, "Grassland Lamb."

Thank you.

Thank you!

<a href="#">EON-313688</a>	5/5/2017 16:24	Canine Carry Outs	(b) (6) was fed Canine Carry Outs Beef Flavor treats several times and he vomited them up repeatedly. We thought it was maybe a stomach bug at first and switched his treats out for others but when we again fed him some and it happened each time he ate them and that was the only thing in his vomit we realized what was happening and discontinued the product permanently.	3	Years	Mixed (Dog)	Dog	70	Pound
<a href="#">EON-313579</a>	5/4/2017 18:28	Milo's Kitchen Chicken Meatballs	My dog just vomited up a chicken meatball from Milo's Kitchen brand, after this I read the ingredients list, turns out these treats contain BOTH Garlic AND Onion, both are TOXIC to dogs.	6	Months	Pointing Dog - German Short-haired	Dog	40	Pound

<a href="#">EON-313482</a>	5/4/2017 12:32	Rachael Ray Nutrish Super Premium Food for cats	Owners came home and (b) (6) was hiding. When they found her she was not using her left rear leg. She eats Rachael Ray cat food and is indoor only, she has had another broken bone in her life (toe) but is otherwise healthy. Rads : proximal oblique left femur fracture. Suspect osteoporosis. Bone density on radiograph and history of previous fracture highly indicate nutritional deficiencies. Cat only eats Rachael Rays diet.	3	Years	Domestic Shorthair	Cat		
<a href="#">EON-313349</a>	5/3/2017 14:32	Taste of the Wild High Prairie Puppy Formula with Roasted Bison & Roasted Venison	After two weeks our dog refused to eat the food. He started acting lethargic. Very quickly after he refused the food, his stomach started making very loud sounds as if he was going to have terrible diarrhea, he ended up having a bowel movement with a very strong, strange odor, no diarrhea yet. Later that night he started convulsing like he was going to vomit but was gagging and hard swallowing instead. After a few hours he started vomiting up clear fluid and later bile. No diarrhea yet either. He wouldn't eat or drink. We took him to the ER four times that night. They kept thinking it was just a stomach ache. They gave him a shot of a very strong anti vomiting medication and sent us home. He continued to vomit, hard swallow and started shaking like he was freezing. He was making this slight winy sound and breathing as if he was in horrible pain. The ER admitted him. Xrays were normal, blood work was normal, other than high white blood cells. He would not stop vomiting, they did an ultrasound, they couldn't see an obstruction. He was in the hospital for 5 days, he turned his head when they put any food in front of him. He continued to hard swallow and gag, they had him on an IV or he would have died. On the fifth day, they called a specialist. He started leaking green, very watery diarrhea that smelled very strong and odd. After a few days of leaking green diarrhea he finally ate a small piece of chicken. He is alive, thanks to the IV. I was looking to see if there were any recalls on the Taste of The Wild Food. I had just started him on a bag of the Bison puppy food about eight days prior to the symptoms. There are many other describing the same symptoms in their dogs from TOTW Bison and a fish flavor. The animals are dying. Some from total organ failure. The pet store didn't care since there is no recall yet.  <a href="https://www.consumeraffairs.com/pets/taste-of-the-wild.html">https://www.consumeraffairs.com/pets/taste-of-the-wild.html</a>  <a href="http://petfoodtalk.com/dogfoodreviews/taste-of-the-wild/">http://petfoodtalk.com/dogfoodreviews/taste-of-the-wild/</a>	3	Years	Terrier - Boston	Dog	26	Pound

<a href="#">EON-313205</a>	5/2/2017 15:12	Friskies Prime Filets with Chicken in Gravy	(b) (6) was fed the same food as the 5 others. (A 7th cat eats a special food and was unaffected). (b) (6) had been having a rhinitis flare up, for which I had gotten antibiotic drops on (b) (6). During this same time period, she was fed the food in question. Her rhinitis started to improve some, but by (b) (6) she was acting very strange: continuous meowing, pacing, not eating or drinking, not sleeping, wanting to go outside, sitting outside in the pouring rain, going to the neighbors house. All very uncharacteristic. All of this did not onset at one time, but became more pronounced over time. Since she was already on the antibiotic, I assumed that she would improve once it had time to work. By Wednesday, the (b) (6), I took her to the vet, where she received medication for what was thought to be an infection. She had a mouth full of sores, which explained why she would not eat or drink. Her kidney values were elevated. Following the meds given at the vet, (b) (6) seemed to improve a bit. However, by the next evening (b) (6), she had gotten worse. I took her to the emergency vet clinic in (b) (6) where she was admitted. Her white cell count was very elevated, her sodium levels were off the charts, causing brain swelling (and the strange behavior), her kidney numbers had skyrocketed and she was on the way to renal failure. She remained at the emergency clinic overnight. After a conversation with both vets who worked on her, I had to make the decision to put her to sleep, as her prognosis was "very slim" according to one of the doctors. When I arrived at the hospital for the euthanization, the vet assured me that I was "doing the right thing". (b) (6) took her last breaths at 1:15 pm on (b) (6)	10	Years	Domestic Shorthair	Cat	5	Pound
<a href="#">EON-313204</a>	5/2/2017 15:12	Friskies Prime Filets With Chicken in Gravy	After eating Friskies canned food, (b) (6) became lethargic. A few days later, Friday, April 21, 2017 she was unable to walk more than 2 or 3 steps without falling over and was very listless. Her eyes were sunken, pulling on the scruff of her neck indicated dehydration. She was able to drink water when offered and ate a few treats. Went for vet exam next morning (4/22) and was treated for severe dehydration, fever of 103 degrees and likely kidney infection. Was put on fluids, given antibiotics and sent home with antibiotics to begin the next day.	17	Years	Domestic Longhair	Cat	6	Pound
<a href="#">EON-313203</a>	5/2/2017 15:12	Chomp'ems Chicken Tenders	Product was given to pet for about 1 year. Pet developed symptoms in Feb 2017 of Fanconi syndrome	4.5	Years	Maltese	Dog	10.6	Pound
<a href="#">EON-313150</a>	5/2/2017 9:40	Purina Cat Chow Indoor	The cat ate this food and several hours later ( overnight) regurgitated it. I gave him wet food instead the next few days. When i switched back to the dry food, he regurgitated it again this morning. He had been eating it for a week or so total - he's not eating fast and he's otherwise acting normal/healthy.	3	Years	American Shorthair	Cat	14	Pound
